THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 37] JANUARY, 1937 [NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

Employment at the beginning of December, 1936, showed a seasonal recession, which was the first general decline indicated since April 1. The reduction was decidedly smaller than the average contraction indicated between November 1 and December 1 in the experience of the years since 1920, and the situation continued decidedly more favourable than in any month of the years, 1931-1935. The Dominion Bureau of Statistics tabulated reports from 10,106 employers, whose payrolls were reduced from 1,053,548 at the beginning of November to 1,044,969 at December 1, 1936. The index (average 1926=100) declined from 111·0 at the former date to 110·1 at December 1, as compared with 104·6 at the same date in 1935. At December 1 in preceding years, the index was as follows:—1934, 98·9; 1933, 91·8; 1932, 83·2; 1931, 99·1; 1930, 108·5; 1929, 119·1; 1928, 116·7; 1927, 108·1; 1926, 102·3; 1925, 96·5; 1924, 91·9; 1923, 96·9; 1922, 96·3 and 1921, 88·3.

At the beginning of December, 1936, the unemployment percentage among local trade Unions throughout Canada stood at 12·7 in contrast with 11·0 per cent in November and 13·3 per cent in December, 1935. The December percentage was based on the reports furnished to the Department by 1,821 labour organizations comprising a membership of 182,688 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada showed an increase in the work transacted during November, 1936, when a comparison was made with the average daily placements effected during October, 1936, and also with those reported during the corresponding month a year ago, the marked change in the first instance being a heavy loss recorded in services and in the second, a noteworthy gain registered in farming and a pronounced decline in construction and maintenance. Vacancies in November, 1936, numbered 33,522, applications 65,556, and placements in regular and casual employment 31,347.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $16.99 at the beginning of December as compared with $16.96 for November; $16.65 for December, 1935; $16.02 for December, 1934; $15.41 for June, 1933 (the low point in recent years); and $22.11 for December, 1929. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 80·8 for the week ended January 1, 1937, as compared with 80·2 the previous week, 77·4 for the week ended December 4, 1936, and 72·8 for the week ended January 3, 1936. The increase during December was due in large part to higher prices for grains, live stock and non-ferrous metals. On a monthly basis the index number was 77·2 for November; 72·7 for December, 1935; 71·1 for December, 1934; 63·5 for February, 1933 (the low point in recent years) and 96·0 for December, 1929.

The latest statistics available reflecting industrial conditions in Canada are given in the table on page 2. The index of the physical volume of business in November continued at about the same level as in October, the figures for these two months indicating the highest level of business activity since January, 1930. The advance in the index between November, 1935, and November 1936, was about nine per cent. Of the principal factors used in the construction of this index, that used to indicate mineral production was substantially lower in November than in October, mainly because of lower exports of copper and zinc, decreased shipments of gold and lower coal production which more than offset increased exports of nickel and asbestos and increased imports of bauxite. Electric power output also was considerably lower than in the previous month with smaller decreases in trade

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended January 1, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending December 26, 1936, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending November 28, October 31, and October 3, 1936; November 30, November 2, and October 5, 1935.

(7) MacLean's Building Review.

employment, carloadings and in exports. Manufacturing, construction and imports were higher. All of the above mentioned principal factors were higher in November, 1936, than in November, 1935. Information available for December shows continued advance in wholesale prices, while employment, carloadings and contracts awarded were lower than in November but higher than in December, 1935.

During December there were on record twenty strikes and lockouts, involving 3,137 workers, with a time loss of 15,917 man working days, as compared with fourteen disputes in November involving 1,264 workers with a time loss of 11,327 days. In December, 1935, there were eight disputes involving 431 workers, causing time loss of 3,152 days. In December, 1936, four cotton factory strikes caused a considerable part of the time loss. In November the important disputes included strikes of coal miners at Cadomin, Alta., and fur workers at Winnipeg, Man., the latter continuing throughout December. Of the twenty disputes recorded for December, sixteen were recorded as terminated, seven resulting in favour of the employers involved, two in favour of the workers affected, compromise settlements being reached in six cases while the result of one dispute was recorded as indefinite. Four disputes, involving approximately 1,370 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Industrial Disputes Investigation Act

During the past month the Department has received a report from the Board of Conciliation and Investigation appointed to investigate the matter of a dispute between Cadomin Coal Company, Limited, and certain of its employees. The text of the Board report appears on page 9.

Supplements published with this issue of Labour Gazette

Two supplements will appear shortly after this issue of the LABOUR GAZETTE, continuing the series on wages and on prices issued annually in January in recent years. The first is the twentieth report in the "Wages and Hours of Labour" series giving information as to the year 1936, with comparative figures for 1935 and earlier years, and showing the wages and working hours of the principal classes of labour throughout the Dominion in various industries. The second supplement deals with the movement in retail and wholesale prices in Canada in 1936 and previous years; tables are also given showing the movement of prices in other countries throughout the world.

"The National Attack on Unemployment"

In this issue, commencing on page 25, there appears a summary of an address entitled "The National Attack on Unemployment," which was given recently by the Hon. Norman McL. Rogers, Minister of Labour in Toronto before the Canadian Club.

There is also presented, a summary of an address made by Mr. Arthur B. Purvis, Chairman of the National Employment Commission, before the Canadian Club in Montreal.

An Appreciation of Relief as Related to Economic and Employment Indices in Canada

On page 30 of this issue, there is an informative article entitled "An Appreciation of Relief as Related to Economic and Employment Tendencies in Canada." The article which was prepared by J. K. Houston, Statistician, Dominion Unemployment Relief, Department of Labour, is an analysis of some of the factors tending to prevent a greater decrease in the number on relief, notwithstanding the apparent paradox of improved business and employment conditions.

Canadian Railway Shops Resume Forty Hour Week

On December 21 the President of the Canadian National Railways announced that commencing January 1, 1937, the main shops on the system would resume work on the forty hour week basis and that this would affect 7,500 men and increase their working time by an average of twenty per cent. In recent years, especially since 1932, the shopmen have been working short time but since 1933 the working time has been somewhat increased at various periods. The agreement for the shopmen provides that in the main shops the hours per week are forty or forty-four, so that these shops are being put on practically full time.

An amendment to the agreement in November, 1934, provided that there should be a change in the deduction from earnings, viz:—ten per cent after April 1, 1935, for employees working 40 hours per week or

more, and five per cent for those working less than 40 hours per week (LABOUR GAZETTE, November, 1934, pp. 991-2). A proposal of the railway employees, under agreements, for the cancellation of the deduction is before a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act.

Early in January, it was reported that the Canadian Pacific Railway's main shops in Montreal with 4,500 men employed, had resumed the 40 hour week.

Some weeks ago the shops in Canada, of the Michigan Central and the Pere Marquette railways began to work full time.

Wage Increases in Canadian Textile Industry

The *Canadian Textile Journal* of December 11, 1936, contains an announcement of wage increases by several of the larger textile industries. The companies specifically mentioned are the Wabasso Cotton Company Limited with a 10 per cent wage increase, the Dominion Textile Company with increases ranging up to 7 per cent, and the Canadian Cottons Limited with an increase of 6 per cent.

According to a public statement issued by the Dominion Textile Company, the recent increases "will restore wages in the Mills generally to the levels prevailing prior to April 10, 1933. At that date a general 10 per cent reduction was made, and was the first change in the Company's general wage levels since an upward revision of approximately 12½ per cent which took place in 1923. On April 2, 1934, a portion of the previous year's reduction was restored, and the present change, helps to complete the restoration to the former levels."

It was added that these wage increases will mean an addition of approximately $250,000 in workers' wages over the next year if the mills are operated close to capacity.

The *Textile Journal* observes that these advances are made possible by the general improvement in business conditions as reflected in the large volume of orders on the books of the cotton companies at the present.

Minimum Wages for taxicab drivers in Edmonton and Calgary

"The Alberta Gazette" of December 31, 1936, contains an order of the Highway Traffic Board regulating the wages of drivers of public service vehicles. The order provides that "any owner of a Public Service Vehicle operated as a taxicab or livery for the transportation of passengers within the corporate boundaries of the cities of Edmonton and Calgary, shall pay any driver in his employ not less than the following minimum wages:

(*a*) To a driver employed by the week, $15 per week for a week of six days.

(*b*) To a driver employed otherwise than by the week not less than at the rate prescribed in paragraph (*a*)."

The order was to become effective "on and from December 15, 1936."

Ontario Municipalities Relieved of costs of pensions and Mothers' Allowances

Hon. David Croll, Ontario Minister of Welfare and Municipal Affairs, announced on January 6, that effective January 1, 1937, the Ontario Government would assume the entire cost of mothers' allowances in the province as well as taking over the municipal share of the cost of old age pensions. (Previous to this announcement, the cost of old age pensions was on a divided basis with the Dominion Government paying 75 per cent; the province 15 per cent and the municipalities 10 per cent, while Mothers' allowances were paid on an equal basis as between the province and the municipality).

Legislation will be enacted to provide for the change being made retroactive to January 1.

Hon. Mr. Croll's reported statement was in part as follows:—

"Nine hundred and thirty-five municipalities will immediately benefit by the change. The other five will be adversely affected for the moment but with the present steady increase in mothers' allowances beneficiaries and old age pensioners, costs jumped $1,000,000 a year when we extended the scope of the Mothers' Allowances Act to include mothers with only one child—there is no doubt that during 1938 and thereafter they, too, will benefit from our present decision.

"We expect local mothers' allowances and old age pensions boards to continue to play a prominent part in future administration.

"We consider that the new policy is based on sound principle. It expressed our belief that the wealthy—the income taxpayers—should bear as far as possible the cost of the social services. We also want to lift a bit of the burden from the hard-pressed municipalities, so that they in turn may reduce taxation on real estate. The rural municipalities, I believe, will especially benefit."

Arrangements respecting continuance of Federal Grants-in-Aid

The following announcement respecting Federal Grants-in-aid to the Provinces was made on December 30, 1936, by the Hon. Norman McLeod Rogers, Minister of Labour:—

"It has been decided to maintain the present grants-in-aid to the provinces for the midwinter months of January, February and March. To avoid future misunderstanding, however, it can be stated now that it will be the policy of the Dominion Government to make progressive reductions in the grants-in-aid to the provinces during the coming year. As in the past year, the revision of the grants will follow a quarterly review of employment conditions throughout the Dominion. Special care will be taken to see that the grants are readjusted in accordance with the changing situation created by varying degrees of business improvement in the several provinces.

"The Dominion Government does not interfere directly in the financial arrangements made by the provincial governments with the municipalities. It is important, however, to make it clear at this time that the grants to the provinces will only be continued on their present basis for the months of January, February and March. With the clear indication of an expanding business recovery during the coming year, there is reason to anticipate that the federal government, provincial governments and municipalities will be able to reduce relief expenditures.

"The Dominion Government has shared in the growing burden of relief during the years of depression. Only a year ago it increased its grants-in-aid to the provinces by 75 per cent for the winter months, in order that the provinces in turn might relieve the financial pressure on the municipalities. Even with subsequent reductions, the Dominion Government has been carrying a substantial share of the direct relief burden in all provinces, apart from its large contribution to relief works. With the acceleration of business recovery it will be the policy of the Dominion Government to share in the reduction of relief expenditures, while continuing to co-operate with the provinces in constructive measures to re-establish able-bodied unemployed who are now on relief. In its policies and decisions, the Dominion Government will act upon the principle that, as a country, we shall only make headway in reducing relief rolls when all governments work together on a basis of joint responsibility and united effort."

Workmen's compensation in Canada

A comparison of provincial workmen's compensation laws in Canada in 1936, has recently been published in mimeograph form by the Dominion Department of Labour. This survey, which was prepared by Miss Margaret Mackintosh, Librarian, Department of Labour, constitutes a cross section of compensation legislation throughout Canada, revealing in its analysis the chief provisions of the various enactments in regard to administration, scope, liability, risks covered, industrial diseases, medical aid, scale of compensation, etc.

New Year's Messages of Canadian labour leaders

Canadian labour leaders, in New Year's messages, in industrial conditions surveyed the progress made during 1936, and expressed their views on prospective developments during the future.

Mr. P. M. Draper, president of the Trades and Labour Congress of Canada, after commenting on the improvement in the level of employment, stated that "since this depression began wage standards in many Canadian industries have crumbled. This situation is bad for the present, and promises even worse for future. Even though at work, in too many employments, wages are not sufficient to decently maintain a man and his family. One result is the not uncommon spectacle of an employed man seeking public relief to assist his too meagre earnings. A second result is the necessity for immediate relief should his employment cease." Discussing the right of wage earners to join trade unions, Mr. Draper said that "true, no legal barrier exists to wage earners joining a union, but in some cases the attitude of industry has been successful in blocking the efforts of their employees—and invariably these are the industries where low wages are paid." Continuing, he added, that the "trade union movement looks forward in 1937 with some hope that legal recognition of this right to organize may be won in Canada, to the benefit of employees in low wage industries."

Mr. A. R. Mosher, President of the All-Canadian Congress of Labour, expressed the hope "that the spirit of goodwill and generosity which prevails during this season, and is so manifest among all classes of Canadians, will make a deep impression upon their hearts and minds." Dealing with the desirability for an increased standard of living, Mr. Mosher said that "until a high standard of living is attained, and Canadians are housed in comfortable homes, much work will be required, for the building industry has lagged behind during the

years of the depression. But the day has come when it is utterly unreasonable that some workers should be forced to toil for twelve hours a day while many thousands of would-be workers cannot find work of any kind to do." Mr. Mosher referred to the recent improvements in business which he considered indicated "that we are about to enter another period when the evils of the depression years will be mitigated to some extent at least. Let us use that breathing-spell" he said "to ensure that the country will not again enter the trough of another depression worse than the last."

Mr. W. T. Burford, Secretary-Treasurer of the Canadian Federation of Labour, declared that "union men and women increasingly recognize their own responsibility as citizens to resist the subversive influences which in most of Europe have led the labour movement to destruction and deprived the people of many countries of their democratic institutions." Concluding the Federation's message on a note of confidence. Mr. Burford observed that "the Canadian Federation of Labour is confident that the New Year will see a continuance of the steady advance to better conditions which the improved economic situation has at last made practicable."

Mr. Alfred Charpentier, President of the Confederation of Catholic Workers of Canada, in his Christmas and New Year message, declared that unity in Christian fraternity offers the sole means of bringing back peace and happiness. He urged all employers and workers, to extend to the social-economic field that spirit of friendship and faternity so common during the holiday-season. Mr. Charpentier warned the working classes against the deceiving theories, of certain forms of camouflaged Communism, and recommended as "the remedy to our present ills co-operative action leading to a Christian social front which will save our people from ruin."

Absorption of unemployed into industry in Great Britain

The British *Ministry of Labour Gazette* for December, 1936, summarizes the report to Parliament of the discussions that have taken place between the Minister of Labour and industrial representatives on the absorption of the unemployed into industry.

The inquiry was initiated in November, 1934, following an announcement in the House of Commons by the Minister of Labour that he had invited the National Confederation of Employers' Organizations and the Trades Union Congress General Council to a discussion on the general question of the conditions of employment and hours of work in particular industries with reference to the problem of unemployment. At that time he suggested that the problem be considered along the following lines:

(*a*) The extent to which existing vacancies cannot be filled owing to the geographical distribution of the unemployed and inability to secure workpeople of the kind required when vacancies exist.

(*b*) The actual or potential shortage of trained workpeople and the steps being taken or required for remedying this position, both as regards the present and the future;

(*c*) The extent to which, for other reasons, such as age or physical fitness, vacancies have not been filled;

(*d*) The determination of the effective labour supply amongst the unemployed nominally attached to various industries;

(*e*) The possibility of increasing the number employed by reducing the hours of work, limitation of overtime, rotation of shifts, standing-off at intervals, or by regular holidays, and the probable effects on wages and costs of such measures;

(*f*) Special problems affecting the employment of women and juveniles, including the question of the age of recruitment in the various industries.

Consultations with the representatives of certain industries followed, and the report summarizes the subjects into three main groups:—(*a*) questions relating to the personnel of the industry, its labour supply and demand, and the employment of juveniles and apprentices; (*b*) questions relating to the reduction of working hours and its probable effects on competition both at home and overseas; (*c*) questions concerning the working of overtime, and the possibility of avoiding it by the engagement of additional staff.

Featuring the discussions was the importance attached by various employers' organizations to the existence of voluntary joint machinery for the conclusion of collective agreements with the trade unions.

The report concludes by pointing out that the general industrial situation had altered since the initiation of the discussions, as a result of the fall of over 700,000 in the unemployed register, and the increased demand for labour in certain industries consequent upon the rearmament program. Nevertheless, the Minister was satisfied that a valuable body of industry information had been made available for the formation of Government policy, and the responsibilities of industry itself in regard to the problem of the absorption of the unemployed had been brought into prominence.

Wage increases recommended for wool textile industry in Great Britain

Early last fall, a Board of Inquiry was appointed by the Minister of Labour (Great Britain) to inquire into wages and working conditions in the wool textile industry (except wool combing) in Yorkshire. This Board has now made its report, and according to a summary of its contents appearing in the British *Ministry of Labour Gazette*, for December, wages increases have been recommended. Dealing with these, the *Gazette* observes that after reviewing the arguments presented and the factors involved, the Board "expressed the view that the industry has recovered sufficiently to be able to stand some rise in wages." Consequently it recommended that the base rates be subject to an addition of 10 per cent (with certain modifications in the case of juvenile workers), and that the "cost-of-living wage" remain at the figures now operative in the case of the majority of the employees, viz., 52 per cent for time workers, 45·76 per cent for piece-workers, and 39·52 per cent for pressers and blanket raisers.

The following paragraphs, condensed from the *Ministry of Labour Gazette*, indicate the effect of the recommendations:

A general flat rate of 1d. an hour in addition to the scheduled day-rate wages is recommended for night workers, together with a specific wage for those night workers for whom there are no such scheduled day-rates. With regard to the regulation of piece-work prices, the Board recommends that endeavours should be made to establish uniform district standard piece price lists so far as possible; that where no such lists are in operation piece-work prices should be such as will enable an operative of average ability to earn under normal conditions at least 25 per cent over the appropriate basis time rate, except in the case of weavers, for whom it is recommended that the procedure for regular piece-work prices laid down in a previous award of the Court of Arbitration should be revived; and that the existing addition of 15·625 per cent to piece-work base rates in respect of the reduction of working hours in 1919 from 55½ to 48 per week should be retained.

In place of the present overtime rates of 1d. an hour for women and young persons and 1½d. an hour for men, the Board recommends that time workers be paid time and a quarter for the first two hours and time and a half thereafter, and that piece-workers be paid 3d. an hour for the first two hours and 6d. an hour thereafter in the case of men, and 2d. an hour for the first two hours and 4d. an hour thereafter in the case of females and of male workers under 21 years of age. For women and young persons it is recommended that overtime beyond the 48 hours ordinary time be allowed up to six hours in the week and up to 96 hours in the year, but that the present system of allowing overtime beyond these limits by special permits be abolished.

Social legislation forecasted in the United States

From recent forecasts made in the press, it would appear that concerted efforts are to be made during the present year toward the abolition of child labour in the United States. One source disclosed that President Roosevelt had conferred with United States administration leaders on a tentative plan with that objective in view as well as the shortening of working hours and raising wages.

On January 8, President Roosevelt appealed for speedy ratification of the child labour amendment, indicating that favourable action by twelve of the States would give Congress power to regulate or prohibit the labour of persons under eighteen years of age.

A conference was also reported as being held between Miss Frances Perkins, Secretary of Labour and 68 representative union leaders. The tentative program drafted is understood to have included: Promotion of new housing legislation; new maximum hour statutes; abolition of child labour; initiation of federal standards of minimum wages; and government co-operation with organized labour and management to stabilize employment.

Statutes of Unemployment in Germany

According to the *Statist* for December 5, 1936, the number of unemployed registered at the labour exchanges in Germany amounted to 1,076,000, on October 31, 1936. The Reich Office for Labour Exchanges published, for the first time, particulars regarding these unemployed, which explains, to some extent the fact of the existence of a still considerable volume of unemployment despite an alleged scarcity of labour in numerous branches of trade and industry. The above-mentioned figure comprised 582,000 skilled workers, 161,000 employees and 333,000 unskilled labourers. In all three groups applicants were included whose qualifications for work was limited to one-third of the normal standard by bodily disablement, failing health, old age or other reasons; 99,000, or 16·9 per cent, fell under this heading in the first group, 26,000, or 16·3 per cent in the second group, and 112,000, or 33·6 per cent in the third group, the large percentage in this latter group being due to the past crisis, which compelled numerous workers and clerks to

change permanently into the class of unskilled labour. Further deduction of individuals no longer fully qualified for their special calling reduced the available number of unemployed skilled workers to 411,000 and that of employees to 113,000. But only a fraction of the remaining fully qualified unemployed could accept work distant from their place of residence owing to family conditions, the owning of real property, etc. The Reich Office estimated the number of those free to take work elsewhere at 162,000, or 27·8 per cent, in the case of skilled workers, at 46,000, or 28·4 per cent, in that of employees; and at 71,000, or 21·4 per cent, in the case of unskilled labour.

"Governmental protection of labour's right to organize"

"Governmental protection of Labour's Right to Organize" is the title of Bulletin No. 1, published by the National Labour Relations' Board of the United States. This bulletin is a summary of evidence introduced at a hearing before the Board bearing upon the factual basis of the National Labour Relations Act (LABOUR GAZETTE, July, 1935, page 605; April, 1935, page 343, and previous issues) and "the reasonableness of the regulations embodied therein."

Part I of the bulletin, based on the experience and opinions of experts, is an informative exposition of modern industrial relations, and some idea of the comprehensive nature of the study is indicated in its main divisions and sub-divisions as follows:

I. Unsettled labour relations resulting from denial of the right of employees to organize and to bargain collectively—(*a*) inequality of bargaining power between employers and employees; (*b*) recurrent periods of widespread industrial strife resulting from the denial of the right to organize and bargain collectively; (*c*) effect of strikes upon commerce; (*d*) unfair labour practices leading to industrial strife.

II. Satisfactory experience with collective bargaining—(*a*) in general; (*b*) in the printing industry; (*c*) in the garment industry; (*d*) in the petroleum industry; (*e*) in the bituminous coal mining industry; (*f*) in the railroad industry; (*g*) union-management co-operation.

III. History of government intervention in labour disputes:—(*a*) types of federal intervention; (*b*) intervention by injunction; (*c*) intervention by use of federal troops; (*d*) intervention by the appointment of deputy marshals; (*e*) Presidential intervention (by separate administrations); (*f*) special federal agencies for intervention in labour disputes.

IV. Employer-labour policies nationally determined.

V. Steel—an example of modern industrial integration.

Part II consists of statistical material, tables, and charts introduced as exhibits.

Survey of collective agreements by I.L.O.

In continuation of its series of "Studies and Reports," the International Labour Office at Geneva has recently published the results of a comprehensive survey entitled "Collective Agreements."

As explained in the introduction, this study resulted from a decision of the 69th session of the Governing Body in January, 1935, to submit to the International Labour Conference a report on collective bargaining.

According to this decision the report to be prepared by the Office was intended not to provide the necessary background of information for the drafting of a Convention or Recommendation in the traditional manner, but rather to give a general survey of the main aspects of the problem on which the discussion might concentrate.

With this end in view, the report has been divided into four parts.

The first deals with the practical problem, and the part played by collective agreements or similar regulations in different countries and in various industries is analysed.

The second part is devoted to the legal aspect of the problem; the various methods of regulating conditions of employment collectively and the effects of such regulation.

In the third part the social and economic problem is analysed and the place of collective agreements in the economic system is examined.

The fourth part deals with the possibilities that collective agreements offer, in conjunction with national labour legislation, of facilitating the ratification and application of International Labour Conventions.

The conclusions of the report suggest certain problems specially suitable for discussion, and possibly for action at some future date, by the International Labour Organization.

In a review of the work of the Montreal Unemployment Relief Commission, contained in an address given by Brigadier General E. de B. Panet, before the City Improvement League on December 20, the following recommendations were made: Medical aid for the unemployed; Employment of unemployed for snow removal and street and park maintenance; Identification card to be made obligatory for all citizens of Canada; Control of direct relief by either the Federal or Provincial Governments; Improvement of employment offices.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

A Board of Conciliation and Investigation, under the provisions of the Industrial Disputes Investigation Act, was established by the Minister of Labour towards the close of December to deal with a dispute between the Canadian National Railways and its clerks and other classes of employees being members of the Canadian Brotherhood of Railway Employees (LABOUR GAZETTE, November, 1936, page 980). Members thereof were appointed as follows: on the company's recommendation, Mr. W. Sanford Evans, of Winnipeg, Manitoba, and on the employees' recommendation, Mr. Howard S. Ross, K.C., of Montreal. Messrs. Evans and Ross will confer looking to a joint recommendation for third member who will be chairman of the Board. The dispute was caused by the request of the employees, 10,000 in number, for restoration of the basic rates of pay, involving discontinuance of the existing wage deduction of 10 per cent.

It was reported in the August (1936) issue of the LABOUR GAZETTE, page 682, that an application for a Board of Conciliation and Investigation had been submitted by certain employees of the Canadian National Railways, being sleeping car conductors, members of the Order of Railway Conductors. The dispute concerned the desire of 47 employees to be represented by the organization of their choice. As the application does not meet the requirements of the Industrial Disputes Investigation Act in certain respects, no action has been taken looking to the establishment of a Conciliation Board in this case.

In the October issue of the LABOUR GAZETTE, page 860 (1936), reference was made to the receipt in the Department of Labour of an application for the establishment of a Board of Conciliation and Investigation to deal with a dispute concerning wages and working conditions between the Canada Steamship Lines, Limited, at Windsor, Ontario, and seventy freight handlers being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. On October 13 a two-hour conference was held in the offices of the Department of Labour at Ottawa between officials of the Canada Steamship Lines and the Vice-President of the employees' organization, at which the Deputy Minister and Chief Conciliation Officer of the Department of Labour were present. The company, however, was unwilling to enter into an agreement of any kind, and in their statement, which was subsequently submitted in reply to the application, claimed that the application was defective at certain points. No Board has been established, the applicants having failed to show that a majority of the employees of the Canada Steamship Lines at Windsor are in favour of the establishment of a Board.

Report of Board in Dispute Between Cadomin Coal Company, Limited, and certain of its Employees

A unanimous report was received by the Minister of Labour on January 4 from the Board of Conciliation and Investigation established to deal with a dispute between the Cadomin Coal Company, Limited, at Cadomin, Alberta, and its employees being members of Cadomin Local Union No. 7296, United Mine Workers of America. The personnel of the Board was as follows: Dr. Alan E. Cameron, Professor of Mining Engineering in the Faculty of Applied Science, University of Alberta, Edmonton, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Mr. George Kellock, of Coleman, Alberta, nominated by the company, and Mr. Angus J. Morrison, of Calgary, Alberta, nominated by the employees. The dispute related to the interpretation of a clause in the wage agreement entered into on April 1, 1936, providing for equalization of work for the miners. Approximately 350 men were directly affected by the controversy. The text of the Board's report follows:—

Report of Board

In the matter of the dispute between the Cadomin Coal Company Limited and certain of its employees being members of Cadomin Local Union No. 7296, United Mine Workers of America, the Board of Conciliation and Investigation consisting of Messrs. George Kellock of Coleman, Alberta, Angus J. Morrison of Calgary, Alberta, and Alan E. Cameron of Edmonton, Alberta (chairman), appointed by the Honourable the Minister of Labour, under authority of the Industrial Disputes Investigation Act, R.S.C., 1927, ch. 112, after holding meetings in Cadomin, Calgary, and Edmonton, Alberta, and after taking evidence from many witnesses for the employees and many witnesses for the Company, reports as follows:—

A. Cause of the Dispute

1. The dispute hinged on the interpretation of clause 5 of the general agreement between the Company and its employees, which clause reads as follows:—

"Without the Company abrogating its rights under the terms of the general clauses of the contract, the Company, in so far as practicable agrees to change all development and pillar men every six weeks with the object of providing equal work."

2. The employees take the viewpoint that this clause requires the Company to distribute various kinds of work among the employees in such a manner that equal work results for all. They claim that although the Company wrote this clause into the agreement and had carried out the spirit and letter of the clause in its relationship with the employees for many years until the year 1936, when without official warning to or negotiation with the employees as party to the contract, it disregarded the terms of the written agreement.

3. The Company takes the viewpoint that this clause must be taken in conjunction with clause 2 in the general agreement, which reads, in part, as follows:—

"The right to hire and discharge, the Management of the Mine and the direction of the working forces are vested exclusively in the Company. The first party shall not abridge this right."

The Company claims that within the limitations set by clause 2 of the general agreement, by the words "in so far as practicable" in clause 5, and by the Coal Miners' Regulation Act, Legislative Assembly of the Province of Alberta, 1930, ch. 5, it has lived up to its contract with the employees.

4. Specifically, the dispute involves the procedure of distributing among the employees two classes of shift work, development work and pillar work, in one section of the company's working, viz., panel No. 2 of the Shaft Mine.

B. Summary of Evidence

1. *Physical Aspects as shown by the plans and workings:*

The Cadomin Coal Company is mining coal from a steeply pitching, thick seam of coal by what are virtually two separate mines. The upper or "Rock Tunnel" Mine extracts the coal from the upper portion of the seam, i.e., those portions which extend above the water level of the MacLeod River. The lower or "Shaft" Mine extracts the coal from the seam below the old, abandoned workings of the Rock Tunnel Mine. Coal winning operations in both mines are conducted in essentially the same manner. The seam is blocked off into "panels," each panel being essentially independent of the others. A panel is "developed" by driving narrow entries (angles and back angles) in a regular form to cut the block of coal into a series of pillars, each containing a more or less uniform quantity of coal. Once the panel has been fully developed, the pillar coal is extracted by shooting or undercutting and is allowed to run through the angles and back angles to the bottom of the panel where it is collected in cars and sent to the surface. Development work is closely confined narrow work and tonnage of coal per shift is not high. Pillar work, although somewhat more risky, is less arduous and yields high tonnage per shift.

As wages per shift depend quite largely upon tonnage of coal won, pillar work is appreciably more remunerative per shift than development work. Distribution of the two kinds of work among the miners is necessary to give reasonable equality of income.

Although the two mines have the same general methods of mining, there are certain distinct differences in the nature and risk of the work.

Panels in the Rock Tunnel mine break through to the surface during development work and closure of and control of the "gob" or roof conditions following pillar coal extraction are relatively easy. Gas in the coal also readily finds its way to the surface and does not unduly contaminate the mine air.

Panel development and operation in the shaft mine is still experimental. Only two panels have been opened. No. 1 panel was laid out and developed in such a way as to leave a barrier of coal 200 feet thick, between the top of the panel and the abandoned workings in the Rock Tunnel mine above. When pillar extraction commenced in this panel, coal from the barrier ran out to the cavity left by the pillar coal removal and a cavity formed through the barrier pillar to the old workings. Gas escaping in this channel was ignited by fire in the old workings and a series of explosions occurred. Fire backed into the pillar workings of the panel and the panel had to be sealed off and abandoned.

In December, 1935, development work was started in panel No. 2 of the Shaft mine. This panel was laid out with a barrier of coal 300 feet thick between the future top of the panel and the old workings of the Rock Tunnel mine above. The panel was fully developed by June, 1936, and pillar coal drawing commenced. On October 5, 1936, a large cave opened on the surface above No. 2 panel indicating that the 300-foot barrier had failed. No explosion occurred with this cave but the gas content of the mine air dropped to less than half its former figure clearly indicating that the cave had greatly released the gas pressure in the pillar work of No. 2 panel.

Gas coming from the coal in the Shaft mine has always been greatly in excess of that coming from the coal in the Rock Tunnel mine.

2. *The Employees' Argument:*

(*a*) Although the Company agreed to change all development work and pillar men every six weeks with object of providing equal work, it has had the same men in the shaft mine continuously since panel No. 2 was started (December, 1935), and has not distributed pillar work in the Shaft mine among other miners in the Rock Tunnel mine.

(*b*) There was rotation of work in No. 1 panel of Shaft mine, and therefore there is no reason for not rotating work in 2nd panel.

(*c*) Although the Company claimed only specially trained, experienced workmen could be used in the Shaft mine, nevertheless they used inexperienced men in that mine.

(*d*) Most of, if not all, the miners at Cadomin are capable of working in the Shaft mine. There are no particular qualifications required as the methods of mining, driving development angles or drawing pillars are generally or essentially the same as in the Rock Tunnel mine.

(*e*) On resumption of work following the strike in October and November, the Company took 25 men from the Rock Tunnel mine and put them to work at pillar work in No. 2 panel of the Shaft mine. These men all came from No. 6 (or partly No. 6 and partly No. 7) panel of Rock Tunnel mine and were not especially selected from the miners of the Rock Tunnel mine. If 25 out of 40 men of the Rock Tunnel mine are capable of work in the Shaft mine then surely the Rock Tunnel mine men should be rotated with Shaft mine men in a distribution of work among the miners to provide equal work.

(*f*) When asked to start rotation of work (pillar work) in the Shaft mine with miners from the Rock Tunnel mine, officials first evaded the question by asking the miners to wait until certain development work was completed, and then gave an arbitrary negative decision without explanation.

(*g*) The Company did not distribute shifts of work uniformly between Rock Tunnel and Shaft mines as shown by the records of shifts of work by their representative.

(*h*) The Company has not given equal distribution of work, either as shifts of work or as types of work (development and pillar) among the miners of Cadomin as a whole, so that there has been differences in the amount of work available for different men with consequent unequal returns to the men.

(*i*) The employees claim these inequalities are contrary to the contract, and are the cause of the dispute.

3. *The Company's Argument:*

(*a*) The Company agreed to change all development and pillar men every 6 weeks with the object of providing equal work, only when such changes will not endanger the miners or the mine in any way.

(*b*) It is no more costly from a viewpoint of mine output to make changes in distribution of men every 6 weeks and the Company has done so whenever it was feasible from the viewpoint of safety to miners and the mine.

(*c*) There are many more miners in Cadomin who are capable of working on the Shaft mine than there are working places for them, but the mining problem in the Shaft mine up to October 5 required the same men at the same jobs to assure safety of the miners and the mine.

(*d*) Panel No. 1 of Shaft mine was the first attempt at extracting coal from this section. The mining problems looked the same as in the Rock Tunnel mine and distribution of miners was applied as in the Rock Tunnel mine. Development work preceded pillar extraction by some time and when pillar work got under way, the panel "ran away," caused explosion, and showed the method adopted would not work.

(*e*) Panel No. 2 was developed by angles and back angles as is the recognized procedure; but detail of layout and plans for subsequent pillar work was given a great deal of thought and consideration by the staff and the District Inspector of Mines before a method was finally decided. It was still an experiment. Officials therefore decided that this work must be done entirely by one crew who would thus know the full experience of the panel. There would, of course, be changes in personnel from time to time but these would be selected men and would stay on the job as long as they cared to.

(*f*) Development work on panel 2 was started in December, 1935. Pillar extraction commenced in June, 1936, and proceeded until October 23 without more than necessary changes in personnel. New men added were kept on the work because roof action following coal extraction was not certain. Officials had to refuse the request of the employees for distribution of this pillar work after June 15, until they were reasonably sure that periodic changes in operating personnel would not increase the dangers to miners and the mine. The District Inspector of Mines agreed with this decision.

(*g*) Panel No. 2 carried to the surface on October 5 without explosion and thus eliminated much of the danger in working No. 2 panel, allowing of increased production and use of more of the men from the Rock Tunnel mine.

(*h*) During the strike, No. 6 panel of the Rock Tunnel mine caught fire and had to be abandoned. Men in that panel were thrown out of work and production from that panel was lost. Both to give employment to the miners of No. 6 panel, and to compensate for lost production from No. 6 panel, a sufficient number of these men were put to work in panel No. 2 Shaft mine. Not all of the men were needed, but of those placed in No. 2 panel, not all came from No. 6 panel. Some were selected from No. 7 panel. Selection of miners for the Shaft mine is still considered necessary, though not to the same extent as before the cave on October 5.

The balance of miners from No. 6 panel have been distributed in so far as is possible and all are now at work.

(*i*) The Company submitted a summary of wages paid from January 1 to October 22, 1936, to show that there has been reasonably good distribution of income throughout the operations of the Company.

(*j*) The Company claims that this evidence shows that it has fulfilled clause 5 of the contract in so far as safety of the miners and the mine would allow.

C. FINDINGS OF THE BOARD

1. It is clear that the Company considers that it has a definite mining problem to solve in the Shaft mine. There is uncertainty as to how the roof or gob will act in each individual panel. In each panel developed in the Shaft mine the same uncertainty will hold until roof conditions stabilize during pillar extraction.

2. The Company is fully justified in exerting all possible precautions in each panel until it knows that the situation is reasonably safe.

The result of the precautions taken in regard to No. 2 panel Shaft mine are clearly evident in the fact that no lives have been lost and no major accidents have occurred in the panel to date.

3. The tabulation of shifts and earnings submitted by the Company shows that over the period January 1 to October 22, 1936, the Shaft mine employed 28·6 per cent (34 out of 119) of the miners of Cadomin. These men worked 33·1 per cent (6,035 shifts out of 18,239) of the total shifts worked and received 36·3 per cent ($66,335.82 out of $182,853.80) of the earnings.

4. Figures submitted by the employees show that during the period April 1 to October 24, 1936, the miners working in the Shaft mine worked 56·3 per cent of the total shifts. Over this shorter period the percentage of the total earnings received by the miners in the Shaft mine would be correspondingly greater.

5. There was some justification for the complaint made by the miners that shifts of work were not being distributed according to the contract.

6. The Board believes that the Company was actuated only by safety considerations in arriving at its conclusions and decisions and the selecting of the men for the panel where the dispute originated.

The miners, on the other hand, felt that there was a violation of Clause 5, in their agreement when the work in the panel in question was not distributed and they drew the attention of the Management to this condition in the hope that a more aggravated condition would not develop.

The Board has come to the conclusion after hearing the evidence, that a mutual understanding has now been reached in connection with this division of work that will be satisfactory to both parties. The Company has intimated its intention of distributing the work so far as it is practical to do so.

The Board also finds, as was intimated in the evidence by the employees, that there is no desire or intention on the part of the Officers of the Cadomin Local Union or any members of its committees to interfere with the management of the mine and the direction of the working forces.

D. RECOMMENDATIONS OF THE BOARD

The Board recommends:

1. That the practice established over a period of years at Cadomin of changing development and pillar men, as provided by the joint agreement, with the object of providing equal work among the miners of Cadomin, should be continued and that the distribution of shifts should be such that over a twelve months' period, income of the individual miners should be equalized as far as practicable.

2. That in periods of mine operation when unusual hazards of coal extraction may require discretion to be used by the Mine Management, that due regard be extended by the Employees to the difficulties and responsibilities of the Mine Management.

Signed at Calgary, Alberta, 29th day of December, 1936.

(Sgd.) ALAN E. CAMERON,
Chairman.

(Sgd.) A. J. MORRISON,
Board Member nominated by the employees.

(Sgd.) G. KELLOCK,
Board Member nominated by the Company.

CONCILIATION WORK OF THE DEPARTMENT OF LABOUR FROM OCTOBER 1, 1936, TO DECEMBER 31, 1936

CONCILIATION proceedings are carried on by the Department of Labour for the most part under the provisions of the Conciliation and Labour Act which empowers the Minister to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together, and to appoint a conciliator or an arbitrator when requested by the parties concerned. In some disputes occurring in industries coming directly under the Industrial Disputes Investigation Act, namely, mines and public utilities, preliminary inquiries and mediation by officers of the Department result in the settlement of the matters in dispute without the necessity of the establishment of Boards of Conciliation and Investigation.

The Department of Labour has on its staff conciliators and mediators who are stationed at Vancouver, Toronto, Ottawa, and Montreal. The territory of the officer resident in Vancouver comprises the four western provinces. The conciliation officer resident in Toronto confines his activities to Ontario, while the officer in Montreal covers the province of Quebec and the Maritime Provinces. The headquarters of the Chief Conciliation Officer are at Ottawa.

These officers are also charged with certain duties arising out of the administration of the Fair Wages Policy applying to contracts let by the Dominion Government and to works aided by federal funds.

The following statement covers the more important conciliation matters dealt with during the period October 1 to December 31, 1936. (An article covering the period July 1 to September 30, 1936, appeared in the LABOUR GAZETTE, October, 1936, page 873.)

OPERATING ENGINEERS, HAMILTON, ONT.—Reference was made in the July and October, 1936, issues of the LABOUR GAZETTE to the efforts which were being made through the conciliation service of the Department of Labour to settle a dispute between the Hamilton By-Product Coke Ovens, Limited, and its operating engineers. The employees had asked for increased wages and certain improvements in working conditions, and had made application to the Department of Labour for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. By October 19, 1936, a settlement had not been reached and therefore the Board, which had been established on June 15th, was finally constituted.

FREIGHT HANDLERS, ST. ANDREWS, N.B.—In the October, 1936, issue of the LABOUR GAZETTE, at page 874, reference was made to a dispute involving the Canadian Pacific Railway Company and certain of its freight handlers at St. Andrews, N.B., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. At the close of September efforts were still being made to settle this dispute without the necessity of establishing a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, for which application had been made. At the end of December negotiations, which had been delayed for a period, had been renewed.

COAL MINERS, CARBON, ALTA.—In the October, 1936, issue of the LABOUR GAZETTE (page 877) reference was made to a strike of coal miners, members of District No. 18, United Mine Workers of America, employed by the Peerless Carbon Collieries, Carbon, Alberta, to enforce the payment of increased wages and union recognition, and the efforts of a conciliator of the Department of Labour to negotiate a mutually satisfactory agreement. Work was resumed on September 25th pending the result of further conferences. Early in October word was received that an agreement had been signed providing for slightly higher wages in one class. The contract covered four mines in the district, namely, the Peerless Carbon Collieries, Limited, the Arctic Coal Company, the Balogh Coal Company and the Carbon Black Coals.

COAL MINERS, CADOMIN, ALTA.—In the October, 1936, issue of the LABOUR GAZETTE, at page 876, mention was made of a dispute between the Cadomin Coal Company, Limited, Cadomin, Alberta, and its coal miners, members of Local Union No. 7296, United Mine Workers of America, as to the interpretation of a clause in the existing agreement providing for the equal distribution of work for miners employed in the shaft and tunnel mines. The dispute, in accordance with the terms of the existing agreement, had been referred to an independent chairman named by the Minister of Labour. The decision of this chairman, however, was not accepted by the employees and a strike occurred on October 26, 1936. Subsequently the conciliation services of the Department of Labour were requested by both employer and employees, and an officer

reached Cadomin on November 20th. Following a conference with the executive committee of the Local Union a mass meeting of the employees was held at which it was decided that work would be resumed at once and an application made for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act. It was further agreed that the employing company would also apply for the establishment of a Board, and that the report of such Board would be final and binding upon both parties during the term of the agreement then in effect. Work was resumed on November 23rd, and the Board was established on November 30th. Three hundred and fifty employees, the application stated, were directly affected by this dispute.

COAL MINERS, BLAIRMORE, ALTA.—Early in October, 1936, a dispute arose between the management of the West Canadian Collieries, Limited, Blairmore, Alberta, and the coal miners in their employ, members of District No. 18, United Mine Workers of America, over the question of union recognition and the matter of check-off provisions. At the request of representatives of the miners an officer of the Department of Labour mediated, and direct negotiations which followed resulted in an agreement being signed covering the Blairmore and Bellevue mines of this Company.

MEAT CUTTERS, VANCOUVER, B.C.—Early in October, 1936, a delegation representing the Vancouver and District Trades and Labor Council approached a conciliation officer of the federal Department of Labour with the request that he endeavour to bring about the reinstatement of an employee of the Burns Company, Limited, who had been discharged for failure to perform certain duties assigned to him, and also attempt to persuade that Company to recognize the Meat Cutters' Union. An interview was accordingly arranged with the general manager of the employing company, and it was finally agreed that the employee in question would be given work in a different department of the plant but at similar wages. As to the matter of union recognition, the management stated it was not the policy to recognize any labour union though they had no objection to any employee being so affiliated.

TELEGRAPH MESSENGERS, CANADIAN NATIONAL RAILWAYS, MONTREAL, P.Q.—Telegraph messengers, members of Local No. 268, Canadian Brotherhood of Railway Employees, employed in the Commercial Telegraph Department of the Canadian National Railways, made application to the Department of Labour on October 19, 1936, for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act to deal with the employees' request for an agreement embodying rates of pay and working conditions. As it did not appear that proper negotiations had taken place prior to the application being made a departmental officer arranged for further conferences to be held between the parties directly concerned, and at the close of the year these negotiations were still under way. The application stated that 131 employees were directly affected by this dispute.

TELEGRAPH MESSENGERS, CANADIAN PACIFIC RAILWAYS COMPANY, MONTREAL, P.Q.—On October 14, 1936, application for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act was made on behalf of telegraph messengers, members of Local No. 269, Canadian Brotherhood of Railway Employees, employed in the communication department of the Canadian Pacific Railway Company. The dispute related to the employees' request for an agreement covering rates of pay and working conditions. The application stated that 96 employees were directly affected. As, in the opinion of departmental officials, proper negotiations had not taken place, arrangements were made for conferences between the parties directly concerned, and at the close of the year negotiations were still proceeding.

PHOTO-ENGRAVERS, TORONTO, ONT.—On October 30, 1936, a request was received for the services of a conciliation officer in connection with a threatened strike of photo-engravers, members of the International Photo-Engravers' Union of North America, employed by Brigdens Limited, Toronto, Ontario. The employing company, a few days previously, had advanced an apprentice to do the work of a journeyman, and the union officials took exception to this on the ground that such action was a violation of the existing agreement as qualified journeymen were available. The management acceded to the demand of the union and demoted the apprentice, thus avoiding the immediate danger of a strike, but the policy to govern the employment of apprentices in future remained in dispute. The departmental officer interviewed both parties and advised them as to the course which, in his opinion, should be followed. Arrangements for further negotiations between the parties directly concerned were made, it being understood that the ser-

vices of the Department of Labour would again be available if an amicable settlement was not reached.

HOTEL EMPLOYEES, WINDSOR, ONT.—On November 10, 1936, at the request of the Trades and Labour Council, Windsor, Ontario, a conciliator of the Department of Labour investigated a dispute between the management of the Norton-Palmer Hotel at that point and certain of its employees, members of the Hotel and Restaurant Employees' Union. A strike had occurred on October 8 following the formation of the local union and the subsequent demand of the employees for wage increases, a six-day week and improved meals and working conditions. The strikers had at once been replaced but the hotel was picketed, the strikers displaying placards. The departmental officer conferred with the management of the hotel and with representatives of the strikers, and later arranged for negotiations to be opened between the parties directly concerned. As a result an agreement was reached on November 12 which provided for the reinstatement of all strikers and slight wage increases in a few instances. Approximately 40 employees were stated to be involved in this dispute.

COAL MINERS, NACMINE, ALTA.—Early in November, 1936, a dispute over the mining of so-called "grey" coal arose between the Red Deer Valley Coal Company, Limited, Nacmine, Alberta, and its coal miners, members of District No. 18, United Mine Workers of America, and a strike took place on November 24. This action constituted a violation of the existing agreement, which provided for the reference of any such dispute to an independent chairman without any cessation of work. The matter was brought to the attention of the Department of Labour by the employing company, and a conciliator endeavoured to induce the men to return to work and refer the matter in dispute to an arbitrator. This the men at the time refused to do but eventually, on the advice of the president of District No. 18, United Mine Workers of America, this course was followed, operations being resumed on December 5. Approximately 140 miners were said to be affected by the dispute.

BAG FACTORY WORKERS, WALKERVILLE, ONT.—A dispute between the Walkerville Bag Company, Walkerville, Ontario, and certain of its employees, members of Federal Labour Union No. 20303, arising out of the employees' demand for increased wages and shorter hours was dealt with by a conciliator of the federal Department of Labour during the period in review. A strike to enforce the employees' demands occurred on September 28 and, subsequent efforts to settle the dispute having failed, the Essex County Trades and Labour Council requested the services of the federal Department of Labour early in November. The conciliator was successful in eliminating the main points in dispute, and suggested a basis upon which further direct negotiations could be reopened should the employer find it possible to resume operations. Due, however, to the financial loss resulting from the cancellation of orders during the strike the management was unable at that time to give any undertaking as to future operations. Word was later received, however, that the plant had been reopened and the employees were being taken back as rapidly as business permitted. The settlement was covered by a signed agreement, the details of which were not made public. Forty-one employees were said to be affected by this dispute.

RESTAURANT WORKERS, HAMILTON, ONT.—On December 5, 1936, the conciliation services of the Department of Labour were requested in connection with a strike of employees in the Normandie Grill, Hamilton, Ontario, which had occurred on or about November 9 as a result of a dispute between the proprietor and one of the employees. Six workers only were directly involved, and the premises were picketed. A conciliator of the Department, accompanied by a representative of the Hotel and Restaurant Employees' International Alliance, visited Hamilton and was successful in securing a settlement on December 8.

TEXTILE FACTORY WORKERS (ARTIFICIAL SILK) CORNWALL, ONT.—The Department of Labour was advised on December 19, 1936, that a strike was imminent in the plant of Courtaulds (Canada), Limited, Cornwall, Ontario, due to the failure of the management to reinstate certain employees who had been involved in the strike which had occurred in that plant in August. The matter was brought to the attention of the employing company, and shortly thereafter the Department was advised that a compromise settlement had been reached.

WHEEL WORKERS, WINDSOR, ONT.—A strike of approximately 140 employees, members of Local No. 195, International Union, United Automobile Workers of America, occurred in the plant of the Kelsey Wheel Company, Limited, Windsor, Ontario, on December 16, 1936. The plant employed approximately 180 men. The demands of the employees included wage increases, extra payment for overtime, adjustments of complaints in respect to speed-up, the reinstatement of 5 employees who had been dismissed, and recognition of the union. At the request of His

Worship the Mayor of Windsor, received in the Department of Labour on December 23, for the conciliation service of the Department, steps were taken immediately to ascertain if this service would be acceptable to the parties directly interested. Satisfactory replies having been received an officer of the Department arrived in Windsor on December 26 and conferred with officials of the employing company and with officials of the union. As a consequence the strike was terminated on the evening of the 29th, the men resuming work the following morning. The settlement provided for an hourly wage increase of 5 cents for skilled and semi-skilled workers, effective January 1, 1937; that all strikers would be re-employed without discrimination; and an acceptable arrangement was made for determining any grievance which might arise from time to time. It was understood that the 5 men who had been dismissed would be re-employed upon making individual application to the company but this did not form a part of the strike settlement.

HOSIERY WORKERS, HAMILTON, ONT.—A complaint was received in the Department of Labour from the All-Canadian Congress of Labour that a number of knitters employed by the National Hosiery Mills, Limited, Hamilton, Ontario, had been dismissed, allegedly because of their membership in the National Hosiery Workers' Union, and request was made that the matter be investigated. An officer of the Department of Labour visited Hamilton on December 27 and 28, and discussed with a number of the employees, and subsequently with the Vice-President of the company, the allegations which had been made in this respect. It was ascertained from the employees' representatives that only three of the dismissed employees held membership cards with the union. The Vice-President of the company informed the departmental officer that he fully recognized the right of freedom of association of the employees, and had no objection to them becoming members of a union of their choice. He further stated that the dismissals or lay-offs in question had been altogether due to unsatisfactory service and the closing down of a number of machines for repairs. The plant was closed at the time of this conference, and no assurance could be given as to when it would again be operating at full capacity. The Vice-President intimated, however, that under favourable operating conditions it was quite probable that a number of those concerned would be re-employed.

MEAT PACKERS, VANCOUVER, B.C.—On December 30, 1936, approximately 200 employees of Burns and Company, Limited, Vancouver, B.C., members of Local No. 95, Meat Cutters and Packing House Employees' Union, ceased work following the dismissal of 18 employees from the plant. A conciliation officer of the federal Department of Labour, accompanied by the Deputy Minister of Labour of British Columbia, interviewed the General Manager of the employing company. He stated that the dismissals were due to the inefficiency of the men and the necessity for reduction in staff, and he alleged that the stoppage of work was caused through the efforts of the Meat Cutters' Union to gain recognition. The General Manager agreed to meet a committee of the strikers, but it developed that the employees insisted that at least two of the men who had been dismissed would be included in the committee, and the General Manager refused to concede this point. At the end of the year the dispute had not been adjusted.

Report of Montreal Housing Committee

"Housing for the Low Wage Earner" is the title of a report made recently by a committee of the Montreal Council of Social Agencies. In April, 1935, the Council appointed a committee "to study the relationship of housing to the prevention and alleviation of social problems and to establish, in general terms, minimum standards of housing."

The conclusions reached by the Committee were as follows:

(1) Evidence has been produced to show the close relationship between proper housing and the proper physical and social development of the population.

(2) On an economic basis an average dwelling conforming to proper standards must produce a rental of $25-$30 a month, which is almost twice the capacity of low wage earners to pay.

(3) The gap between high rents and low wages is the crux of the housing problem.

(4) With regard to the question of home ownership or tenancy, it is considered that for the low wage earner tenancy should be favoured.

(5) A housing project to produce the best results must be under the supervision of one who has an appreciation of the social value of good housing.

(6) A housing scheme must be protected by adequate town planning legislation.

(7) The participation of the Federal Government is recommended to secure reasonable uniformity throughout the country and to make available its borrowing powers to secure money at low rates of interest.

Five special studies contained in the report were also submitted by the Committee under the following headings: (*a*) Health Standards; (*b*) Neighbourhood Standards; (*c*) Ability of the Wage Earner to pay rent; (*d*) What may a family of five expect from a community; (*e*) plans for cheap wooden houses.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1936

THE following table shows the number of disputes, workers involved, and time loss for December, 1936, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Dec., 1936	20	3,137	15,917
*Nov., 1936	14	1,264	11,327
Dec., 1935	8	431	3,152

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

A considerable increase appears in the number of disputes as well as in workers involved and time loss recorded for December. Four cotton factory strikes accounted for nearly one-half of the workers involved and over one-half of the time loss. A substantial part of the remaining time loss was due to strikes of fur workers at Winnipeg, Man., wheel factory workers at Windsor, Ont., longshoremen at Vancouver, B.C., and Point Edward, Ont. Most of the time loss in November was due to strikes of coal miners at Cadomin, Alta., fur workers at Winnipeg, Man., and longshoremen at Vancouver, B.C., but the numbers of workers involved in these were not large. In December, 1935, none of the disputes involved large numbers of workers or caused great time loss.

Seven disputes, involving 704 workers, were carried over from November, one of these, coal miners at River Hebert, N.S., not having been included in the table in the December LABOUR GAZETTE, as detailed information regarding the dispute was not available at that time. Thirteen disputes commenced during the month. Of these twenty disputes, sixteen terminated during the month, seven resulting in favour of the employers involved, two in favour of the workers affected, compromise settlements being reached in six cases, while the result of one dispute was recorded as indefinite. At the end of December, therefore, there were on record four disputes recorded as strikes or lockouts, namely: fur factory workers, Winnipeg, Man.; longshoremen, Vancouver, etc., B.C.; meat packing workers, Vancouver, B.C.; and cotton factory workers, Welland Ont.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received, indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; and moulders, Peterborough, Ont., February 27, 1934, one employer; glassworkers at Hamilton and Wallaceburg, Ont., at Redcliff, Alberta, August 19, 1936, one employer; and coal miners at Rivert Hebert, N.S., Oct. 23, 1936, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

A strike of 265 coal miners at Midlandvale, Alta., from November 10 to November 13 was not reported in time for inclusion in the LABOUR GAZETTE for December. The miners objected to a change in certain work which resulted in two men being laid off. Work was resumed pending negotiations for a settlement.

A minor dispute occurred at Niagara Falls, Ont., on December 5 in one chain manufacturing establishment when twenty-nine machine operators ceased work for two hours, indirectly affecting the work of thirty-nine other employees. The cause of the dispute was the dismissal of three men for activity in a recently organized local of the Amalgamated Association of Iron, Steel and Tin Workers of North America. Work was resumed pending a conference with the management. On December 15 a strike occurred again in the plant, as recorded in the list of strikes and lockouts.

A minor dispute occurred at Toronto, Ont., on December 10 when two bricklayers were called off a job by the international union when the employer refused to employ only members of that union. The job was picketed until finished.

29936—2½

A number of workers in one mine at Reserve, N.S., it has been reported in the press, refused to work on December 17 owing to a dispute among the employees as to equal distribution of work with the result that 125 men lost one day's work. Reports from the parties involved in the dispute have not been received, but it does not appear that the dispute was with the management.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

COAL MINERS, NACMINE, ALTA.—The dispute in one colliery as to non-payment for grey coal, which commenced on November 24, was terminated on December 4, work being resumed pending negotiations as provided under the agreement, as a result of mediation by the western representative of the Department of Labour.

COAL MINERS, RIVER HEBERT, N.S.—As mentioned in the December issue of the LABOUR GAZETTE, a strike of miners in one colliery at River Hebert, N.S., occurred on November 29. The miners demanded changes in working conditions in a pit recently re-opened and work was resumed on December 3 when satisfactory arrangements had been made.

FUR WORKERS, WINNIPEG, MAN.—The Commissioner appointed on November 13 by the provincial government to investigate this strike, which commenced on August 11, continued the inquiry until December 19, when an adjournment until January 4 was arranged. On December 15 one picket was convicted of assault and sentenced to one month's imprisonment, an appeal being entered, and one was fined five dollars, the fine being paid.

FURNITURE FACTORY WORKERS, LISTOWEL, ONT.—Employees on strike in one factory since November 30 in protest against the laying off of two men, claiming that work was not being divided equally as required by the agreement, resumed work on December 2 when the management agreed to give helpers as much work as possible.

LONGSHOREMEN, POINT EDWARD, (SARNIA), ONT.—The strike of a number of employees of two companies at Point Edward on November 30 continued until the close of navigation on December 11, but in the meantime some of the strikers returned to work and others were replaced.

RESTAURANT EMPLOYEES, HAMILTON, ONT.—A number of employees ceased work on November 2, demanding the immediate re-employment of one worker after an absence on account of illness. The employer stated that the substitute required one week's notice. Only six employees ceased work but picketed the establishment so that the main dining room was closed and fifteen or sixteen other employees were indirectly affected. The union refused to sanction the strike but the strikers refused to resume work or to remove the pickets. On December 5 the proprietor requested mediation by the Department and on December 8 a representative of the Department brought about negotiations between the union representatives and the management. The dispute within the union was settled and the strike was called off.

PULPWOOD CUTTERS, UPSALA, ONT.—Employees in the camps of one employer ceased work from December 5 to December 9, demanding the wage scale and rates for board specified in the agreement under the Industrial Standards Act of Ontario, which expired on October 1, 1936 (LABOUR GAZETTE, April, 1936, page 372). The employer stated that operations were commenced with inexperienced men to whom lower rates were paid. The Lumber and Sawmill Workers' Union, Local 2786 of the United Brotherhood of Carpenters and Joiners of America, negotiated with the employer and the wage scale was restored while the rate for board was lowered. Wages for bushmen were raised from $30 per month and board to $37.50 per month and board. Pay for piece workers was raised from $1.75 per four foot cord to $2. Wages of blacksmiths, cooks, etc., were similarly increased.

MEAT PACKING WORKERS, VANCOUVER, B.C.—A number of employees in one establishment (202 out of 280) ceased work on December 29, against the dismissal of eighteen workers, including officers of the Meat Cutters' Union, organized some months previously. The management stated that the men were dismissed partly owing to slackening of trade and partly for inefficiency. At the request of the officers of the Trades and Labour Council the provincial Deputy Minister of Labour and the western representative of the Department of Labour interviewed the manager who expressed willingness to meet a committee of the strikers but not if it included any of the men dismissed or the union officers as it was not the policy of the company to recognize unions. The strikers insisted on the inclusion of two of the men dismissed and at the end of the month a settlement had not been reached.

COTTON FACTORY EMPLOYEES, HAMILTON, ONT.—The elastic weavers in one establishment ceased work on December 5 and most of the other employees on December 7. The company had made a wage increase of six per cent, bringing the wage scale back to that in 1929

but the workers demanded twelve per cent. When the management agreed to make adjustments in any rates not considered fair, all except the elastic weavers resumed work on December 8 and these returned on December 9.

COTTON FACTORY WORKERS, SHERBROOKE, P.Q.—A number of the employees, twenty-nine, in the spinning department of one factory ceased work on December 11 demanding an increase in wages to $14 per week of fifty-five hours. It appears that they were men doing work ordinarily done by youths as learners paid at piece rates, and the earnings were stated to be from 9½ cents to 17 cents per hour. Work for all employees in the department ceased, involving 160, and it was stated that many of these were deterred from work by pickets supported by a large number of other persons. On December 15 two other departments were closed, bringing the total number affected to 208. The civic authorities met with the management and representatives of the employees and it was arranged that the male adults would be given higher paid work in other departments as soon as possible and that the wage scale would be reviewed. Work was resumed on December 16.

COTTON FACTORY WORKERS, WELLAND, ONT.—Employees in one establishment ceased work on December 22 demanding an increase in wages of twenty per cent. The company had made an increase of six per cent. The strikers picketed the establishment and the company closed the plant and announced that an inventory was being taken. A committee of the employees negotiated with the management and on December 29 a representative of the Ontario Department of Labour arrived to participate and proposed that the dispute be arbitrated. This was taken under consideration by the strikers. The company opened the plant but it was reported that the pickets allowed only foremen and office workers to enter under police protection and they were assured that no goods would be shipped. Early in January arrangements were made for a meeting of the management with a more representative committee of employees.

COTTON FACTORY WORKERS, ST. GREGOIRE DE MONTMORENCY, P.Q.—Employees of the spinning department, day and night shifts, in one establishment ceased work from December 23 to December 28 demanding an increase in wages of fifteen per cent. The management had increased wages in the plant by seven per cent but stipulated that the spinning department must increase production. The plant was closed on December 24, involving 1,640 employees indirectly. A representative of the provincial Department of Labour brought about negotiations between a committee of the employees and the management and a piece rate system of payment was agreed to. It was also arranged that shop committees would be formed to take up any grievances with the management. Work was resumed on December 28.

SILK FACTORY WORKERS, COWANSVILLE, P.Q.—Employees in one establishment ceased work from December 22 to noon, December 23, in protest against the conduct of a foreman, the number of looms per worker, and for an adjustment in wages. At the request of the local member of the provincial legislature a representative of the provincial Minister of Labour met the parties and arranged that the dispute be referred to arbitration under the Quebec Conciliation and Arbitration Act, 1925. The Board consisted of Mr. L. A. Giroux, K.C., Chairman, Mr. L. S. Lee, representing the company, and Mr. Hector A. Lalonde representing the workers.

WHEEL FACTORY WORKERS, WINDSOR, ONT.—A number of employees ceased work on December 16 demanding recognition of the United Automobile Workers of America, increases in wages, the reinstatement of five workers dismissed and certain changes in working conditions. At the beginning of the strike the men remained at their working places but were told to leave at closing time and those who refused to go were escorted from the building by police. The establishment was picketed and on December 21 five men were arrested on charges of intimidation and unlawful assembly, being released on bail pending trial. The Mayor of Windsor requested mediation by the Department of Labour and on December 26 the Chief Conciliation Officer of the Department arrived in Windsor. On December 30 a settlement was reached under which an increase in wages of five cents per hour was made for skilled and semi-skilled classes and all strikers were re-instated. The cases of the men previously dismissed were left in abeyance.

STEEL WORKERS (CHAIN), NIAGARA FALLS, ONT.—A number of workers in one establishment ceased work on December 15 in protest against the dismissal of certain employees in October, alleged to be for union activity as members of a recently organized local of the Amalgamated Association of Iron, Steel and Tin Workers of America. A strike for two hours had occurred on December 5 but work was resumed pending negotiations. The strikers demanded reinstatement of the men discharged, recognition of the union, increases in wages, the eight hour day and forty-four

hour week and improvements in working conditions. The management stated that the men had been dismissed for organizing during working hours and for intimidating other employees. The union had during November protested to the Ontario Minister of Labour against these dismissals and the latter sent an investigator who was assured that the company had no objection to its employees joining any union but that these men had been dismissed owing to their objectionable conduct. By December 21 some of the strikers had been replaced and the others had resumed work.

ROAD CONSTRUCTION WORKERS, CHIBOUGAMAU-LAKE ST. JOHN HIGHWAY, P.Q.—A number of the workers on a highway construction job (100 out of 300) ceased work on December 21 demanding increases in wages and improved living conditions. The employer is reported to have stated that they were paid from $40 to $60 per month, the charge for board being 75 cents per day. Within a few days the men began to return and by the end of the month nearly all had resumed work.

LABOURERS (DITCHING), MIDDLECHURCH, MAN.—Employees on a ditch under construction by the provincial government as a relief project ceased work on December 8 demanding increases in wages and reductions in charges for board, shelter, etc. The men were paid 21 cents per hour, 44 hours per week, the charge for board and lodging being $6.25 per week, but demanded 25 cents per hour, the rate under the Minimum Wage Act, for work in cities and urban districts. The government officials made it clear that the rates were in accordance with the minimum wage order for work outside of cities and work was resumed at noon the next day.

LABOURERS, SHERBROOK, P.Q.—Labourers, cutting wood as relief work on the site for a power development project, near Sherbrooke, ceased work on December 19, demanding increases in wages to $40 per month and board instead of $28 and $32 with board. Previously they had been paid 25 cents per hour. Work was resumed in half a day when the demand was refused.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1936*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in progress prior to December, 1936			
MINING, ETC.—			
Coal miners, Nacmine, Alta....	140	560	Commenced Nov. 24, 1936; *re* payment for grey coal; terminated Dec. 4, 1936; indefinite.
Coal miners, River Hebert, N.S.	23	46	Commenced Nov. 29, 1936; for change in working conditions; terminated Dec. 2, 1936; in favour of workers.
MANUFACTURING—			
Fur, Leather, etc.—			
Fur factory workers, Winnipeg, Man.....	100	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and 40-hour week; unterminated.
Other Wood Products—			
Furniture factory workers, Listowel, Ont.....	85	85	Commenced Nov. 30, 1936; to maintain equal division of work; terminated Dec. 1, 1936; compromise.
TRANSPORTATION—			
Water—			
Longshoremen, Vancouver, Victoria, etc., B.C.....	200	1,000	Commenced Nov. 23, 1936; sympathy with strike of longshoremen in U.S.A. and for recognition of union; unterminated.
Longshoremen, Point Edward (Sarnia), Ont.....	150	1,000	Commenced Nov. 30, 1936; for increased wages; lapsed by Dec. 11, 1936; in favour of employer.
SERVICE—			
Business, etc.—			
Restaurant employees, Hamilton, Ont.....	6	42	Commenced Nov. 2, 1936; against discharge of worker; terminated Dec. 8, 1936; in favour of employer.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1936*

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(b) Strikes and Lockouts commencing during December, 1936			
LOGGING—			
Pulpwood cutters, Upsala, Ont.	80	280	Commenced Dec. 5, 1936; for increased wage rates and reduction in rate for board; terminated Dec. 9, 1936; in favour of workers.
MANUFACTURING—			
Animal Foods—			
Meat packing workers, Vancouver, B.C.	202	606	Commenced Dec. 29, 1936; against discharge of employees (claimed to be for union activity); unterminated.
Textiles, etc.—			
Cotton factory workers, Hamilton, Ont.	300	900	Commenced Dec. 5, 1936; for increase in wages; terminated Dec. 8, 1936; compromise.
Cotton factory workers, Sherbrooke, P.Q.	29	116	Commenced Dec. 11, 1936; for increased wages; terminated Dec. 15, 1936; compromise.
Cotton factory workers, Welland, Ont.	865	6,488	Commenced Dec. 22, 1936; for increased wages; unterminated.
Cotton factory workers, St. Gregoire de Montmorency, P.Q.	204	612	Commenced Dec. 23, 1936; for increased wages; terminated Dec. 26, 1936; compromise.
Silk mill workers, Cowansville, P.Q.	175	262	Commenced Dec. 22, 1936; for change in working conditions and increased wages; terminated Dec. 23, 1936; compromise.
Metal Products—			
Wheel factory workers, Windsor, Ont.	140	800	Commenced Dec. 16, 1936; for recognition of union; increase in wages and against dismissal of workers; terminated Dec. 29, 1936; compromise.
Chain factory workers, Niagara Falls, Ont.	37	185	Commenced Dec. 15, 1936; against dismissal of workers and for union recognition; terminated Dec. 19, 1936; in favour of employer.
CONSTRUCTION—			
Highway—			
Road construction workers, Chibougamau-Lake St. John Highway, P.Q.	100	500	Commenced Dec. 21, 1936; for increased wages and change in living conditions; lapsed by Dec. 31, 1936; in favour of employer.
Other—			
Labourers (ditching), Middlechurch, Man.	250	375	Commenced Dec. 8, 1936; for increased wages; terminated Dec. 9, 1936; in favour of employer.
Labourers, Sherbrooke, P.Q.	47	24	Commenced Dec. 19, 1936; for increased wages; terminated Dec. 19, 1936; in favour of employer.
SERVICE—			
Business, etc.—			
Restaurant workers, Regina, Sask.	4	36	Commenced Dec. 22, 1936; for increased wages, reduction in hours and recognition of union; lapsed by Dec. 31, 1936; in favour of employer.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

RESTAURANT WORKERS, REGINA, SASK.—A number of the employees in one restaurant ceased work on December 22, demanding increases in wages, reduced hours and union recognition. The establishment was picketed and one picket was arrested on a charge of watching and besetting, being released on bail pending trial. By the end of the month it was reported that the strike had elapsed.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue of February, 1936, in the review of Strikes and Lockouts in Canada and Other Countries, 1935. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes beginning in November was 100 and 16 were still in progress from the previous month, making a total of 116 disputes in progress during the month, involving 34,700 workers, with a time loss of 156,000 working days for the month.

Of the 100 disputes beginning in November, 25 were over demands for advances in wages, 3 over proposed wage reductions, 23 over other wage questions, 3 over questions as to working hours, 28 over questions respecting the employment of particular classes or persons, 5 over other questions respecting working arrangements and 13 over questions of trade union principle. Final settlements were reached in 81 disputes during the month, of which 24 were settled in favour of workers, 37 in favour of employers, 20 ended in a compromise; in 6 other disputes, work was resumed pending negotiations.

France

No report of a settlement of the strikes of metal workers mentioned in the last issue of the LABOUR GAZETTE has been noted.

United States

The number of disputes beginning in September was 205, and 140 were in progress from the previous month, making a total of 345 disputes in progress during the month, involving 125,000 workers, with a time loss of 1,120,000 working days for the month.

Strikes in the automobile and automobile parts manufacturing industry at Flint, Michigan, and several other cities were in progress during December, chiefly at plants of the General Motors Corporation. These largely took the form of "sit-down" strikes. By January 9, a total of 100,000 workers were reported out of employment, either on strike or indirectly affected. The causes of the various disputes were alleged dismissal or transfer of union members, "speed-up" methods and in some cases demands for increased wages. These workers had recently been organized by the Committee for Industrial Organization, and the main object of the strikes was reported to be the demand for a joint conference to settle a basis of collective bargaining conditions for all plants of the corporation, which has plants in thirty-five cities and employs over 200,000 workers.

There were no important changes in the strikes of longshoremen and seamen as reported in the last issue of the LABOUR GAZETTE. The strike was still almost totally effective in Pacific Coast ports and partially effective in the eastern and Gulf ports, in which latter ports the International Seamen's Union continued to supply men for many vessels.

There were, during the quarter ending December 31, 1936, 15,313 accidents reported to the Workmen's Compensation Board of Ontario. These accidents were reported in the industries in Schedule I of the Act, 94 of which were fatal accidents. In Schedule 2 industries, 724 accidents were reported including 20 fatal cases; and 691 Crown, 9 of which were fatal, were reported during the last quarter, making in all 16,737 accidents, of which 123 were fatal.

According to a press report dated December 27, 1936, the French Compulsory Labour Arbitration Law passed the Senate by a vote of 170 to 89. Premier Blum, it is reported, appeared personally to defend the Bill against an amendment denying re-employment of workers discharged during labour disputes which are still unsettled.

According to a notice in the *British Columbia Gazette* of December 31, 1936, Mr. Eldon Sidney Hilliard Winn of Vancouver has been reappointed a member and Chairman of the Workmen's Compensation Board, for a further term of ten years.

NEW YEAR'S MESSAGE OF MINISTER OF LABOUR

Hon. Norman McL. Rogers reviews Industrial Situation—Freedom from Regimental Dictatorship—Employees' Right of Association

THE following message and appeal to industry and labour was issued by the Hon. Norman McL. Rogers, Minister of Labour on December 30:

"As a result of the substantial progress of the past year it is possible to predict the future course of business recovery in Canada with greater confidence than at any time since 1930. The accumulating evidence of improved conditions is now visible on all sides. The upward trend is established. We are justified in making our plans for the coming year on the assumption that 1937 will bring greater industrial activity, more employment and higher returns to industrial and commercial undertakings throughout the Dominion.

"There is cause for deep satisfaction in this forecast. There is also a warning, which we shall do well to heed. If business recovery is to make its maximum contribution to national welfare, we must guard against the disorganization of business by industrial disputes. The effect of widespread industrial discord is not to be measured in dollars and cents. It goes deeper than that. It threatens the foundations of goodwill and fair dealing which unite different economic groups in a national community and give them a feeling that they share a common heritage.

"In many countries to-day peoples are divided into antagonistic groups in an attitude of bitter suspicion and conflict. In some countries this conflict led to the loss of freedom and the rise of dictatorships. We who live in Canada have no desire to follow the example of those nations which have given up the substance of freedom for the shadow of regimented security. Our success in avoiding tendencies towards Communism and Fascism will depend upon our willingness to practise forbearance and tolerance and to adopt the method of co-operation in the conduct of industrial relations."

Responsibility of Leadership.—"I wish to pay tribute to the many leaders of industry and organized labour who have recognized their larger obligation towards the national welfare through the difficult years of the depression. The responsibilities of industrial and labour leaders will be increased with the acceleration of recovery. Already the number of industrial disputes is mounting. Many of these disputes could have been avoided if they had been discussed in their earlier stages in an atmosphere of mutual confidence and understanding.

"Experience gained in the operation of some of the largest industries in Canada indicates the desirability of including in industrial agreements made between employers and workers, machinery for dealing directly and swiftly with any disputes which may arise during the continuance of these agreements. The danger to industrial peace comes from two sides. On the one side there are shortsighted employers who still regard labour as a commodity to be exploited for immediate profit. On the other side there are shortsighted agitators, who seek to create confusion and class hatred for subversive ends. One group is as much a menace to industrial peace as the other. In the long run both will be condemned by an intelligent public opinion."

Right of Association.—"In connection with recent strikes in Canada there have been frequent complaints that certain employers have denied to their employees the right of association and have summarily discharged men and women who have been active in the organization of labour unions. It is necessary to state in the clearest terms that the right of association is a civil right, long established by law and usage. It was affirmed with special reference to Canada by an Order-in-Council of July 11, 1918 (P.C. 1743). It was proclaimed explicitly in the Treaty of Versailles at the close of the World War. To deny the right of workmen to combine in any lawful organization they desire for the promotion of their common welfare is an open invitation to extremists to preach the futility of collective bargaining as an alternative to direct action. The right of association for legitimate purposes should be respected in the national interest and labour should not be denied the means of organizing for collective bargaining. The right of employers to organize for all lawful purposes is not questioned in any quarter. Employers are not entitled in the same breath to protest against governmental regulation of industry and to deny to labour its right to resort to legitimate measures of self-help through voluntary association.

"With the advent of a New Year, which holds great promise for our country, I make an appeal as Minister of Labour for a just and honourable peace between industry and labour. The attainment of this end will require the long view of statesmanship on the part of both. We must think not only of tomorrow but of the day that will follow. The Department of Labour is ready to offer its

services in the removal of existing misunderstandings regarding the implications of the right of association. It is also ready to assist at all times in the adjustment of disputes which are not resolved directly by the method of conference. Let us not forget that the national welfare is above private advantage. Let us remember, above all, that it is the duty of government to see that the benefits of business recovery are developed and conserved for the general good of Canada."

Minimum Wage Order Governing Carpenters in Certain British Columbia Districts

The British Columbia Board of Industrial Relations has recently issued Order No. 40 establishing a minimum wage in the carpentry industry. The Order (published in the *British Columbia Gazette* of December 3) defines "carpentry trade" to mean and include "all work usually done by carpenters in connection with the construction and erection of any new building or structure, or part thereof, and the remodelling, alteration, or repairing of any existing building or structure, or part thereof."

It provides that the minimum rate for every employee in the carpentry trade shall be 70 cents per hour "in all that part of the southerly portion of Vancouver Island which lies within the boundaries of the Land Districts of Victoria, Lake, North Saanich, South Saanich, Esquimalt, Highland, Metchosin, Goldstream, Sooke, Otter, Malahat, and Renfrew."

The Order, which becomes effective on February 1, does not apply to apprentices duly indentured pursuant to the provisions of the Apprenticeship Act.

Coal Mining in Canada in 1935

The Dominion Bureau of Statistics has issued a publication entitled "Coal Statistics for Canada" for the calendar year 1935. According to the survey made, Canadian mines produced 13,888,006 tons of coal worth $41,963,110 during 1935, as compared with 13,810,193 tons valued at $42,045,942 produced during the preceding year. Canada imported 13,006,021 tons of coal in 1935, representing a decline of 5·8 per cent from the 1934 total of 13,809,045 tons.

Canadian coal mines furnished employment to 24,831 wage earners in 1935, compared with 24,671 in the previous year. The eastern coal mines employed, on the average, 13,810 men and western coal mines, 11,021 men. Surface employees averaged 244 days' work during the year and underground workers 209 days. There were, in addition to these men, 1,367 salaried employees on the mine payrolls in 1935. Salaries and wages paid to all employees working in or about Canadian coal mines in 1935 amounted to $26,595,344, as compared with $25,662,591 in 1934.

Canadian Fisheries

"Fisheries Statistics of Canada, 1935," is the title of a report issued under an arrangement for statistical co-operation between the Dominion Bureau of Statistics and the Government departments having jurisdiction with regard to fisheries throughout Canada.

According to the report there were 953,201,600 pounds of fish landed in the whole of Canada during the year 1935. This amount includes salt water fish and fish from all of the inland waters where commercial fishing operations are carried on. The market value of the catch came to $34,427,854 compared with $34,022,323 in the previous year, an increase of $405,531.

In 1935, the number of employees engaged in the fishing industry was 82,918 and the capital investment in the industry amounted to $43,617,888. The annual per capita consumption of fish in Canada, according to the report, is estimated at upwards of 21 pounds. Exports amount to from 60 to 70 per cent of the annual catch.

The International Labour Office issued recently, Volume II of the second edition of the "International Survey of Social Services" containing a study of the operation, in 1933, of the social services of 19 countries. In spite of the unavoidable delay in issuing this publication, the data published in the survey may still be regarded as of great value. In particular, a comparison of the texts and figures of 1930 and 1933 for any one country gives some idea of the effects of the depression on its social services and on the level of protection enjoyed by the persons covered by social insurance and assistance laws and regulations.

The Alberta Gazette of December 15, 1936, contained an amended regulation to the Workmen's Compensation Act. Section L of Regulation 9 (LABOUR GAZETTE, March, 1933, page 277) is amended to read "Motor Transportation:—The transportation of passengers by taxi or other motor car methods, except in the operation of regularly established motor-bus passenger lines." The regulation was formerly worded to include motor-bus operation.

"THE NATIONAL ATTACK ON UNEMPLOYMENT"

Review of Unemployment and Relief Situation by Minister of Labour and The Chairman of the National Employment Commission

A review of the progress evident in the national endeavour against unemployment, and a warning that the relief situation still remained the Dominion's most urgent problem, featured addresses on January 11 by the Hon. Norman McL. Rogers, Minister of Labour, before the Canadian Club at Toronto, and by Mr. Arthur B. Purvis, chairman of the National Employment Commission, before the Canadian Club at Montreal.

Hon. Mr. Rogers' address was particularly appropriate because of its emphasis of the tri-partite responsibility of the federal, provincial, and municipal administrations.

Mr. Purvis gave an informative account of the Commission's methods in dealing with the various factors involved in the situation.

Summaries of both addresses follow:

Address of Minister of Labour

Emphasizing that "a supreme effort is still needed before we can remove unemployment and relief from the agenda of unfinished public business," Hon. Norman McL. Rogers, Minister of Labour, in an address before the Canadian Club at Toronto on January 11, on the subject—"A National Attack on Unemployment"—cautioned against facile complacency in regarding unemployment as no longer being "our most urgent national problem."

While assuring his audience "that no member of the government welcomed the growing evidence of business recovery with more intense satisfaction than a Minister of Labour," the Hon. Mr. Rogers considered that he would be doing less than his duty if he failed to draw attention to the existing situation. Pointing to extremes of public sentiment, the Minister observed:

"There is nothing more remarkable in political and business life than the swift changes in sentiment which sweep over an entire country. 'The wind bloweth where it listeth and none knoweth whence it cometh or whither it goeth.' These alternate phases of extreme depression and extreme optimism have to be reckoned with in the conduct of government, but, just as the mariner must make his calculations on the basis of the prevailing winds instead of sudden gales so governments are obliged to frame their policies in accordance with established trends rather than the sudden and unpredictable variations of activity which have their origin in business sentiment."

Referring to the remarkable return of confidence as reflected in the substantial revival of industry and trade, and expressing his belief that this upward trend will be continued in 1937, the Minister warned against over-optimism in regard to relief, adding:

"But the exciting glamour of returning prosperity must not blind us to the harsh realities of unemployment and relief or lessen our appreciation of the measure of the task that is still before us in dealing with this question. Extravagant optimism is as unreliable and dangerous to-day as extreme depression was unreliable and dangerous three years ago."

Many-Sided Problems

Indicating the complexity of the factors bearing upon the problem, the Minister continued:

"In one aspect it is a problem of public finance. It raises in a new and perplexing form the old issue of divided financial responsibility for social services under our federal constitution. In another aspect it is a problem of social welfare. It compels us to examine the obligation of the state to those of its citizens who through no fault of their own are unable to provide themselves and their dependents with the means of subsistence. In still another aspect it is an economic problem. It compels us to reconsider the principles which underly our fiscal and trade policies in order to determine what policies are most likely to produce the maximum degree of employment for our people. It is not too much to say that every activity of government is affected either directly or indirectly by unemployment on a national scale. By its magnitude, its persistence and its complexity this problem of unemployment and relief is a challenge alike to our democratic way of government and our time-honoured methods of industrial and commercial organization."

Voicing his faith in an informed public opinion as an aid to government, Hon. Mr. Rogers submitted the chief features of what he termed an "interim report" on the progress made.

Relief Costs and Grants-in-Aid

First, he dealt with the adjustment of the financial burden of relief costs, pointing out that, as a result of representations supplemented by investigations, an interim increase of 75 per cent was made in the grants-in-aid to the provinces for the winter months (January, February, March, 1936).

Proceeding, he emphasized the determininng factors involved in this decision as follows:

"We rejected the proposal for exclusive Dominion responsibility for direct relief on the long-established principle that the provision of relief is primarily a municipal and provincial responsibility and only becomes a Dominion responsibility to the extent that municipality and province are unable to cope with it. We also believed that the assumption of exclusive responsibility for relief by the Dominion Government would create far greater abuses than it would correct. One of two evils would follow inevitably. Under a national system of relief the Dominion Government would be obliged to place salaried relief officials and inspectors in every municipality granting relief across Canada, thus creating an elaborate, cumbersome and expensive administration which would tend to fasten itself upon the country permanently.

"If, on the other hand, the administration of relief were left with the provinces and municipalities, with the Dominion Government paying the bill, you would have an even more impossible situation. Under this system, municipalities would be given the power to spend more money which they did not have to raise by taxation. All the usual checks against waste and extravagance would be removed. You would have a complete departure from the salutary principle of public finance that, so far as possible, those who spend public money should be directly responsible to those from whom the money is taken by taxation."

In thus rejecting assumption for the entire cost of relief, the Minister pointed out that the government recognized the critical situation created by the cumulative burden of relief costs and hence the increase of 75 per cent in the grants-in-aid.

Then he proceeded to trace the progressive reductions in the grants and announced further reductions in 1937:

"In April (1936) we made a reduction of 15 per cent in the grants to the provinces, followed by a further reduction of 10 per cent in July. The grants will be maintained at their present scale during the months of January, February and March. During this year there will be a substantial reduction in the Dominion grants-in-aid to the provinces. I believe these reductions will be fully justified by the extension of business recovery, by the marked improvement in municipal tax collections and by the improved financial position of most of the provinces. All governments, Dominion, Provincial and municipal, must accept their full responsibility to reduce relief costs during the present year. It is not going to be an easy task but it must be faced with courage, fairness and a just appreciation of what is involved in a long view of social welfare."

Relief Camps

The solution of the problem of relief camps and the steps taken in substitution therefor were next dealt with by the Minister as follows:

"Our next problem was presented by the relief camps. They had been established in 1934 to provide for the single homeless men. At their maximum strength they afforded shelter to 21,000 men. In the last year of their operation they cost the Dominion Government in the neighbourhood of $9,000,000. They were even more costly in terms of dissatisfaction, bitterness and human frustration. They may have been necessary to meet an emergency but the 'On-to-Ottawa' trek and the Regina riots showed the danger of maintaining them on their existing basis. They were not work camps in the proper sense of that term. They were not training camps in the proper sense of that term. For the single unemployed they were a blind alley—a dead-end street. For the government they were an expensive luxury. For Communist agitators they provided a ready-made forum for the propagation of subversive doctrines where teachers and pupils were given shelter, food and clothing at the expense of the Government. After a brief investigation we decided to close the relief camps. It was said in some quarters that the camps could not be closed without riots or serious disturbances. They were closed, according to schedule on July 1 of last year. There were no riots and there were no disturbances."

In the closing of the camps, the Minister outlined how the welfare of the men was made a primary consideration by increased allowances with deferred pay on discharge; and by the co-operative arrangements between the railways and the Government whereby many thousands of single unemployed obtained work on deferred maintenance on the railways. Another avenue of placement was in farm employment which had absorbed 40,000 single adults to date.

Public Works

The Minister next discussed the third issue —the utility of public works in the alleviation of the problem:

"On this question we reached the conclusion that of themselves public works and an increase in government payrolls did not offer an effective remedy for unemployment. We recognized at the same time that in a period of acute depression governments were justified in expanding the normal program of public works and were under an obgigation to adapt such a program to the employment needs of various sections of the country. Therefore, in drawing up our estimates last year, we proceeded on the principle that in formulating a public works program for relief purposes we should select undertakings which had an intrinsic economic value to the nation and which would lead to an ultimate expansion of private employment through the development of natural resources and the tourist trade.

"During the past year the Dominion Government, apart from its own expenditures on federal public works, entered into agreements with the various provinces for joint-works programs amounting to a total joint expenditure of over $30,000,000. A substantial part of this total was expended on tourist roads, and a special appropriation of the Department of Mines was used to stimulate mining development through the building of roads into new mining districts which were not served by the railways. I think this part of our policy has been fully justified by the results it has achieved. At its peak the joint-works program provided work to over 40,000 men across the Dominion. Moreover, in all our agreements with the provinces we stipulated that at least 50 per cent of those employed on joint-works projects should be taken from the unemployed on relief. This was the first year in which the agreements with the provinces contained this specific provision. In its actual operation it produced a marked reduction in relief rolls in all provinces during the summer and autumn months."

Dealing with the activities of the National Employment Commission, the Minister referred to its initiation of the home improvement plan through which $50,000,000 had been made available for home improvement loans. (The work of the Commission is given in more detail in the Montreal speech of Mr. Arthur Purvis, a summary of which appears below).

Private Employment and Trade

Hon. Mr. Rogers declared that "the real answer to unemployment is more private employment, and that the best method of simulating private employment in an exporting country is the expansion of foreign trade." In this respect he referred to the tangible evidences of trade expansion—in the operation of the Reciprocity agreement, the settlement of trade differences with Japan, and in the great increase in export trade, etc.—as contributing to the present industrial activity and the volume of expanding railway traffic.

The Minister concluded in part, as follows:

"Perhaps you will ask me if I am satisfied with what we have done. My answer is—no. I am encouraged and confident but not satisfied. When governments begin to be satisfied with what they have achieved they begin at that moment to die. Freedom united with ordered social progress must be our watchwords. We must have freedom for self-government and the development of individual responsibility. We must build the ramparts of social security against fear, the arch-enemy of human personality. We cannot ignore the quickening of social consciousness in other countries. Land and ocean are no barriers to the advance of social ideals. It has always been the duty of government to administer impartial justice. Let us not forget that in this day and generation justice has acquired a new and broader content than it once possessed. As Lowell truly said:—

> The world advances and outgrows,
> The laws that in our fathers' time seemed best;
> And doubtless after us some purer scheme will be mapped out, by wiser men than we,
> Made wiser by the steady growth of truth.

Within the limits of our opportunities to serve the state, we must seek to create conditions and enact laws within which our people may obtain an ever-expanding measure of welfare and happiness."

Address of Chairman of National Employment Commission

Concentrating on a review of the objectives and progress of the National Employment Commission, Mr. Arthur B. Purvis, chairman of that body, addressed the Canadian Club of Montreal on the same date on which Hon. Mr. Rogers was speaking before the Canadian Club of Toronto.

Mr. Purvis also stressed the major importance of the unemployment problem by showing its hazards to national life. While it was true that drought conditions in the West had aggravated the problem and was one of the contributing factors in not causing a further diminution in relief rolls, yet, he stated, it was

also true that the reduction which had taken place in "the numbers on relief in most of the provinces was commensurate neither with the improvements in the business nor in the employment indices, while the comparison of unemployment relief costs was even less favourable.

"This condition brings increasing dangers for the citizens of Canada, both from a social viewpoint in the effect on character of enforced idleness for those who lack work, and on the employed citizen through the growing burden of taxation, which reaches him mostly in the form of a lower purchasing power for his dollar, or in higher local tax assessments if he owns his home."

Analysis of Fundamental Factors

Mr. Purvis then proceeded to marshal the methods now being employed to attack this problem by a detailed and constructive study of the facts and data bearing on all its complex phases. He stated that the Commission, realizing that the problem was far from being one of unemployment alone, had decided on a fundamental attack rather than follow various popular proposals, such attack to be founded, first in definition of the terms used in speaking of the problem; second, in the accumulation of the facts available, and, third, in their subdivision and analysis. Then they felt they could develop their program for achieving the main end in view—more jobs for those who need them. "Not," he added, "that we had any intention while this analysis was being done, of neglecting any practicable means which might be available, either for providing employment or for handling emergency situations."

Direct Relief Problems

As indicative of the Commission's methods in dealing with direct relief, Mr. Purvis outlined the activities in this field as follows:—

"First we developed for registration purposes a questionnaire in regard to relief recipients, not for the purpose of ascertaining numbers on relief at the different centres, but for the purpose of ascertaining their work experience; the degree of their employability; the degree to which their work has been seasonal in boom and depression years; their housing conditions; the degree to which the problem is industrial or in the primary product field, etc., etc.

"We are sometimes asked why we did not register the unemployed who are not in receipt of direct relief. This was carefully considered and believed to be impracticable at this time for two reasons:

(*a*) "To be effective a card system for the identification of every Canadian citizen employed or unemployed would be required, involving a measure of interference in the personal life of all, which is possible in time of war but which would probably involve disunion rather than union at other times.

(*b*) "It would require the setting of a day by proclamation upon which such citizens would register, and this registration would develop an expectation of immediate employment.

"It was also felt that improved business conditions are in any case tending to absorb first the unemployed not on relief. For they represent that section whose strength of purpose in adversity is so great that their effort is such as to give them a disproportionately good chance of employment as times improve.

"The registration under this questionnaire took place during the month of September, having been postponed from August at the special request of Provincial officials who felt their field organization could not be ready for the earlier date. Some districts are still missing, and while preliminary figures are ready, the really useful section of the information is not yet available owing to the mechanical difficulties of sorting so large an accumulation of data.

"The registration has been organized so as to provide the Canadian public with a continuing monthly record of the unemployment situation."

In dealing with problems of re-employment he stated that the first necessity in the mind of the Commission is "a properly organized Employment Service to link up the unemployed man with the job appropriate and available to him. Methods of improving the existing machinery have been under active investigation from the outset, for a Dominion-Provincial requirement of a permanent nature is here involved, which indeed affects the whole problem of aid, and which can and must be met."

Testing Efficacy of Pulbic Works

In the field of public works he regarded the problem of the Commission as two-fold:

"Firstly, the Commission is interested in knowing and expressing its view on the total moneys which the Government intends to spend on public works of all kinds, whether for the purpose of providing employment or for the normal development of Governmental Departments. This is to enable it to compare that total expenditure with the totals in previous years and so permit the gauging of the effect on employment of any increase or diminution in the works total. Fortunately the rising tide of employment by private capital, coupled with the employment measures arising from Commission recommenda-

tions in housing and other fields, and the revival in the demand for railway equipment, give hope of a reduced Governmental works activity, and if advantage can be taken of this trend it will help in achieving a lesser burden of taxation. For it must be remembered that while Government has to and does step in in emergencies, resultant taxation, and Government competition with private industry for the supply of skilled workers may tend later in the depression period to deprive many more men of work in private industry than Government itself can hope to provide by public works expenditures.

"Secondly, in the public works field, the Commission has established a set of criteria, gleaned from experience in this and other countries, against which it will test the employment efficacy of any public works projects developed for the purpose of providing employment, whether recommended by it to the Government, or whether originated by the Government for the same purpose for submission to Parliament."

He pointed to the home improvement plan as indicating the Commission's adaptation of practical measures. This plan, would result, it was intended, in the stimulation of private expenditures approximating $50,000,000.

Farm Placement

Another immediate problem had been the absorption in winter employment of the thousands of single homeless adults who were congregating mostly in the western cities following closing of the camps. An extended farm placement scheme had been worked out with the provinces, under which 40,000 were already at work on individual farms.

Youth Training

As a result of studies made by the Commission's Youth Committee, re-conditioning plans, both for physical re-conditioning and for training had been worked out, Mr. Purvis said. These plans had been approved in principle by the Minister and it was hoped with provincial co-operation they could be put into use promptly. It was evident that this re-conditioning work must be an integral part of the Commission's plans because of the long-continued idleness of so many citizens, both young and old. Assisted land settlement was also being studied, and a special Veteran's Assistance Commission had been appointed by the government to recommend plans for disabled veterans, with which the National Employment Commission was instructed to co-operate when sanctioned.

Mr. Purvis concluded with a warning note:—

"Some time it is assumed that the good times for which we now look so hopefully, and with some reason, will automatically take care of all dangers inherent in the relief and unemployment situations. The Commission does not believe that to be the case, and if the country does not overcome the problems which have grown up in the last few years, during the anticipated good times, we think we shall enter the next period of lean times in no condition to contend with them."

Eight-Hour Day for Toronto Nurses

The board of the Central Registry of Toronto Graduate Nurses announced recently that members had adopted the eight-hour shift for special nurses in all Toronto hospitals. The new schedule, effective January 15, 1937, reduces the length of duty by four hours and under it a nurse will receive $4 a day. The patient will pay for one meal for the nurse whose hours will be from eight o'clock in the morning to four o'clock in the afternoon; from four to midnight and from midnight to eight o'clock. It is understood that this eight-hour arrangement is already compulsory in London, Ontario, Vancouver, and in leading cities in the United States.

Reference was made in the LABOUR GAZETTE of April, 1936 (page 328) to regulations governing working hours in the shoe repairing industry (Island of Montreal). These regulations made under the Act respecting Limiting of Working Hours (LABOUR GAZETTE, July, 1933, page 695) have now been amended by an Order in Council published in the *Quebec Official Gazette* of December 12, 1936.

The recent Order in Council provides for the inclusion of employees in shoe shine parlours under the scope of the previous order relating to the shoe repairing industry as follows:—

"On and from the 1st of January, 1937, workmen specially charged with the cleaning, shining and dyeing of shoes of any kind, either employed by owners of shoe shine parlours or working as handicraftmen on their own accounts, shall be governed by the provisions of the present Order."

AN APPRECIATION OF RELIEF AS RELATED TO ECONOMIC AND EMPLOYMENT TENDENCIES IN CANADA

Analysis of Factors Tending to Prevent Greater Decrease in Numbers on Relief

Prepared by J. K. Houston, Statistician, Dominion Unemployment Relief, Department of Labour

Statistics concerning unemployment relief and relief expenditures in Canada are not being affected as favourably as might be expected, by the pronounced improvement in employment conditions.

This study is intended to present the factors which tend to prevent relief figures from reflecting more fully the trend of production and employment and to clarify certain aspects of the relief problem and its relation to unemployment and to employment.

Numbers Afforded Relief

Commencing with the month of May, 1932, the provinces have reported to the Department of Labour the numbers afforded direct relief each month and the total monthly cost. (Prior to May, 1932, cumulative figures were reported which cannot be used for comparative purposes with the monthly business and employment indices published by the Dominion Bureau of Statistics.)

In respect to the numbers afforded relief during each month it is to be borne in mind that these include all heads of families, dependents and individual cases who have been in receipt of relief for any part of the month. Consequently, at no one time would there be on relief the total number reported for the month. Included also are those who may have been afforded only partial relief, as, while the majority of those on relief are provided with food, fuel, clothing and shelter, in some cases relief recipients have been able to provide themselves with some of these requisites. Due to these factors, it is impossible from the information available to calculate exact monthly per capita costs, those shown being obtained by dividing the total monthly costs by the total number afforded relief during the month.

Table 1 shows by months the numbers of heads of families, and the total numbers including dependents and individual cases who have been afforded direct relief in the Dominion, as reported by the Provinces, from May, 1932, to November, 1936. A segregation of those in the dried out areas has been made, as the problem in those areas is not one of unemployment. From May, 1932, to August, 1934, the dried out area figures relate only to Saskatchewan for months subsequent to August, 1934, figures for Manitoba and Alberta are included, but the numbers for the latter provinces are comparatively small. Table 1 also shows the monthly total cost (including Dominion, provincial and municipal contributions) as reported by the provinces and the approximate monthly per capita costs.

Analysis of Relief Figures

Having the total numbers afforded direct relief in the Dominion (Table 1), an analysis or classification is necessary in order to get at the approximate number who would be affected by improved employment. Apart from those on relief in the dried-out areas, which are shown separately, the numbers include farmers and their families outside these areas. Included also are unemployable persons and their families, although the number of these is relatively small. The deduction of farmers and their families, unemployable persons and their dependents leaves the employable persons and their dependents which form the hard "core" of the relief problem. These are the numbers which should be affected by the expansion of employment.

The approximate numbers of employable heads of families, employable dependents, and employable individual cases on relief month by month are shown in Table 2 which also shows the dependent wives and children of employable heads of families, and the total number to be affected by employment conditions. This table has been established on the basis of information secured by the Department of Labour from the provinces in connection with the "Classification of Relief Recipients" which was in effect for the months of December, 1935, to August, 1936, inclusive. It is noted that the totals secured through the classification vary somewhat from the usual direct relief figures which are used in this memorandum, largely because of the inclusion in the classification figures of numbers of single homeless men cared for by the western provinces. In the classifica-

tion figures, the percentages which employable persons and their dependents were of the total numbers on relief remained comparatively constant over the months from December, 1935, to August, 1936, and as the period included winter and summer months the average of these percentages was applied to the totals shown in Table 1 to establish the number of employable persons and their dependents who were on direct relief each month from May, 1932, as shown in Table 2.

Numbers on Relief as related to Unemployment and Employment

A somewhat widespread conception exists that the numbers on relief in Canada represent the numbers who are unemployed. Such is far from the case since many unemployed persons are not on relief and the numbers on relief include not only employable persons and their dependents, but also unemployables and their dependents and farmers and their families.

As it is apparent that a large proportion of the new employment is going to the unemployed who are not on relief, it is important to present the best available information concerning the total numbers of unemployed persons month by month. The deduction from these numbers of the employables on relief leaves the number of employables not on relief. Here then are two of the reservoirs from which are drawn the additions to the payrolls, namely employable persons on relief and employable persons not on relief. There is a third reservoir, the boys and girls coming to working age who have not previously worked and the young people from farms who, as employment improves again become competitors for jobs. Due to reasons which are specified later the chances of relief recipients obtaining their share of the new employment are unequal to those of the other two classes.

Authoritative figures of unemployment are not available subsequent to the census figures of 1931. The trend of employment from month to month is indicated by the Dominion Bureau of Statistics index numbers of employment in industries other than farming, fishing, hunting, domestic service and highly specialized business. The index numbers are compiled from reports received from firms employing fifteen or more workers. (The number of firms reporting on November 1, 1936, was 10,054, the employees on their payrolls numbering 1,052,985. The index numbers are based on the average of the year 1926 being taken as 100. The index numbers month by month are shown in column 4 of Table 3.

The Department of Labour receives reports from local trade unions throughout Canada of the number of their membership not employed each month and the percentages of unemployment as reported by trade unions month by month are shown in column 6 of Table 3.

While these two indices show the trend of employment, they are insufficient in themselves to present quantitatively the current volume of unemployment. To appraise the amount of unemployment a calculation of the employable working force, i.e. the wage earners is necessary. Realizing the need of some quantitative guide to current unemployment conditions, the Bureau of Statistics in a study of unemployment include estimates of the number of wage earners unemployed each month and these estimates are shown in column 5 of Table 3. While the details of the methods used in making the estimates cannot well be included in this memorandum, intelligent use of the figures can scarcely be made without including a certain amount of the explanatory matter contained in the study.

The Bureau's memorandum points out that while the figures are only estimates every care was taken in their construction and in checking them against known facts and theories. That there might be no misunderstanding as to who were included in the estimates of the unemployed, the following definition is given *"The unemployed person in the following estimate is the person who could tell a census enumerator that he had worked as a wage earner or that he had a wage earning occupation, but is at present out of work (not through illness, accident, strike or lockout, etc.)"* This definition excludes boys and girls of working age who have never worked at a steady job, also members of farm families who would be wage earners when conditions are good. Attention is drawn to the fact that the proportion of wage earners to independent workers changes with employment conditions. When conditions are good the person is apt to rush to wage earning jobs, when bad to go back. Thus in depression the employable working force actually decreases. In estimating employment and unemployment the data used included (1) The labour union figures of members and persons unemployed, corrected for obvious defects and other defects demonstrated by analysis. (2) The population of 1931 was projected by age groups by means of a life table and the number gainfully occupied from month to month was calculated from this using the percentages gainfully occupied (as dis-

tinguished from wage earners) in 1931 by ages as a base. (3) The Bureau's index of employment. Figures included in the study make it clear that *when the tide turned the unemployed were not reduced "pari passu" with the increase in wage earning jobs.* As these jobs increased the unemployed had as competitors those persons who had left the ranks of wage earners.

Economic Tendencies and their effect on Employment, Unemployment and Relief

The total number of employable persons and their dependents (the numbers subject to reduction by expansion of employment) which appear in detail in Table 2 are shown also in Table 3 for convenience of comparison with the monthly indices of the physical volume of business and employment issued by the Dominion Bureau of Statistics, the Bureau's estimates of numbers unemployed and the percentage of unemployment in trade unions as reported to the Department of Labour.

The index numbers of the physical volume of business issued by the Dominion Bureau of Statistics have been selected as the measurement of economic conditions month by month from May, 1932. The index is compiled on a monthly basis from forty-five factors. These are designed to measure the composite trend of mineral production, manufacturing, construction, electric power and distribution. The factors used in this connection are available from month to month and are regarded as the most significant data available showing the current trend of the industrial output of Canada. The trend of the industrial output is one of the essential factors in the measurement of economic progress.

The index numbers of the physical volume of business are shown in column 3 of Table 3. Following the turning point in the first quarter of 1933 substantial improvement in the economic situation is indicated by the index numbers. The yearly average for 1933 was 79·7, for 1934, 94·2, and for 1935, 102·4. For the first eleven months of 1936 the average was 111 as compared to 102·1 for the same period in 1935, an increase of about 8 per cent.

That expansion in employment is not matching strides with economic recovery is evident from an examination of the figures in columns 3 and 4 of Table 3. Employment and business were both at their lowest in the early months of 1933, the business index reaching its lowest point in February and the employment index low point during the depression being at April 1st of 1933. For comparison with conditions in 1936, the month of April is taken as relief reached its peak in April 1933. From 69·8 in April, 1933, the business index advanced to 108·8 in April, 1936, an improvement of 55·9 per cent. During the same period employment moved from 76·0 to 97·4, an improvement of 28·2 per cent.

The lag between economic recovery and the expansion in employment is not peculiar to Canada. The quotation which follows is taken from Chapter II, "The Curbing of Unemployment," in the report of the Director of the International Labour Office to the Conference of 1936:—

> "Although there has been a fairly substantial reduction of unemployment it by no means corresponds to what might reasonably have been expected. In countries like Belgium, Germany, Great Britain, Sweden and the United States, where under the impulsion of an expansionist policy a marked upswing has taken place, the unemployed figure still remains abnormally and disproportionately high. This disturbing phenomenon cannot be conjured away and cannot be regarded as of negligible importance. As Dr. Ernst Wagemann, the President of the German Institute for Business Research, has pointed out, the increase of the population and the addition of new social strata to the wage and salary earning population have no doubt contributed to produce this result. But a great deal of evidence goes to support his further contention that "in this respect the problem of technological unemployment is apparently still more important, that is to say, the increasing failure to use manpower in ratio to the increasing intensity of the employment of capital. This phenomenon, which already cast a shadow over the last period of prosperity, especially in the United States, is clearly reappearing now that cyclical unemployment is diminishing." As was suggested in last year's report, displacement of labour by technical improvements, so far from being arrested by a depression, is apt to proceed at a more rapid rate. Employers, obliged to look for every possible economy in order to reduce costs, naturally seek first of all to cut their labour costs by introducing labour-saving methods and machinery wherever it is possible. With the return of better business the time for replacing old plants comes. Every alert manager naturally instals the best and the most modern machinery he can find, which in almost every case means some reduction, large or small of the labour force. Hence his production develops at a much brisker pace than the numbers on his pay-roll, and the national unemployment register remains swollen to an extent which in older days would have been impossible."

Again referring to the situation in the United States the Director's report states:—

> "Although industry is sweeping forward again, there is a considerable lag in the expansion of employment. It is estimated that private industry generally has reabsorbed some 5,000,000 workers since March, 1933. Nevertheless, according to the returns of the

American Federation of Labor, there were still 7,860,000 totally unemployed in December, excluding 3,541,000 persons employed on Government work. For this lag several explanations are put forward. It is asserted, for instance, that in many industries hours of labour are again being lengthened since the disappearance of the codes, with the result that the benefit to employment accruing under the forty-hour week is gradually being lost. It has further been pointed out that the revival in industrial production is only reflected after a certain interval in the production of services which normally employ nearly half the population. These causes have no doubt operated in a greater or lesser degree to check the progress of re-employment, but they are hardly sufficient to account for the wide gap between the pace of restoration in production and employment. That recovery has made and is still making rapid strides in the United States is certain, but it is equally certain that the problem of unemployment is far from being solved with the same rapidity."

Factors Preventing Relief Figures Reflecting More Fully Employment Trends

It is evident from a comparison of the figures in the columns of Table 3 that not only is there a lag between business improvement and employment, but also that unemployment and consequently relief figures are not decreasing in proportion to increases in employment. Percentage comparisons of employables and their dependents on relief in April, 1933, and in April, 1936, show an improvement of 19 per cent in the three years. Employment as indicated by the index numbers progressed 28·2 per cent in the same period, the Bureau of Statistics estimates of unemployment indicate an improvement of 22·8 per cent in the three years, while unemployment in trade unions showed a betterment of 38·4 per cent.

From information supplied by provincial officers administering relief, and gathered from other social and welfare authorities, the following reasons why relief figures are not showing greater improvement have been assembled:—

A—Those obtaining employment are not necessarily from the relief rolls, young people leaving schools and colleges, former employees not on relief and members of farmers' families returning to industry are securing much of the new employment. Among the relief recipients classed as employable must be thousands whose employability is diminishing, and whose chances of ever being employed again are problematical. In competition for employment with those who have never been on relief the chances of many relief recipients are far from equal. Until the available supply of more competent applicants is exhausted, a large proportion of employable relief recipients will be unable to return to industrial payrolls.

B—Part-time employment while assisting to increase the employment index does not affect the relief rolls to the same extent. Such employment when secured by a relief recipient enables him to go off relief for a portion of the month only. Cases such as these are included in relief figures though relief may have been granted for a few days only. That the on-and-off-relief movement is one of considerable proportion is evidenced from reports received from the provinces.

C—Seasonal employment to which Canada is peculiarly susceptible is an important factor in the relief problem. Seasonal workers who, before state aid was afforded, provided for periods of unemployment, now do not make this provision, returning to the relief rolls when their employment ceases.

D—The prevalent wage scales, it is claimed, are affecting relief. Hon. David A. Croll, Ontario Minister of Public Welfare, Municipal Affairs and Labour, speaking on relief recently is reported to have said, "So long as wages are kept at the present level we will have relief," and also, "But above all else stands the fact that wages have not kept pace with business improvement and a rising cost of living. In 1926 a man could travel along on his savings. To-day he isn't paid enough to get him by during his periods of idleness. Consequently he asks and gets relief. A higher wage level is the only solution to the present relief problem."

Miss Charlotte Whitton, O.B.E., Executive Director of the Canadian Welfare Council, in a recent article states "a new aspect of the situation arises that bids fair to become one of the most perplexing in the Canadian relief picture to-day. That is the payment of relief grants in hundreds of municipalities carefully calculated to provide the minimum needs of life, but which prove to be in excess of prevailing earnings or average income for full-time workers in their usual occupations in these same areas. And so the question of partial relief in part-time and too frequently in full-time employment has developed and the situation thus created is undoubtedly a factor of major importance in maintaining relief totals at fairly static levels." Continuing the article points out that relief supplementary to earnings was exploited as a wage subsidy to such an extent that many municipalities were forced to bring in regulations prohibiting the granting of such supplementary relief to full-time employment, which operates to hold back the worker with a family dependent

upon him from taking employment at such inadequate rates as to make life impossible even at the minimum that relief rates set. Included in the article was a comparison of relief and wage scales which demonstrated that the average earnings in some occupational groups were less than the relief schedules provided.

E—Relief recipients hesitate to accept employment in a municipality other than that in which they reside, because if out of work again regulations do not allow the obtaining of relief in either the new location nor in the municipality of origin.

F—To the relief rolls are always being added those out of employment who have been able to take care of themselves from their savings for a time, but who when their savings are depleted are forced to go on relief; as the period lengthens the number of these who reach the end of their resources increases.

G—Relief is afforded to families on the basis of the number in the family and when some member of the family secures work, the amount of relief is reduced but the number of dependents reported would not always be reduced.

H—Of the employable persons on relief a large percentage are unskilled labourers for whom the demand is still quite limited. Reports have been received from some sections of the Dominion of an actual shortage of some classes of skilled workers while there are many untrained men and young men and women unable to find employment.

I—Relief rolls are affected to some extent by the cessation of the movement of young people from Canada to employment opportunities in the United States. One of the Maritime Provincial Ministers is quoted as follows:

"During the depression the young men and women could not find work elsewhere in Canada or in New England. They stayed at home, and that is the reason why we now have a relief burden at the same time as we have the best employment conditions we have ever known."

J—The number of relief recipients securing employment is partially offset by those thrown out of employment and added to the relief rolls through the ever-increasing installation of labour-saving devices. This aspect of unemployment is quite fully dealt with in the quotation which has been included above from the report of the Director of the International Labour Office.

K—It is casting no reflection on the great majority of relief recipients to state that there must be in the numbers on relief a percentage who are reluctant to make any effort to obtain employment. Improved employment does not affect those in this category. Mr. Croll in the address from which quotations were previously made is reported as stating that the number of these in Ontario would be between five and ten per cent of the total number on relief.

Distribution of the Relief Problem

The effect of varying conditions in the different sections of the Dominion is apparent in reports which have been received from the provinces. Generally speaking substantial reductions from the high levels early in 1933 have been made in the figures for Eastern Canada and for British Columbia while the 1936 figures for the Prairie Provinces are higher than in 1933, due largely to the effect of drought conditions.

In Table 4 the percentages of the Dominion problem in each province in April, 1933, and in April, 1936, are shown, also the percentages which the population of each province bears to the population of the Dominion and the percentage of the population of each province who are on relief. These percentages indicate the trend of the relief problem in each province for the three-year period.

TABLE 4.—MONTH OF APRIL, 1933

NOTE:—The Provinces in each section of the table are listed in the order of the magnitude of the relief problem. The percentages of population are based on the Dominion Bureau of Statistics estimates of population for the years 1933 and 1936 respectively.

CANADIAN LABOUR ORGANIZATIONS PRESENT MEMORANDA OF PROPOSED LEGISLATION TO THE DOMINION GOVERNMENT

ON December 18, 1936, the Trades and Labour Congress, the Confederation of Catholic Workers of Canada, and the All-Canadian Congress of Labour, each presented to the Dominion Government, a memorandum containing a program of legislation recommended by organized labour represented by these organizations.

The delegations were received by the Prime Minister, the Right Hon. W. L. Mackenzie King and ten other members of the Dominion Cabinet, including the Hon. Norman McL. Rogers, Minister of Labour, Hon. C. A. Dunning, Minister of Finance, Hon. Ernest Lapointe, K.C., Minister of Justice, Hon. T. A. Crerar, Minister of Mines and Resources, Hon. C. D. Howe, Minister of Transport, Hon. J. L. Ilsley, Minister of National Revenue, Hon. J. C. Elliott, K.C., Postmaster-General, Hon. Ian Mackenzie, Minister of National Defence, Hon. Fernand Rinfret, Secretary of State, and Hon. J. E. Michaud, Minister of Fisheries.

Trades and Labour Congress of Canada

Welcoming the delegation from the Trades and Labour Congress, the Prime Minister referred to the gathering as one of two parliaments meeting together—the parliament of government and the parliament of industry. Mr. P. M. Draper, President of the Congress introducing the delegation of about 60 persons, stated that it was representative of every province in the Dominion, the organization having 1,563 branches across the country, with 150,000 members.

The memorandum, read by the President of the Congress, opened by stating that it represented "the considered views expressed by the representatives of the wage earners in attendance at our annual convention in Montreal in September last." (LABOUR GAZETTE, October, 1936, pages 891-897).

Peace and Democracy

Under this heading, the Congress recorded approval of a "most pacific attitude in international dealings," and declared itself as being "always in support of any steps taken by the Government to improve international understanding and goodwill." The Congress endorsed the "past activity of Canada toward world peace through disarmament, the League of Nations, the World Court and the International Labour Organization" and stated that "future efforts along the same line will also have our unqualified backing." Deploring the tendency toward dictatorships in some countries, the Congress asked the Government to take necessary steps to prevent their growth "if at any time any faction seeks to teach such political principles in Canada."

Unemployment and its Relief

Dealing with this subject the recommendations of the Congress were as follows:—

"Nationally, unemployment continues to be our most grave problem and the one which must receive first attention in any consideration of labour and social matters. At the moment probably more than one-eleventh of our people are depending upon Governments for their material support, a situation very largely brought about by the absence of jobs for those seeking them. It is true that we have no single cure to suggest to remedy the situation but there are certain suggestions looking to a broader provision of work for which we seek the most earnest and favourable consideration.

Provision of Work.—"Although public works have given quite a volume of employment in recent years, the steady level of those in receipt of direct relief is of itself evidence that jobs from this source have not been numerous enough to effectively reduce the numbers of the unemployed. We feel confident that more could be done in this way with advantage to the public and at the same time to many competent workers now idle. We submit that carefully planned public works are an asset to the community which justify their cost, while help to the building industry assists indirectly other industries. Therefore, we believe that if greater financial provision be made for public works this year some reduction would be made in the numbers on relief, while the services of at least some of the unemployed would be turned to account in erecting the projects provided for, and we would earnestly urge that this be done. Projects we have in mind are the renovation of public buildings, new buildings and the elimination of level railway crossings.

"In reducing the unemployment through public works, we feel that the social value of using the services of persons otherwise idle, but not yet on relief, should be stressed. It is important that where possible the morale of our people should be kept up by giving them an aim in life such as is provided by the sense

that their services are entering into the building up of our nation, rather than being allowed to rust out."

Housing.—Referring to the subject of housing, the Congress pointed out that last year the broadening of the housing legislation of the year before had been recommended, and stated that "we are glad to learn through press announcements that the Government contemplates changes at the next session. The measure of success met with under the Act as it now stands could be taken as an indication of the stimulus to employment which is possible through that source, rather than as an end in itself. The difficulties of persons able to meet payments on a home over a number of years but unable to finance too large a down payment should be met if the Act is to be successful, as also should the case of smaller towns where even the facilities provided in the Act for the cities have not been so readily available. The Home Improvement Campaign is a practical measure and a further aid to building, but here we would suggest a lengthening of the period of repayment."

The Congress pointed out that slum replacement must not be overlooked in any successful housing scheme, and that from a social as well as from the employment aspect, slum clearance was a necessity. The Congress suggested that should it be found necessary, the Government should attempt to enlist the partnership of the provinces in a slum clearance project.

Homeless Men.—Abolition of the relief camps during the past year received the commendation of the Congress. However, the suggestion was made that steps be taken "to prevent abuses which might in the long run exceed in gravity the abuses which developed through the camps," such as the establishment of soup kitchens, and the use of former camp men on railway construction that should be carried out at regular wages and working conditions.

Hours of Work.—On the general question of hours, the Congress reiterated its conviction "that modern methods of production make possible and necessary a much shorter working day than is now the custom." The hope was also expressed that a maximum work day of six hours, and a work week of thirty hours might be established. In this connection, it was suggested that the "Government might give a lead to private industry by providing for thirty hours as a limit on public works." It was also pointed out that, in the event of any reduction in working time, wage levels should remain the same "in order to maintain, if not to increase the purchasing power."

National Employment Commission.—Restating its endorsation of the National Employment Commission the Congress' memorandum stated that "we trust that its special studies of housing, unemployed youth and unemployed women, as well as its general studies of employment, unemployment and relief may result in substantial betterments required in each of the fields mentioned." Dominion grants for vocational education and other similar measures were regarded by the Congress as essential first steps to establish the youth of the country in gainful employment. On the matter of public relief, the Congress reiterated its adherence to the view that "Dominion administration of all relief is called for by the national nature of the relief problem, and in the interests of uniformly fair administration."

Transportation of Workers.—The Congress suggested that provision for transportation of workers to employment at a distance would lessen illegal travelling of the unemployed with a consequent reduction in the number of accidents suffered by the "transient" class. In this connection, it was stated that "low transportation costs, with sums loaned for the purpose in some instances, would meet the situation and in some few cases at least would ease the burdens of unemployment."

Social Insurance.—The Congress reserved opinion on the Eight-Hour Day Law and the Employment and Social Insurance Act in view of the fact that this legislation, at the time was before the Privy Council for a judicial determination regarding its validity. The submission was, therefore, confined to the principle of unemployment insurance which the Congress has supported for several years. In this regard the Congress submitted that in order "to assist both industry and the worker to make provision for periods of unemployment out of earnings, we firmly adhere to the idea that a national contributory unemployment insurance plan is a modern necessity, a view reiterated by our 1936 convention."

The Congress also urged that a national system of health insurance be established. Attention was drawn to the adoption of health insurance plans in certain provinces but the Congress felt that Dominion support should be given before people would have "reasonable safeguards as to care in times of ill-health."

Referring to old age pensions, it was suggested that the age for pension eligibility be reduced from 70 years as at present to 60 years. "If this were done," it was stated, "the retirement of those in industry at 60

years of age would remove many whose present employment might be taken by younger unemployed persons." The submission also added that the Congress considered that "the present rate of old age pensions is not sufficient to provide the scale of living to which pensioners should be entitled and that the present amount of the pension should be increased."

The Congress also urged that the Old Age Pension Act be amended to provide pensions at a relatively early age for the blind. Similar consideration was also requested for those who are "industrially unemployable."

It was requested that an amendment to the Old Age Pension Act be made to provide exemption from the calculating of pensions of any individual estate of not more than $5,000 in value.

Wage Policy

"To restore a balance between production and consumption a greater purchasing power on the part of the masses is needed and the only method available is through increased wages. In this matter the Government has a responsibility to lead and we submit that if steps were immediately taken to restore salaries and wages of all Government employees to their former levels the example to industry would be of great benefit in the desired direction. At the same time the Dominion Government might make it a matter of standing policy to encourage a betterment of wage levels generally, in order to increase consumption, to build up living standards and to eradicate partial relief.

"To encourage fair wages and conditions in industry, and to overcome some of the objectionable working conditions exposed in recent public enquiries, we ask that the Government insist upon the union label on goods and equipment purchased, the label being a guarantee of union conditions in the plant of manufacture.

"To ensure observance of fair wage schedules in the Maritime Provinces, we ask the appointment of a Fair Wage Officer of the Department of Labour in that area.

"Where it is difficult to determine fair wage rates to apply on Government work as a matter of policy we would recommend adoption of the trade union scales obtaining in the nearest city, for in most of such cases labour must be brought from the city.

"To prevent exploitation of the workers by tariff protected industries, we suggest that such industries be required to pay fair and reasonable wages and work standard hours in return for the protection they receive from the Government of the country."

British North America Act

Expressing regret that no progress was made in the last year on the proposed amendments to the British North America Act, the Congress reiterated its opinion concerning the required amendments as follows:—

1. To ensure full competence of the Federal Government to enact any social and labour legislation affecting Canada as a whole, and particularly that included in the draft conventions and recommendations of the International Labour Office (League of Nations).
2. To permit Federal control over industrial and commercial activities essential to ensuring observance of proper labour standards and to eliminate unfair competition between provinces.
3. To empower the Federal authorities to regulate highway transport, thus eliminating unsafe standards of operation and unfair competition with other established methods of transportation.
4. Restrict powers of the Senate to veto any bill passed at three separate sessions of the House of Commons, which practice is in harmony with that of the British Parliament.
5. Abolish appeals to the Privy Council.

Banking and Financial Matters

The memorandum, urging the complete nationalization of the Bank of Canada, stated that "the taking over of the majority control of the Bank of Canada by the Dominion, in itself a most desirable step, merely serves to emphasize the importance of public rather than private control of banking and finance." It was suggested that the next step be taken, namely that "the Dominion assume in its entirety the control of the Bank to give full national direction."

Capitalization.—The Congress recommended that the evils of high prices and low wages following over-capitalization in business might be removed by legislation, requiring that company dividends be permitted only on the money actually used as capital. The suggestion was also made that the entire question of capitalization, stock sales and promotions might be enquired into to the advantage of all classes.

Interest Rates.—Although interest rates had been reduced in recent years, the Congress expressed the opinion that further reductions are necessary and it was hoped that "the Government will exert its influence to further reduce rates on public loans, mortgages and other debts."

Income tax.—In this connection, the Congress requested that sums paid into trade

union funds for repayment in relief of distressed members be exempt from income tax, as are contributions paid to other charitable works.

At this point, in the submission of the Congress' memorandum, Mr. Wm. C. Golby, Vice-President of the Photo-Engravers' Union elaborated on this request, pointing out that for the "last six years members of our organization have contributed a percentage of their weekly wages to keep our unemployed workers," and that this sum had ranged from $260 to $440 per year for each member. Mr. Golby stated that exemption from income tax on this money had not been granted by the Government. He claimed that members contributing to this unemployment relief fund are being handicapped in three ways. He stated that there was the personal loss through members not being able to enjoy the advantage of money paid into the fund, then members had a further loss through having to pay income tax on money that they have not had the advantage of using and lastly, although the trade union activity in this regard resulted in many men being kept off provincial or municipal relief for the past six years, the union members were further taxed under the general provincial or municipal taxation system for the carrying on of general relief work. Mr. Golby expressed the belief that there was ample scope under the income tax laws, to permit of such contributions being exempt from income tax because of funds paid out for charitable purposes. Serious consideration of the request was asked in order that the "unfair burden on our membership may be lightened."

Farmers' Creditors Arrangement Act.—Commendation of this Act was expressed in the Congress' memorandum and it was urged that its benefits be extended to include urban dwellers.

Currency.—In order to provide funds for an extensive scheme of public works, the Congress proposed that "the Dominion Government issue non-interest bearing currency to a reasonable amount." It was suggested that the special issue might be retired gradually over a long period, meanwhile being represented by the real worth of the buildings and other projects produced.

Industrial Disputes Investigation Act

Extension, "with or without the co-operation of the provinces," of the benefits of the Industrial Disputes Investigation Act to include other services such as distribution of milk, bread, coal; motor transportation; bank employees and public servants, was recommended.

Shipping and Harbour Matters

The Congress feared "that the centralization of harbour control by removing the local incentives for improvement and betterment of harbour facilities, would stop local developments of the different harbours and thus interfere with shipping," and suggested that the new system be made the subject of periodic studies to see whether it was as efficient as the old "and if not that the system of local boards be reverted to immediately."

Believing it to be economically possible, the Congress also recommended that "stabilization of employment be made among those engaged at the various harbours under Dominion control avoiding seasonal lay-offs and giving year round work." The appointment of an inspector of gears, tackles and working ways at Halifax was requested.

Railway Situation

The Congress re-affirmed its view that "railway amalgamation in whole or in part, is not a desirable thing in Canada at this time," and expressed its "direct opposition to any steps which might be proposed to accomplish such a purpose."

Human Safety

The Congress made recommendations regarding the elimination of railway crossings, and advocated legislation to secure full effect of the recommendations of the Dominion-Provincial Conference of 1933 on Highway Safety and control of commercial motor traffic. Legislation was sought to protect building workers from hot rivets or other objects frequently dropped in the construction of tall buildings. The Congress further considered that the eyesight of numbers of citizens needs to be protected from the unregulated and unscientific sale of cheap imported lenses for spectacles. The compulsory installation of sprinkler systems in public buildings to protect life from fire was also recommended. Attention was drawn to the fact that an Elevator Safety Code was being drafted by interested parties and would be advanced as a proposal for legislation. The Congress endorsed this code as a subject for legislative action.

Civil Liberty

On this subject the Congress submitted the following: "We suggest that the right of the workers to organize for mutual assistance should be a fundamental of personal liberty, yet we are repeatedly reminded by concrete cases that in certain industries employees are

prohibited by their employers from joining a union. While the courts have recognized for about a century in a negative way the right to organize, the workers are protected by no positive law on the subject. We ask that Parliament, in so far as it has authority, give the workers the specific right to organize, providing suitable penalties for any interference with that right. Further, we would again raise the point of injunction interference with peaceful picketing, to suggest that a clarification of the law be made to protect trade unionists in their rights."

At this point in the presentation, Mr. Draper called on Mr. Wm. P. Covert, Vice-President of the Theatrical Stage Employees and Moving Picture Machine Operators' Union, who amplified the remarks made in the submission concerning the right of trade unions to peaceful picketing and asked the Government to assist in clarifying the existing situation which enables the employer to place an injunction on such action of trade unions.

Holidays with Pay

In order "to increase the welfare of our citizens and to ease the burden of unemployment," the Congress urged that "legislation be adopted requiring all employers to give their employees two weeks holidays with pay annually." The Congress also recommended that "as Armistice Day is not generally observed as the public holiday intended by Parliament, we suggest that the Dominion Government give the day as a holiday with pay to all its employees, including railway employees whose services can be spared, in order that other employers may be encouraged to do likewise."

Public Ownership

Attention was drawn to the fact that the Congress' convention had concurred in a resolution embodying a request that the Federal Government set up a Public Ownership Commission to study and report on fields to which public ownership might be extended with public advantage, "particularly in those matters involving public ownership of natural resources."

Investigation of Business Practices

The Congress expressed approval of exposing to publicity at all times "industries known to charge high prices or pay low wages while making excessive profits." The Congress also urged that "corrective legislation" follow the textile and coal investigations.

Miscellaneous Requests

Under this heading the Congress reiterated certain requests which had been presented in detail on previous occasions. Such requests included:

Extension of Unfair Competition Act to cover registration of shop cards, emblems and Union Services; strict enforcement of the Immigration Act and Regulations respecting contract labour, and "the refusal by the Government to participate directly or indirectly in any scheme of subsidized immigration until those resident in Canada are assured of the opportunity to maintain themselves by their own labour."

Amendment of the Election Act to provide that ballot papers state the political party which the candidate represents instead of a description of the occupation followed was also requested. It was further asked that proper accommodation be secured for polling booths instead of the use of rooms in private homes.

Other requests were as follows:

Amendments to the Shipping Act, already submitted to the Minister of Transport.

Amendment of the Copyright Act prohibiting printing from type not set and plates not made in Canada.

Superannuation provisions for mechanical employees of the Dominion, to place them on an equal footing with other Government employees.

Protection of consumers, by requiring all food containers to be of standard weight or measure.

Revision of Alien Labour Act and its administration placed with a Minister of the Government.

Labelling of poisonous materials injurious to the health of workers.

Abolition of all grants for Cadet Training in Schools.

Confederation of Catholic Workers of Canada

The delegation of the Confederation of Catholic Workers of Canada was received immediately following that of the Trades and Labour Congress, and welcomed by the Prime Minister on behalf of the Government.

The Confederation, in the opening paragraph of its memorandum, pointed out that it was the fifteenth time since its foundation that it had appeared before the Government in order to submit proposals for legislation, which it believed would improve the lot of the working class.

Professional Organization

The memorandum first emphasized the necessity of organization as constituting "one of the most effective remedies for existing social ills in this order," pointing out that: "Those engaged in the same activities possess common interests and public administrators would find their own task simplified by facilitating united action on the part of those interested, in professional spheres."

Continuing, the Confederation stressed two particular examples "in which the aid of the state could both favour professional organization and improve living and working conditions," viz.—bank employees and workers in the textile industry.

The Textile Industry.—Dealing particularly with the organization of such employees the memorandum observed: "Without doubt, the Royal Commission appointed by the Government helped to make known the living and working conditions of employees in the textile industry, and the latter hope for much improvement as a result of the report which will be presented by the Commission, and the attention which it will receive from the Government, but we mention their case because it is particularly pitiful.

"We suggest that following the presentation of the report by the Royal Commission, the Government could constitute the said Commission a permanent body whose duty it would be to help bring about the realization of a collective labour agreement in the textile industry of the Province of Quebec. This permanent organism could then work for the application in Ontario of the Province of Quebec collective labour agreement, including the scale of wage rates adopted for this Province. This extension of the agreement to include Ontario could be authorized by the issuance of an order under the Industrial Standards Act. Finally, the permanent Commission could act as an arbitrator in assuring the enforcement of the collective agreement and of the order already mentioned."

Bank Employees.—Acting upon the suggestion of a certain number of bank employees, the C.C.W.C. petitions the Dominion Government to establish a commission of enquiry into the living and working conditions of bank employees in Canada.

Cost of Living

The Confederation memorandum expressed some criticism of what it considered to be incomplete statistics pertaining to the cost of living as published in the LABOUR GAZETTE. This section of the memorandum was as follows:—

"The LABOUR GAZETTE publishes official statistics on the cost of keeping an average family, but the statistics are incomplete, comprising only the cost of food, rent, heating and lighting. The C.C.W.C. draws the attention of the Honourable the Minister of Labour to this point, so that the statistics may be completed by taking into consideration the following items: clothing, education, doctor's fees and medicines, divers taxes, insurance, church and union expenses, recreation, renewal of home furniture, transportation, delicacies, etc., etc. in order that the true cost of maintaining an average family may be established with greater precision by the LABOUR GAZETTE. Furthermore, it is perhaps worth while to note that some employers do not hesitate to make use of these statistics in fixing the wages of their employees.

Communist Propaganda and Trade with Russia

Under these headings the memorandum made several strong recommendations. In regard to communist propaganda the Confederation drew the attention of the Government to its existence and requested that the Government "prevent the admission of Communists to Canada," Dealing with trade with Russia the memorandum declared:—

"In Soviet Russia, the only recognized party is the Communist Party. It is equally recognized that this country uses every means at its disposal to facilitate the dissemination of communism throughout the World. In order to create a reaction against the nefarious work being accomplished by Russia, the C.C.W.C. makes the following suggestions to the Dominion Government:

1. That Canada, as a member of the League of Nations, cause Soviet Russia to be tried at Geneva.

2. If proof is available that Russia is disseminating communist propaganda by means of commercial relations, that Canada propose that Russia be disbarred from the League of Nations:

3. and That, as penalty, members of the League of Nations be invited to discontinue all commercial relations with Soviet Russia."

Social Legislation

In the sphere of social legislation the Confederation expressed its keen interest in the decisions of the Supreme Court, and considered "that the present Government would be well inspired if it placed this legislation in effect, provided the Privy Council judges that the Dominion Government possesses the necessary jurisdiction in the matter."

People's Banks

"Considering the remarkable services rendered to the working class by the People's Banks and in view of the unfair competition which they have to meet from the chartered banks, the Confederation requests that protective legislation for these institutions be passed."

Companies Act

The Confederation indicated that it would approve of uniformity of legislation concerning stock companies, but it suggested to the Government "for the present that the Dominion Companies Act be amended so that the directors of joint stock companies carry a greater measure of responsibility under the Criminal and Civil Code; and that over-capitalization, which is commonly referred to as stock watering, be forbidden by law. In addition, it could be provided that joint stock companies possessing Dominion charters publish in the CANADA GAZETTE the list of their Boards of Directors, the salaries, emoluments or fees of the latter, the number of shares issued by each company and the number of shares held by each member of the Boards of Directors."

Other Recommendations

Supplies Contracts.—The Confederation requested the Dominion Government to ensure that in all contracts for supplies, clauses identical with those in building contracts, relative to wages and hours of labour, be included.

The Boot and Shoe Industry.—In order to afford "special protection to footwear manufacturers who pay reasonable wages to their employees" the Confederation suggested to the Dominion Government that the union label be insisted upon when it awards a contract for footwear supplies.

Fraudulent Bankruptcies.—The Confederation requested the Dominion Government to provide heavy penalties in cases of fraudulent bankruptcies and that those found guilty of this offence be forbidden to re-engage in business before a stipulated period of time shall have elapsed.

Delegation to Geneva.—The delegation reiterated its position in the matter of labour appointments to sessions of the International Labour Conference. It suggested that the labour delegate "be appointed alternatively from the most representative labour organizations."

Night Work in Bakeries.—The Government was requested to give effect to the draft convention of the International Labour Conference adopted in 1925 which provided for the prohibition of night work in "establishments for the production of bread, pastry, and other similar products."

Permanent Inquiry Committee.—The Confederation suggested the appointment of a permanent inquiry Committee "which would compile all necessary information on work and living conditions of employees in divers enterprises," and publish same in reports. By this means it was considered that a number of abuses would be eliminated.

Matrices and Electrotypes.—"Because of the great harm suffered by the Canadian printing industry, the Confederation asked the Dominion Government "to prohibit the importation of all matrices and printed electrotype plates."

Stamps on Handbills.—The Confederation requested the restoration of the former rate of ½ cent postage on hand bill printing, believing that such action would provide more employment in the printing industry.

All-Canadian Congress of Labour

In presenting its memorandum of proposed legislation the All-Canadian Congress of Labour commended the Government on the legislation passed at the last session of Parliament, and considered the opinion "that the improvement in business conditions, especially in foreign trade but also in the internal trade of the country, is due considerably to the policies adopted by the Government." The Congress submitted, however, "that the abolition of the evils which still afflict the people, and the attainment of a condition of economic security on a national scale, demand much more drastic changes than have been attempted by the Government up to the present time."

Recognizing the obstacles in the way of social and economic reform the Congress considered that from a legislative standpoint the most important of these is the division of jurisdiction between the Dominion and Provincial Governments which has caused the suspension of a number of enactments which were passed in accordance with conventions of the International Labour Organization. "It would appear," the memorandum stated, "that modern conditions make it imperative that the British North America Act be amended with a view to bringing all matters of national concern within the jurisdiction of the Dominion Government."

Anticipating opposition from certain groups "toward any measures which would bring about a more equitable distribution of the wealth of our country," the Congress was convinced that "the great mass of the population will support the Government in any efforts it may make to meet human needs, to establish social justice and to promote the common good."

Continuing, the memorandum while refraining from suggesting "any interference with the legitimate and reasonable rights of any group of Canadian citizens," considered "such rights are neither legitimate nor reasonable when they involve the establishment of industrial monopoly, when they involve the exploitation of natural resources without a proper return to the people, or when they involve an infringement of the equal right of the workers to earn a livelihood for themselves and their dependents."

The Congress further believed "that a stage in the industrial history of the Dominion has been reached at which the Government must seriously consider the desirability of acquiring, in the public interest, such natural resources and basic industries as may be essential to the provision of a high standard of living, and the operation of those industries under Government ownership and control. As a first step in this direction, plans might be adopted whereby the unemployed workers of Canada would be put to work in supplying their own requirements."

The initiation of such a program with its attendant study of the economic situation in Canada, it was suggested, could be referred to the National Employment Commission.

Commenting on recent disclosures, in regard to industrial conditions, the Congress drew attention to certain "discriminatory practices, involving the dismissal of workers, the organization of their employees into Labour unions, and thus made it impossible for the workers to obtain such protection as they might otherwise have secured by means of collective bargaining."

In this respect, it was considered that the Government "may at the least insist that Canadian firms which enjoy the benefits of tariff protection, shall recognize the right to organize and bargain collectively regarding wages and conditions of employment, and may take vigorous action, if necessary, to compel employers to do so."

British North America Act

Expressing concern that the Supreme Court of Canada had ruled that certain social legislation is *ultra vires* of the Dominion Parliament under the terms of the British North America Act, the Congress referred to a resolution adopted at its recent convention in which it was requested that representations be made to the Government, with a view to securing the amendment of the B.N.A. Act so "as to give the Parliament of Canada full jurisdiction over all legislation covering matters of national rather than of provincial interest."

Carrying the wishes of its convention the Congress memorandum urged that "the matter of jurisdiction, as between the Dominion and the provinces, is one which ought to be dealt with at the earliest possible moment. It may be pointed out, without reflection upon the framers of the British North America Act, that they could not possibly have foreseen the developments of modern industry, and the need for legislative control of industry which is interprovincial or national in scope. Not only the workers, but the people of Canada generally have the right to demand that the basic constitutional document of Canada be amended in such a manner as to permit the proper exercise of the will of the people through Parliament.

Wages and Hours of Work.—Continuing its presentations for the amendment of the B.N.A. Act the memorandum added: "The Congress recognizes that, in view of the facts set forth in the preceding section, it is impossible to take any action with respect to the establishment of minimum wages or the limitation of hours of work. In the circumstances, the Congress strongly urges that, if the decision of the Privy Council sustains the judgments of the Supreme Court of Canada, an effort be made, not only to amend the British North America Act, but also to strive for some basis of understanding between the Dominion and the Provincial Governments with respect to such matters.

"It is the considered opinion of the Congress that the regulation of wages and hours of work should be under the direction of a national authority. There is no need to stress the necessity for the setting up of a minimum below which wages should not be allowed to fall, since living standards must be based thereon. It is also essential, however, that the progressive lessening of the hours of labour be brought about, as this is an effective means of extending employment among a larger number of workers. The reduction of hours of labour must not, however, involve a decrease in the incomes of the workers, which are already on a level far below that which the productive capacity of industry would warrant."

The Unemployment Situation

Expressing gratification that "employment conditions had improved somewhat during the present year" and commending the efforts of the Government in this respect, the memorandum agreed with the Prime Minister's statement that unemployment was "Canada's most urgent national problem," and emphasized that this problem was of such vital importance as to be kept continually in the foreground.

The Congress stressed the fact that technical developments had enormously augmented the productive capacity of the nation with the resultant displacement of manual labour. In consequence, opportunities for employment formerly open to new generations of workers, were now closed. "Not only is it improbable," the memorandum observed, "that many workers who have been laid off during the years of industrial depression will ever again find profitable employment, but great numbers of Canadian young people, estimated as high as 400,000, have been unable to find employment of any kind."

It pointed out, however, that "with the evident economic distress which still prevails so far as large masses of the Canadian population are concerned, there is ample work to be done. The raw materials which might be used in production are available, and there is an abundant supply of labour. In the circumstances, the problem is primarily one of organization, and in this matter the Government must take the lead, given the apparent inability or unwillingness of the leaders of industry to undertake to solve the problem without the intervention of the Government."

While approving of the abolition of relief camps and the placement of workers on farms the Congress submitted that the employment of relief camp workers on railways at prevailing rates of wages was unfair to organized railway workers having standards of wages and conditions established by agreements with the railway companies. The Congress urged that in future these workers be engaged "without detriment to the re-employment of railway workers."

The Building Industry

Referring to conditions in the building industry the memorandum stated:—

"It is with a deep sense of gratitude that the Congress commends the efforts already put forth by the Government to promote home building and repairs through the provision of loans to be utilized for these purposes. But it is submitted that the plans already adopted have been inadequate to relieve the situation to any great extent, because comparatively few, if any workers, with low incomes, have been able to provide the initial amounts involved in the building of homes. The Congress believes that it would be in the public interest to enlarge the housing scheme in such a manner as to enable any employed worker to build or purchase a home, and to repay the cost therefor including interest at a low rate.

"The Government is also urged to continue and extend its public works program, and to include provision for slum-clearance and housing, with the co-operation of provincial and municipal governments. A study of the policies adopted by the British Government in this respect, if this has not been made, would, in the opinion of the Congress, prove advantageous, and the investigations already undertaken by interested Canadian citizens indicate that there are a number of municipalities in which a beginning might be made in putting housing and slum-clearance plans into effect."

Holidays with Pay for Industrial Workers

Attention was drawn to the draft convention of the International Labour Organization providing for annual holidays with pay for industrial workers in such countries which may ratify this convention. In seeking Government action to insure the application of this convention in Canada, the Congress was of the opinion that its provisions could be immediately applied to a number of employees of the Canadian National Railways. In this regard, the memorandum stated that: "The Government will readily appreciate the disappointment and sense of injustice felt by low-paid workers in the railway shops when they are laid off without pay during the period when their fellow-workers in the skilled trades, who are paid a much higher rate of wages, are given holidays with pay. This condition has prevailed for a number of years, and we suggest that, pending the adoption of legislation providing an annual holiday with pay for all industrial workers, the Government set an example by the application of the principle in the railway industry over which it has control."

Railway Amalgamation or Unification

Registering strong opposition to proposals for railway amalgamation the Congress advocated "that the Government take whatever measures are necessary to protect the Canadian National Railways against unfair and unwarranted criticism, and to oppose any schemes, no matter from what source they may come, which would tend to destroy the integrity of the system, or limit the service which it is now giving to the people of Canada."

Representation on Government Bodies

The Congress reiterated its request, as a national labour organization, for representation on Commissions, Boards, etc. In this respect the memorandum drew attention "to the fact that the Labour representative on the Board of Directors of the Canadian National Railways was chosen in a manner unfair to the employees organized in national unions."

The Congress also felt in view of the "important part played by the employees in the efficient operation of this public utility, the appointment of two directors representing them, one of whom would be nominated by the nationally-organized workers, might very properly be conceded by the Government."

It was hoped that the Government would favourably consider the appointment of a director to be chosen by the Canadian railway labour unions.

Government Employees

The memorandum recommended the extension of the merit system in the Civil Service and the restoration of normal salary rates.

League of Nations

The Congress concluded its representations by appealing to the Government "to strengthen the League of Nations and its associated agencies, not only by the utmost participation in the activities of the League, but by helping to arouse Canadian public opinion in support of the aims and purposes of the only international organization which offers any hope of peace to a distressed world."

Replies of Prime Minister and Ministers

At the conclusion of each delegation's presentation, the Prime Minister, Rt. Hon. W. L. Mackenzie King, and the Hon. Norman McL. Rogers, Minister of Labour, thanked the organization for its representations. The Prime Minister said he would ask each member of the cabinet to give personal attention to an examination of the brief submitted and particularly to the points pertaining to the work of their individual departments, with a view of bringing such matters before the cabinet for its further consideration at a later date.

In dealing with the memorandum submitted by the Trades and Labour Congress, the Prime Minister, in reminiscent mood, referred to his long association with labour problems, and recalled his period of service in the Department of Labour, as the first Editor of the LABOUR GAZETTE and subsequently as Deputy Minister. The Prime Minister expressed the view that the history of the labour movement in Canada would be reflected in the records of the Trades and Labour Congress memoranda and in the LABOUR GAZETTE. Mr. King referred to the contrast in methods of solving problems in Canada, compared with other countries and the reliance in Canada on reason rather than force.

The Hon. Norman McL. Rogers, Minister of Labour, assured each delegation that its memorandum would receive the early attention of his department. Speaking briefly concerning the Trades and Labour Congress' reference to relief works, the Minister of Labour said that for the first time agreements for joint works with the provinces had stipulated that 50 per cent of workmen must be taken from relief rolls. He added that this quota had been exceeded in most provinces. Dealing with the closing of relief camps, Hon. Mr. Rogers pointed out that it should be definitely understood that the work done by the men taken from the camps and placed in railway maintenance work was part of a program "in excess of the normal budget of the railways," and this factor, he continued resulted directly in more work for "regular maintenance of way men." (This observation by the Minister of Labour also answered a similar request contained in the memorandum of the All-Canadian Congress of Labour).

In thanking the Confederation of Catholic Workers for their presentation, the Prime Minister assured this delegation that their representations would receive the careful consideration of the departments directly concerned.

In the memorandum of the Confederation of Catholic Workers was a recommendation concerning a proposed course of action in regard to Russia. While the Prime Minister, in his reply, did not specifically refer to this section of the presentation, he stated that in view of the problems now confronting the world this was no time to set one nation against another or class against class.

The Hon. Ernest Lapointe, Minister of Justice, speaking in French, dealing with the Confederations' requests concerning Communism, said that the Government did not like Communism nor did it like other forms of government alien to the democratic principles which prevail in Canada; but this was not a time to stir up hatreds among countries, Mr. Lapointe warned, and suggested that the

best way to combat communism in Canada was by so caring for the people that forms of government unwelcome to democracy would not gain a foothold here.

The Minister of Labour also spoke briefly, thanking the delegation from the Confederation of Catholic Workers for their representations. The Hon. Mr. Rogers said that such annual presentations by labour organizations served as one tangible reminder to the Government of its responsibility to deal with social and economic problems.

In thanking the All-Canadian Congress of Labour for their presentation, the Prime Minister said he wished to congratulate those responsible for the drafting of the memorandum which disclosed a large "element of understanding of the position of others and the problems involved." The Prime Minister assured the delegation that the proposals made in their memorandum would receive early and careful consideration of the particular departments concerned and the Government as a whole.

LEGISLATIVE PROPOSAL OF LABOUR ORGANIZATIONS IN MANITOBA

A memorandum of proposed legislation was submitted recently to the Manitoba Government by the Winnipeg Trades and Labour Council, the Manitoba provincial Executive of the Trades and Labour Congress and the Joint Legislative Committee of Railway Train Service Organizations.

Regulation of Bus and Truck Competition

In first place on the agenda of legislative requests was the regulation of bus and motor truck competition. The memorandum, after defining the requirements of adequate transportation in terms of safety, convenience and dependability and emphasizing the necessity of equitable regulations governing competing systems, declared as follows:—

"Existing regulations, however, seem to be entirely inadequate as to effective control and supervision due largely to inefficient enforcement. They do not impose equitable taxation on the user of the highway for revenue purposes, are not uniform and not sufficiently restrictive to prevent a duplication of bus and truck service in territory amply served by the Railways. That the steam railways are well equipped to furnish reliable and efficient service, under the most adverse climatic or other conditions throughout every day in the year, is now generally recognized.

"Buses and trucks, however, provide only intermittent service, their operation being interfered with by snow or rain, which often makes the highways impassable for days at a time, and requires a large expenditure of public money to keep the roads open during the winter months."

In support of their contentions for adequate regulations and control, the organizations incorporated in their presentation the resolutions submitted to the Dominion-provincial conference of December, 1933. These included the establishment of uniform rates for highway transportation, fair standards of wages and hours, standards of physical fitness, etc.

Trailers were classed as a "menace to the public" and their abolition was advocated, or if their use was absolutely necessary then only one trailer be allowed behind any truck or bus.

Special Income Tax Act

The legislation known as the Special Income Tax Act (LABOUR GAZETTE, July, 1933, page 700) was particularly opposed and its repeal urged "at the earliest possible date."

In concentrating on this measure, the memorandum added:—

"We further contend that the legislation is most obnoxious to the large majority of the citizens of the Province, causing unnecessary irritation, and in many instances actual privation, and we still stand by our own convictions as expressed when the legislation was first brought down by your Government that it very properly can be regarded as vicious, inequitable and reactionary.

"No other Government in Canada, and so far as we know, in the world, has undertaken to practise confiscation in this manner, by extracting part of the wages of labour before those who earn it have access to same."

In regard to the provincial income tax Act it was urged that the statutory exemption be extended to all dependent children, irrespective of age.

Unemployment

There were a number of recommendations pertaining to unemployment. While the necessity of direct relief was realized, yet its "demoralizing effect" was "deplored," and the Provincial government in co-operation with the Dominion Government, was urged "to go the limit to provide work at fair rate of wages." Other proposed action included the

enactment of legislation restricting working hours in industries "coming within the scope of the province to not more than forty per week or eight per day; and the reduction of the age limit for old age pensions from 70 to 65 years.

Fair Wage Act

An additional clause to Section 19A of the provincial fair wage Act was submitted as follows: "and may add to the classes of occupation and classes of work described as 'private work' in Section 2, subsection (*ff*) hereof and such additions may be made notwithstanding that the said subsection specifically excludes certain work, and without limiting the intent of this section, may extend the application of the provisions of this Act to apply to all persons, or any class of such persons, employed in any industry, or group of industries, or class of work, when

(1) An agreement governing hours of employment, and, or, rates of pay, has been entered into between the organization of employees, and their employers engaged therein.

(2) It is evident from applications made jointly or separately by both employees and employers that the majority of those engaged in any industry, or group of industries, or class of work, desire that such extension be made in their case providing same shall not be harmful to the general public.

A further proposed provision was that employers within the scope of the Act be required to take out a licence under regulations "specifying under what conditions licences shall be issued."

Other Recommendations

Other recommendations included:

Abolition of all level crossings at earliest possible date.

Abolition of all fees in connection with public, high and vocational schools, and free text books to pupils whose parents are unable to purchase them.

Amending the minimum wage act to establish a male minimum wage of 40 cents (instead of 25 cents) per hour.

HOLIDAYS WITH PAY FOR EMPLOYEES OF THE IMPERIAL OIL COMPANY

A further step in the development of the Imperial Oil Company's policy with regard to its employees was taken recently in a plan, submitted to the Joint Industrial Councils of refineries and marketing divisions, whereby wage earners in the Company's employ will henceforth be entitled to holidays with pay.

The plan (outlined in the *Imperial Oil Review*) has been under consideration for some time and is another recognition of faithful service and of the industry's consciousness of its' responsibility to spread employment. The scheme is described in a letter addressed by G. Harrison Smith, President of Imperial Oil, Limited, to the chairman of the Refinery and Marketing Industrial Councils and Managers of the Marketing Divisions. The letter reads as follows:—

"The Board of Directors have had under consideration for some time the matter of granting vacations, with pay, to wage earners. This is in line with the Company's view that economic progress requires good wages for labour and reasonable leisure to stimulate consumption of the products of industry.

"In recognition of faithful service and in a further endeavour to spread employment and to maintain high standards of physical fitness, and to share with the employees economies which will be effected in operations, the following plan has been developed and is transmitted to the various Joint Industrial Councils. Subject to acceptance by them, it will become effective January 1, 1937:

Eligibility and Length of Vacations.—"All employees who have completed one year's continuous service are eligible for one week's vacation, with full pay in advance, and those who have completed three years' continuous employment are eligible for two weeks' vacation, with full pay in advance.

Time of Vacation.—"So far as possible, the preference of employees will be given consideration but vacations must be taken at such time as is required by the management for the efficient operation of business.

"When a holiday falls on an employee's normal working day during his vacation, in a department which closes down on that holiday, such holiday is not to be counted as part of the vacation. In other words, the vacation shall be lengthened to include another workday in order to complete a full vacation.

Vacation Pay.—"One week's vacation pay shall be calculated by multiplying the established number of hours worked per week by the employee's normal hourly rate. Where the employee normally works on two or more rates of pay, excluding temporary substitutes (because of vacations) or in case of piece workers, the employee's average weekly earnings for the two immediately preceeding weeks shall be used as the basis of vacation remuneration.

General Rulings.—"It is not permissible to postpone vacations from one year to another or to waive vacations and draw double pay, and no party during his vacation shall be allowed to substitute for another employee. Likewise, vacations are not to be granted during a period or part period of regularly scheduled accumulated time off.

"Periods of disability resulting from accident or illness (as determined under the Benefits Plan) shall be considered as part of the continuous employment in determining continuity of employment.

"We shall be pleased to have the Joint Industrial Councils give this matter early consideration and report their decision.

Yours very truly,
G. H. Smith."

This plan augments the Imperial Oil Company's industrial relations policy already in effect, which includes pensions, sickness benefits, and death benefits. From time to time, as these plans have been introduced they have been reviewed in the LABOUR GAZETTE.

MINIMUM WAGES IN NOVA SCOTIA AND SASKATCHEWAN

Orders Issued by Provincial Minimum Wage Boards Governing Hotels, Restaurants, Etc.

The Nova Scotia Minimum Wage Board recently revised Order Number 3 which was issued on November 19, 1930, and was printed in the LABOUR GAZETTE for January, 1931, at page 35. The new Regulations, which became effective on December 10, 1936, cover hotels, restaurants and refreshment rooms in cities and incorporated towns, as did the former Order, and also boarding houses, tea-rooms, ice-cream parlours and light lunch stands. The period during which a worker is classed as inexperienced is reduced from twelve months to three months. Provisions fixing hours for which the minimum wage is payable are unchanged at 44-50 hours per week.

A new section forbids any reduction in the minimum wage for the use, purchase or laundering of uniforms, caps or similar articles of apparel. The provisions of the Act forbidding employers to discharge, threaten to discharge or otherwise discriminate against employees lodging complaints with the Board or testifying in proceedings under the Act are reproduced in the Order together with a statement that complaints are treated as strictly confidential.

The minimum wage rates are as follows:—

Population Group	Experienced Workers	Inexperienced Workers
Cities and Towns of 17,000 population and over	$11 00	1st Month, $ 9 00 2nd Month, 9 50 3rd Month, 10 00
All Towns under 17,000 population	$10 00	1st Month, $ 8 00 2nd Month, 8 50 3rd Month, 9 00

After working three months an employee becomes an experienced worker.

Saskatchewan

The Minimum Wage Board of Saskatchewan has revised Order No. 4 applying to hotels, restaurants and refreshment rooms in cities of the Province and within a radius of five miles thereof. Orders 1, 2, 3, and 5 were revised in October last, following the passing of an Order in Council extending the provisions of the Act to include male employees in cities, the latter Orders were printed in The LABOUR GAZETTE for November, 1936, at p. 999.

In common with the Orders revised in October, the new Order provides that persons may be employed as inexperienced minors up to the age of 21 years, instead of 18 years as formerly, and fixes a forty-eight-hour week as the period for which the minimum wage shall be payable instead of establishing maximum hours of labour. The former Order No. 4 forbade the employment of any female worker for more than 49 hours per week, except by special permit from the Board.

The revised Order reduces the amount which may be deducted from wages in payment of board and lodging, the former Order having allowed deductions of $5, $4, and $3 per week from the wages of experienced workers, inexperienced workers and kitchen employees respectively. Deductions for a full week's meals were $7, $6, and $5 for the same respective classes of employees and for a week's lodging $9, $8, and $7. Wages must be paid at least every two weeks instead of every month as under the old Order. Two new provisions fix the minimum period of employment for which minimum hourly rates are payable at two consecutive hours, and require uniforms, caps, etc., to be furnished by the employer.

The provisions of the new Order are as follow:—

ORDER No. 4.—*Governing employment of persons in hotels, restaurants and refreshment rooms in the cities of the Province, and within a radius of five miles thereof.*

1. INTERPRETATION:

(*a*) Hotel includes a boarding house or rooming house in which there are more than five beds set apart for the use of boarders

or lodgers, and also includes premises in respect of which a licence has been issued under part IX of the Liquor Act.

(*b*) Wages: Wage or wages means any compensation for labour or services paid to or retained by, or partly paid to and partly retained by a worker in a hotel, restaurant or refreshment room to which this order applies, whether measured by time, piece, commission or by any other method whatsoever.

(*c*) Application of Order: This order applies to every person employed in or about a hotel, restaurant or refreshment room, excepting bell boys, elevator operators and porters.

2. WAGES:

(*a*) Experienced Workers: No employer shall employ an experienced worker or suffer or permit an experienced worker to be employed in a hotel, restaurant or refreshment room at a rate of wages less than $12 per week of 48 hours, or 25 cents per hour, except as a kitchen help, in which case the rate of wages shall not be less than $10 per week of 48 hours, or 21 cents per hour.

(*b*) Inexperienced Adult Workers: Inexperienced adult workers shall be paid not less than $9 per week of 48 hours, or 20 cents per hour, for the first six months, and thereafter shall be considered experienced workers and shall be paid not less than the minimum rate above prescribed for experienced workers.

(*c*) Inexperienced Minor Workers: Persons under twenty-one (21) years of age may be employed as inexperienced minor workers and shall be paid not less than $6 per week of 48 hours for the first four months, or 12½ cents per hour; not less than $7 per week of 48 hours for the second four months, or 15 cents per hour, and shall then be considered inexperienced adult workers, irrespective of age, and shall be paid the minimum rate above prescribed for inexperienced adult workers.

Minors shall be considered inexperienced adult workers upon reaching the age of 21 years, irrespective of length of experience.

(*d*) Minors: No person under the age of sixteen (16) years of age shall be employed.

(*e*) Overtime: Wages at not less than the minimum hourly rate applicable shall be paid to employees, whether experienced or inexperienced, for all time worked in excess of forty-eight (48) hours in any one week.

(*f*) Part Time: Wages at not less than the following hourly rates applicable shall be paid to all employees working on a part time basis:

(i) Experienced workers not less than 30 cents per hour.

(ii) Inexperienced adult workers not less than 25 cents per hour.

(iii) Inexperienced minor workers not less than 20 cents per hour.

Provided that no period of employment shall be less than two consecutive hours.

(*g*) Board and Room, Uniforms and Laundry: Where meals are actually furnished by the employer, there may be deducted from the wage a charge not greater than at the rate of Four Dollars and Fifty Cents ($4.50) for a full week of twenty-one meals.

If lodging is furnished by the employer a deduction from the wage of not more than Two Dollars ($2) per week for a full week's lodging may be made.

Where less than twenty-one meals or seven days' lodging are furnished in any one week not more than Twenty Cents (20c.) for each meal and Thirty Cents (30c.) for each day's lodging shall be deducted from the wages of the employee.

For inexperienced minor workers, the charge for board and/or lodging in respect of any week shall not exceed a sum equal to the minimum wage payable, less the sum of $2.

If any specified kind of dress, cap, cuffs, apron or uniform are required, they shall be furnished by the employer without cost to the employee.

(*h*) Method of payment: Wages shall be paid promptly at regular intervals, in cash or by cheque, and no earning period shall be longer than two weeks.

3. REGISTER:

Every employer shall keep in each hotel, restaurant and refreshment room a register of the names and addresses, the working hours and the actual earnings of all his employees, working therein, and shall on request permit any member or representative of the Board to inspect and examine same.

4. POSTING OF ORDER:

Every employer of labour in a hotel, restaurant or refreshment room shall keep a copy of this order in such a position that it can easily be read by his employees.

5. PENALTY:

An employer who violates any of the provisions of this order is punishable by fine and in default by imprisonment.

6. COMMENCEMENT OF ORDER:

This order shall come into force on the sixteenth day of December, 1936, and shall supersede all orders of the Board respecting hotels, restaurants and refreshment rooms.

According to an announcement made on December 22, 1936, by the Chairman of the Social Security Board of the United States, 22,129,617 persons had already filed applications under the Social Security Law to ultimately share in the old age benefits provided for under this new enactment. New York State, with 3,433,631 applicants, led all States at the date of announcement. More than half of the applications were filed in the industrial States of New York, Pennsylvania, Illinois, Ohio, California, Massachusetts and Michigan.

It was also announced that the Social Security Board had granted $1,112,818 to five States for public assistance to 88,920 needy aged and blind persons and dependent children.

COLLECTIVE AGREEMENTS IN FRANCE

A recent issue of the quarterly publication of the Ministry of Labour of France contains an article on the operation of the Act concerning collective agreements passed on June 24, 1936. It was stated in a report to the National Economic Council in November, 1934, that collective bargaining had not developed as much in France as in most other countries and the number of agreements was declining. The report of the Ministry of Labour shows that in the three months following the enactment of the new statute the number of collective agreements had increased to approximately 600 and, in addition, the number of provisional agreements had reached 350. The largest number of agreements was in the manufacturing industries of which there were 636. In commerce and banking there were 144, in communication and transportation, 46, personal services, 31, and in extractive industries, 26.

Since 1919, there has been legislation concerning collective agreement in France but the Act of 1936 makes a decided change in the law. Previously, duly constituted associations which had entered into collective agreements were empowered to institute proceedings in their own names or in favour of their members with a view to enforcing the terms of the agreement and agreements between individual employers and groups of workers were also enforceable. But there was no provision in French law for the extension of an agreement so as to bind persons not parties to it. The Act of 1936 made such provision. This statute does not apply, however, to any agreement between a single employer and his employees but applies solely to agreements between organizations of employers and of employees. Only an agreement of this sort may be made a common rule for the industry to which it relates in the district determined by the agreement. The number of applications for the extension of agreements from June 7 to September 7, 1936, was 47, of which 25 related to manufacturing industries.

Every agreement rendered obligatory must contain clauses dealing at least with the following matters: the duration of the agreement, freedom of association and of opinion, the appointment of representatives of the employees in all establishments employing more than 10 persons to act as a committee, with the assistance, if they so desire, of a representative of their trade union to deal with the management in connection with the complaints of the employees, the minimum wages for each class of worker, notices of dismissal, apprenticeship, machinery for the settlement of disputes as to the application of the agreement and procedure for its revision and modification.

The terms of an agreement on these matters may, by an order of the Minister of Labour, be made binding on all employers and employees within the scope of the agreement for the period stated in the agreement. Before such an order is issued, however, the Minister is required to publish in the Official Journal a notice of the proposed extension of an agreement and to invite all interested persons to communicate to him within the period fixed which, it is stipulated, shall not be less than fifteen days, any comments or opinion they wish to express. Moreover, the Minister must obtain the advice of the section or sections of the National Economic Council interested in the matter.

While a collective agreement remains a contract freely made by the parties, the Act is designed to facilitate such agreements. With a view to the conclusion of a collective agreement, the Minister of Labour, on the application of an association of employers or of a trade union, may call a conference of some members of those organizations of employers and workpeople which are most representative of the industry in the district. If the conference does not succeed in arriving at an agreement the Minister, or his representative, after consulting the National Economic Council, is to act as a conciliator and give assistance in solving the difficulty.

Construction Industry in 1935

A preliminary survey of the Construction Industry for 1935, shows a drastic and decided increase in all phases in comparison with 1934. The total value of work performed, as reported to the Dominion Bureau of Statistics by construction and trade contractors (including subcontractors), cities, towns, counties and other municipal governments, harbour commissions provincial and dominion government departments, amounted to $212,908,306, which is an increase of $26,709,416 or approximately 14 per cent over the value reported for 1934.

The increase was general throughout the Dominion. The value of work performed by contractors, builders, etc., showed an increase of $48,148,289, while that performed by cities, towns, municipalities, etc., showed a decrease in 1935 of $21,438,873. Work performed by provincial and dominion government departments in 1935 amounted to almost $44,000,000, which is a decrease, however, of some $10,000,000 from their 1934 figures.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA, 1936

INDUSTRIAL employment in Canada showed further moderate improvement during 1936, a continuation of the favourable trend which, with few interruptions, has been in evidence during the last four years. On the whole, the fluctuations during 1936 were not so pronounced as those in the preceding year, the increase in the number of persons at work being accompanied by an increase in the regularity of their employment. The general improvement during the year just passed as compared with 1935 was rather greater than that in 1935 over 1934. The consolidation of the gains made in the last few years, and their extension to lines which had been slower in responding to the upward movement originating in 1933, resulted in a generally higher level of industrial employment in 1936 than in any other year since 1930. At the 1936 peak at November 1 the index stood at 111·0, which was the maximum in 72 months.

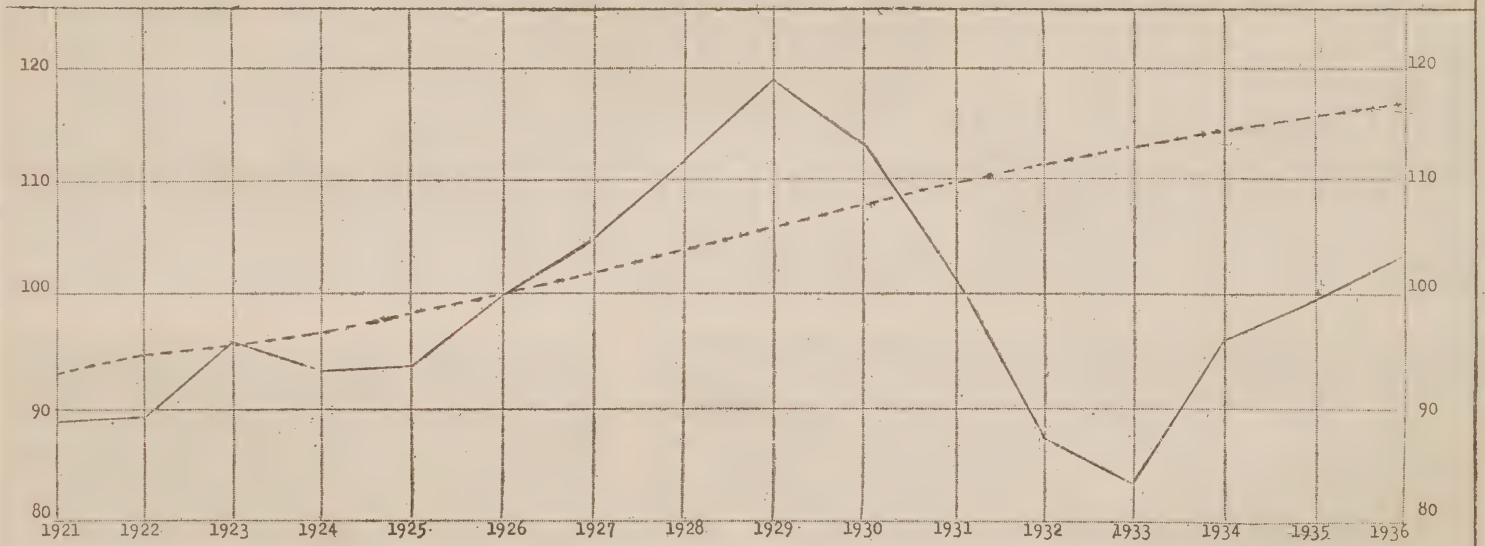
In 1936, as in 1935, public work undertaken primarily for the relief of unemployment was a factor of diminishing importance in the general situation; the number of persons[1] provided with such employment was smaller in the year under review than in 1935, when it in turn had not been so large as in 1934 and 1933. The more favourable situation which existed therefore gave encouraging evidence of a natural revival in business resulting from a greater public demand for commodities and services, rather than from artificially stimulated activity.

The Dominion Bureau of Statistics tabulated an aggregate of 116,606 individual employment reports during 1936, a monthly average of 9,717 returns. The employees of the co-operating firms varied from the minimum of 918,716 at April 1 to the maximum of 1,052,985 at the begining of November, averaging 979,741[2] in the twelve months. The index, based on the 1926 average as 100, rose from 97·4 at the former date to 111·0 at the latter, when it was at its highest point since November of 1930. The unusually small seasonal decline recorded at December 1 reduced the index to 110·1, but the situation was then more favourable than in any month in the preceding five years.

The average change in the index from January 1 to December 1 in the period 1921 to 1935 has been an increase of just over 8 per cent. Between those dates in 1936 the index advanced by rather more than 11 per cent, showing that the upward movement is gaining momentum as it proceeds. The 1936 mean index was 103·7, as compared with 99·4 in the preceding year. This represents a very considerable increase over the low average of 83·4 in 1933, but it is still substantially below the sixteen-year maximum of 119·0 in 1929.

The improvement recorded during 1936 as compared with 1935 extended with few exceptions to the various geographical and industrial units, construction being the great exception among the latter. Manufacturing, logging, mining (particularly of metallic ores), services and trade reported considerable advances. On the whole, activity in the eight cities for which separate tabulations are made showed gains over 1935 that slightly exceeded the general increase in Canada, but it should also be noted that employment in these cities, taken as a unit, continues at a lower level than in the Dominion as a whole. Thus, the average index for the eight cities stood at 97·7 in 1936, while that for Canada was 103·7. This disparity should be considered in any comparison of the employment record and the unemployment relief statistics in which city dwellers figure very largely.

The present Annual Review of Employment contains two new features: (1) a chart showing together the curves of population and of employment as reported by leading employers, and (2) a comparison of the employment index numbers in Canada and the United States. Following these brief discussions is an analysis in some detail of employment conditions in the Dominion during the year just passed.



Population and Employment

The accompanying chart (2) shows the population curve in Canada since 1921, together with the fluctuations in the employment reported by employers in the same period; the 1926 figure is taken as 100 per cent in calculating the indexes on which both curves are plotted. It is interesting to note that the employment curve rose much more rapidly than that of

[1] See footnote on page 58.

[2] The number of wage-earners reported in the Census taken in June, 1931, was 2,570,097, of whom 2,100,139 were at work on the date of the Census. The firms reporting for June 1, 1931, showed an aggregate payroll of 940,875 persons, or 44·8 p.c. of the census total, which included the professional classes (notably teachers and public administration employees), agricultural workers, domestic servants and other important classes of workers not included in the monthly surveys of employment. When the census figures are adjusted, so far as is possible, to include only the classes of workers represented in the monthly employment surveys, the proportion of the latter to the former rises considerably. Since 1931, the number of co-operating firms has grown, with a consequent increase in the proportion of the total working population represented in these statistics. A memorandum comparing the industrial distribution of the workers included in the monthly employment surveys with the industrial distribution of all workers in the Dominion, as ascertained in the 1931 census, has been issued; copies may be obtained on application to the Dominion Bureau of Statistics.

CHART 2.- POPULATION AND EMPLOYMENT IN CANADA.

The broken curve shows the course of population since 1921; the fluctuations in the employment afforded by leading employers are depicted in the unbroken line. In both cases the 1926 figures are used as 100 p.c. in making the index numbers from which the curves are plotted.

the population from 1926 to 1929; during these years there existed a high rate of immigration, while many persons were no doubt absorbed into the industries covered in the employment surveys from others not included, and a considerable number of men and women also transferred themselves from the class of "workers on own account" to wage and salary earners. The content of the population in the boom period was also abnormal, being composed of an unnaturally high proportion of wage-earners as a result of the above mentioned factors: (1) the great influx of immigrants most of whom were of working age, and (2) of the employment of persons not normally wage-earners. Had it been possible to depict the curve of employable population rather than the crude population curve, the difference between it and the curve of employment would have been reduced. Emigration, but more particularly the stoppage of immigration following the boom period culminating in 1929, lowered considerably the employable population, despite the natural increase in the crude population, which, as a result, became more normal both in age distribution and in proportion of wage-earners.

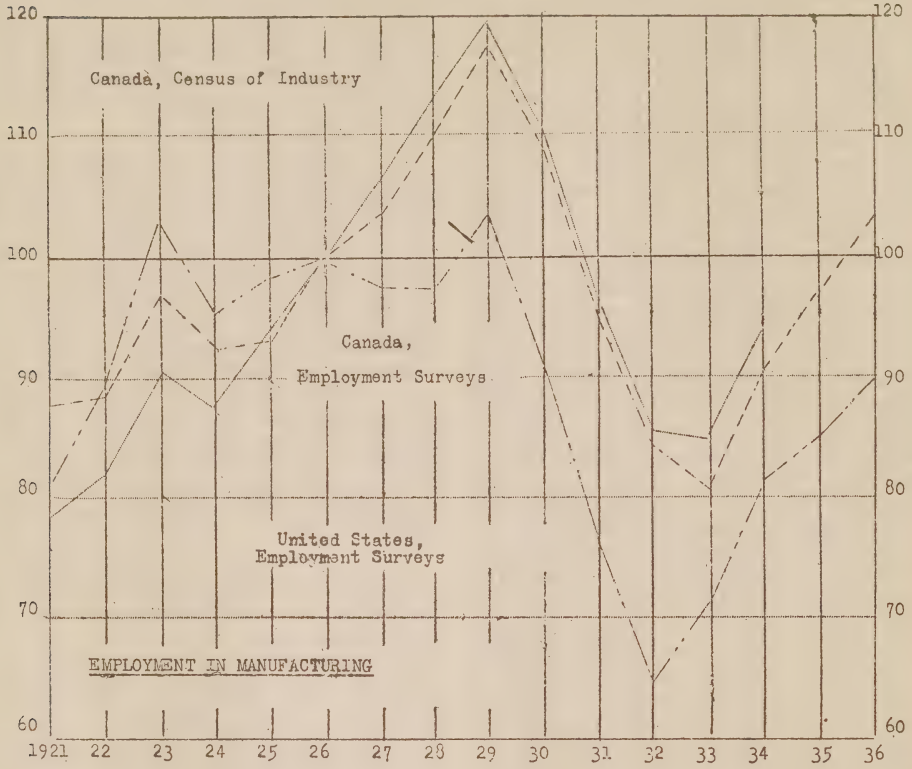
While the crude population curve has therefore continued steadily to gain, the employment curve declined more or less precipitately from 1929 to 1933. The recovery indicated in the years since then, substantial though it has been, has not yet brought the employment curve into line with that of the estimated total population; in part this is due to the changed employable content of the population, mentioned in the preceding paragraph.

Comparison of Employment in Canada and the United States

There has recently been manifested considerable public interest in a comparison of employment in the Dominion and the United States. For the benefit of those who have not access to the available statistics compiled in the latter, the following brief review is presented.

The United States Bureau of Labor Statistics publishes monthly statistics of employment for certain manufacturing and non-manufacturing industries. Differences in the industrial classifications used in the two countries make difficult comparisons for most of the non-manufacturing industries, so that this analysis is confined to two divisions—manufacturing and steam railway transportation. The classification of industries within the former are by no means identical in Canada and the States, but enough similarity exists to afford a good basis of comparison.

1. *Manufacturing.*—Both American and Canadian figures cover a large proportion of the total factory employees. Indexes for the States are calculated on the average for the three years, 1923-1925, as 100 per cent, while the base of the Canadian indexes is 1926; the American figures have been converted on a 1926 base to bring about greater comparability with our own data.



The United States index numbers have recently been revised and adjusted to the Census of Manufactures totals for 1933; this has not altered their trends, but it has raised the previously published monthly figures, thereby diminishing the differences between the American and the Canadian indexes. In the Dominion, the curves of employment plotted from the data collected in the annual Census of Industry and in the monthly surveys of employment have been so similar that revision has not been found necessary, the disparities that exist resulting chiefly from differences in the dates of collection; this factor appears to be important mainly when employment is fluctuating to a greater-than-normal degree.

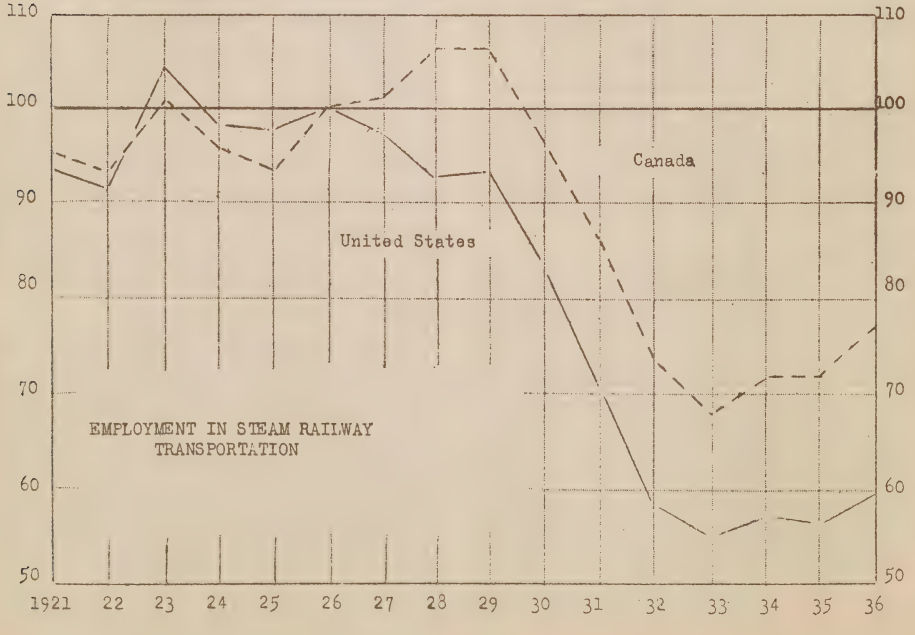


Chart 3 shows the movements of factory employment in Canada and the United States since 1921 in manufacturing and steam railway transportation.

In the years 1921 to 1926, employment in manufactures in Canada was at a lower level than in the United States, but from 1926 the development of industry in the Dominion was rapid and the curve rose to a level much higher than in the States. It is probable that during these years, curtailment of staffs due to technological improvements was a factor of generally greater influence in restricting employment in the United States than in Canada, where the more recent establishment of many industries no doubt provided from the first for the use of labour-saving machinery. Again, the fluctuations in employment resulting from technological changes are to some extent conditioned by the industrial distribution of the workers, and by the scale of operations characteristic of the various industries. These factors differ considerably in the two countries.

Factory employment in both countries was, of course, seriously affected during the depression, and apparently to somewhat the same degree; thus, the falling-off in the index from the peak year to the trough was not quite 39 points in the States and just over 36 points in the Dominion. Indeed, a very interesting feature of the chart since 1927 is the great similarity of the curves, which from 1928 to 1932 were almost parallel.

CHART 3.- EMPLOYMENT IN MANUFACTURING AND IN STEAM RAILWAY TRANSPORTATION IN CANADA AND THE UNITED STATES, 1921-1936.

In 1933, factory employment in the Dominion, on the average, was in smaller volume than in the preceding year, despite the marked improvement recorded from the second quarter; in the United States, however, under the stimulus of the National Industrial Recovery Acts and other factors, employment was brisker than in 1932. From 1933, the curves for the two countries continued in the same general direction, although it appears that, on the whole, the recovery in Canada has been slightly more accelerated than in the States. This is partly a result of the varying degrees to which the different industries have responded to the generally upward movement. From the information available, the recovery in the durable goods industries in the two countries appears to have been fairly similar, the differences lying mainly in the class of non-durable goods. Thus, employment in food, textile, leather, pulp and paper, chemical and some other groups in Canada appears relatively decidedly more active than across the border in the States.

The Bureau of Labour Statistics in the United States does not publish figures corresponding to the industrial "relative weights" shown in our employment surveys, but a comparison of the data of the 1933 Biennial Census of Industries with the industrial distribution of the workers covered in the current statistics, shows considerable differences in the importance of corresponding industries in the two countries judged on an employment basis. In Canada, it happens that some of the industries in which activity is at a higher level than across the border, employ a relatively greater proportion of the total workers than is the case in the States; this, of course, tends to raise the general index.

A comparison of the monthly figures shows that employment in the Dominion fluctuates in accordance with seasonal movement to a much greater extent than in the United States. For this reason, among others, the annual averages have been used in plotting the above curves. Again, the fact that the aggregate on which the index numbers are based are much smaller here than in the States tends to emphasize changes in employment in the Dominion.

2. *Steam Railway Transportation.*— The United States Interstate Commerce Commission tabulates statistics of the employment afforded by Class 1 railroads, while data are also furnished by the railways in Canada. The statistics in the two countries differ in scope, but the figures are sufficiently similar to warrant a comparison of their movements.

The course of employment on steam railways in the two countries is depicted in the accompanying chart; this shows that employment was at a higher level in the States than in Canada from 1922 to 1926. From then until 1928, the upward trend in the latter compared favourably with declining activity across the border. The number of railway employees in both countries diminished uninterruptedly between 1929 and 1933; although employment continued at a higher level in the Dominion than in the States, the curves showed the same general movements, in that, repeating the experience in manufacturing. Since 1934, a measure of recovery has been indicated in each country, although railway employment has not yet shown either in Canada or the States a revival commensurate with the improvement indicated in many other lines of business.

The Situation in the Dominion during 1936

Employment at January 1, 1936, showed the contraction invariably indicated at that date, but the shrinkage was on a scale less than average in the experience of the years since 1921. A further moderate decline, contra-seasonal in character, occurred at the beginning of February, while at March 1 the trend was seasonally upward. Curtailment was again indicated in the succeeding report, but from April 1 the movement was uninterruptedly favourable, the period of expansion extending to November 1. There was a seasonal slowing-up in activity at the beginning of December, but the losses in employment were on a smaller scale than has been customary in the years since 1921, while the general index continued higher than in all but two months of last year, being also higher than at any period of the last five years.

The situation in every month of 1936 was better than in the same period of 1935, although the fluctuations in the two years differed. The trend was upward in nine months of 1935, and in eight months of the year under review, when neither the increases nor the decreases reported on the whole by the co-operating firms were so large as in the former year.

The annual average index numbers of employment in the sixteen years of the record are as follows:—

1921	88·8	1929	119·0
1922	89·0	1930	113·4
1923	95·8	1931	102·5
1924	93·4	1932	87·5
1925	93·6	1933	83·4
1926	99·6*	1934	96·0
1927	104·6	1935	99·4
1928	111·6	1936	103·7

* As the average for the calendar year 1926, including figures up to December 31, 1926, is the base used in computing these indexes, the average for the 12 months, January 1 to December 1, 1926, generally shows a slight variation from 100.

As has been pointed out in previous Annual Reviews of employment, the general index in recent years has been influenced to some extent by public construction works undertaken for the relief of unemployment.[1] This factor, of decreasing importance in both 1935 and 1936, only indirectly affects the situation in many large industries, which reported marked improvement in the year under review—notably manufacturing, logging, mining, trade, etc.

In connection with the statistics of employment herein reviewed, and particularly with those for manufacturing, it may again be mentioned that the tendency during the years of depression has been to retain as many as possible on the staff by reducing the daily or weekly hours worked. Thus, had statistics of the earnings of the persons included in the monthly reports on employment been available, they would in the period of declining industrial activity have shown in many cases a greater shrinkage than the number on the payrolls, while similarly, an improvement in the business outlook is reflected in an extension of the working hours as well as in an increase in the personnel. This situation is illustrated in the recent statistics of earnings in the United States, which are collected from the firms furnishing monthly data on employment. Thus, at November 15, 1936, the preliminary index of employment in manufacturing stood at 96·6 p.c. of the basic average for the three years, 1923-1925, or 7·9 points higher than in November, 1935, while the index of earnings was 90·1, an increase of 14·6 points over the same period in the preceding year.

[1] The number of man-days worked on a wage basis on relief projects as reported to the Dominion Commissioner of Unemployment Relief by the provinces and Dominion Departments for the eleven months January to November, 1936, was 2,768,480. The average number of men afforded employment per month during the period was 17,042. In federally and provincially operated camps where single men were given useful work in return for subsistence and a small cash allowance, 3,706,730 man-days relief was afforded during the first eleven months of 1936. These figures include 2,683,461 man-days relief afforded in camps administered by the Department of National Defence which were in operation from January to June, during which period an average monthly number of 18,103 single men were cared for (after June practically all these men were afforded employment on the railways in connection with the program of maintenance of way and betterment works carried out under arrangements made between the Dominion Government and the Railways). All of the above figures are subject to revision when final reports are received.

During the year 1935 the number of man-days worked on a wage basis was reported as 4,388,225 and the average number of men afforded employment per month was 25,047. The number of man-days relief afforded on a subsistence basis in 1935 was 6,750,621 and the average number of men cared for monthly on this basis was 23,935.

An analysis of the data furnished by employers throughout the Dominion shows that practically all industries except construction shared in the improvement noted during 1936 as compared with 1935, while in most cases the situation was also more satisfactory than in 1934, 1933 and 1932.

Manufacturing, employing rather more than half of the total workers included in these surveys, experienced during 1936 a lengthy period of uninterrupted expansion. Almost all branches of factory employment contributed in greater or less degree to the recovery shown in 1936, when activity was generally greater than in any other year since 1930. At the beginning of December the index stood at 107·0, being then 10·5 p.c. above that at January 1, 1936; this advance exceeded the average increase of between eight and nine per cent in the index from January 1 to December 1 in the years 1921-1935. Mining, particularly of metallic ores, advanced during many months of the year just passed, with the result that employment in the group as a whole was at a higher level than in any other year of the record. Logging showed exceptionally pronounced increases, and in that industry also, activity during 1936 reached its maximum for the period since 1921. The volume of employment afforded in trade was only exceeded by that in 1929, while in services (mainly hotels and restaurants and laundries and dry-cleaning establishments), the index was higher than in any other year since 1931. Improvement in general business conditions in the Dominion, together with an unusually brisk tourist season, resulted in the favourable situation in these industries during 1936. Transportation and communication provided employment for a greater number of persons than in any other year since 1932, but the index numbers in these industries were generally lower than in preceding years since 1921.

The exception to the generally upward movement of 1936 was construction, in which employment, though in greater volume than in 1932 or 1933, was not so active as in most other years of the record. Railway construction provided work for a greater number of workers than in 1935, 1934, 1933 or 1932, partly as a result of the transfer of men from the unemployment relief camps. The building contractors furnishing data reported, on the whole, the same employment as in 1935. Work on the highways, however, was not so active in 1936 as in the preceding year, when a decidedly larger number of persons had had work on the unemployment relief projects of the various governing authorities.[2]

[2] See footnote (1) this page.

Comparison of Employment in 1936 and 1935

The table below summarizes the employment data for 1936, giving the average number of reporting firms and of their employees and the mean index numbers for the twelve months, January 1-December 1, 1936. The changes since 1935 in these three sets of figures are also given, those for the indexes being shown in points as well as in percentages. With some exceptions, the 1936 figures are higher than those for the preceding year, but where the reverse is the case, the decline is indicated by a minus sign. The table calls only for brief explanation since the employment situation in the various localities and industries is discussed in considerable detail in subsequent pages.

According to this table, there was a gain of 5·1 per cent in the number of reporting employers,[1] while that in the reported number of employees was 5·0 per cent and the index increased by 4·3 per cent in 1936 as compared with 1935. Of the last two comparisons, that

AVERAGE NUMBER OF REPORTING FIRMS, OF THEIR EMPLOYEES AND THE AVERAGE INDEXES FOR THE TWELVE MONTHS, JAN. 1-DEC. 1, 1936, TOGETHER WITH THE CHANGES SHOWN IN THESE FIGURES AS COMPARED WITH THOSE OF 1935

[1] See footnote (1) on page 60.

between the index numbers affords the more reliable guide to changes in the employment situation, since allowance is made therein for the inclusion of new enterprises, as well as for the cessation of defunct businesses.

Heightened activity was recorded in all five economic areas in 1936 as compared with the preceding year. In the Maritime Provinces and Quebec the rate of increase was rather greater than in the Dominion as a whole, while in Ontario and British Columbia the improvement was not so marked. Thus, firms in Quebec employed nearly 35 per cent of those added to payrolls, but only 28 per cent of the total numbers employed in the co-operating establishments, and in the Maritimes these proportions were 9·7 per cent and 8·0 per cent respectively. On the other hand, Ontario, with 42·0 per cent of the average employees, and British Columbia with 8·7 per cent, reported only 34·7 per cent and 8·4 per cent, respectively, of the total number re-employed during the year. These discrepancies, of course, result from the different degrees of activity experienced by the industries predominating in the various economic areas.

Although the general recovery in the cities was proportionately rather greater than in the country as a whole, it was not so marked as in the preceding year over 1934. Employing some 42 per cent of the aggregate workers covered in the monthly surveys of employment, the co-operating firms in the eight industrial centres for which separate tabulations are made, reported nearly 48 per cent of the total number added to the payrolls, while in 1935 some 60 per cent of the net increase had been reported by firms operating in these cities.

The gains were, of course, not uniformly distributed among the various cities: Quebec showed a slight decline in activity, while in the remaining cities, the increases over 1935 ranged from four per cent in Ottawa to 7·3 per cent in Vancouver. Montreal recorded the largest gain in actual numbers involved, amounting to over 34 per cent of the general increase in these municipalities, a quota that very slightly exceeded the proportion of workers in Montreal to the number employed in the eight cities, viz., 33·7 per cent. Toronto firms reported 28·4 per cent of the total increase, but 30·4 per cent of all the employees reported in the centres for which data are tabulated. Vancouver, with 8·1 per cent of the aggregate staff, contributed 11·9 per cent of the increase.

In 1936, as in the preceding year, the expansion in manufacturing was especially pronounced, there being an increase of 6·5 per cent in the average index, as compared with that of 4·3 per cent in all industries. Mining as a whole, logging and services also showed disproportionately large advances in 1936 as compared with 1935, while in trade the gain approximated the average for all industries. On the other hand, in communications and transportation, the rate of improvement was lower than in the above named industrial divisions, although the percentage gains were higher than those recorded in 1935 over 1934. Railway construction reported decidedly greater activity than in the preceding year, while employment as reported by building contractors remained at the same level. Highway construction and maintenance, however, showed curtailment, so that employment in the construction group as a whole declined by 9·8 per cent, as compared with 1935. This was partly due to the reabsorption of many former highway workers into other industries as the general situation improved, changes in the unemployment relief policies of the various governments also influencing considerably the situation[2] in this line of work.

Employment by Economic Areas

The improvement in industrial activity during 1936 extended in greater or lesser degree to all five economic areas. The situation at the end of 1936 was better in each of these districts than it had been at the opening of the year, and except in the Prairies, was also more favourable than at the end of any of the preceding four years. In Manitoba, Saskatchewan and Alberta taken as a unit, the index was slightly lower than at the close of 1935, but was higher than towards the end of 1934, 1933 and 1932. The greatest proportional gain between the 1936 low and high points occurred in Quebec, where the maximum

[1] A continued growth in the number of firms co-operating with the Dominion Bureau of Statistics must be noted in connection with the increases in the workers represented in the monthly surveys of employment. The gain in the former, however, does not wholly result from the establishment of new industries, nor from more regular co-operation on the part of those previously on the mailing list, but is also due to the fact that a steadily increasing number of firms are furnishing statistics in detail for locality and industry. Thus, the different branches of a business organization in various centres appear in the tabulation as separate firms in the centres where establishments are maintained. Similarly, employers appear under each of the industries for which separate reports are furnished. The number of firms as used here might more precisely be described as the number of reports tabulated, but the former expression is generally adhered to in accordance with statistical usage in other series and other countries, and also as presenting a better visualization of the nature of the enquiries. On the whole, the establishments now being added to the mailing list have payrolls that are smaller than the average, being in many cases the less well-known businesses.

[2] See footnote on page 58.

of activity was at December 1, the index then stood at 112·6, being 21·2 points higher than the minimum of 91·4 recorded at April 1. Employment in all five economic areas was greater, on the average, than in the twelve months of 1935, being also at a more satisfactory level than in 1934, 1933 or 1932. In the Maritime Provinces, there was a gain of 5·5 per cent in the 1936 mean over that for 1935, in Quebec of 5·6 per cent, in Ontario, of 3·3 per cent, in the Prairies, of 4·3 per cent and in British Columbia, of 3·5 per cent.

Maritime Provinces.—Employment in the Maritime Provinces fluctuated rather less in 1936 than had been the case in 1935; moderate improvement at the first of the year was followed by declines in the next two months. The trend then became favourable, continuing so from April 1 until November 1, when the index, at 119·4, was higher than in any other month since September 1, 1930. Seasonal curtailment on a greater than average scale took place at the beginning of December, 1936, approximately 3,000 persons being released from the payrolls of the co-operating firms. In spite of this pronounced decline, employment continued at a relatively high level, the index being higher than at December 1 in any previous year of the record, including December 1, 1929, when the falling-off had been outstandingly large resulting in the dismissal of nearly 7,600 workers by the co-operating firms. The index at 115·3 at December 1, 1936, was 7·2 points higher than at the opening of the year, being also 7·8 points above the December 1, 1935, level. The aggregate payrolls of the 679 reporting employers in the Maritime Provinces averaged 78,446 persons in 1936; in the year before, 649 firms had employed a mean of 73,912 men and women. The 1936 average index, at 109·4, was higher than in any of the last five years.

The index in manufacturing as a whole was consistently higher throughout the year than in 1935, the mean being 102·0, as compared with 95·9 in 1935 and 91·8 in 1934. The December 1, 1936, index, at 107·4, was 13·1 per cent higher than at the opening of the year, and eight per cent higher than in the same month in the preceding year. The greatest improvement was in the pulp and paper, lumber, and iron and steel industries, while the index in textiles was also rather higher, on the average, than in 1935.

Unsatisfactory export conditions continued to affect transportation, as in the last few years, although this industry afforded, on the whole, a slightly greater volume of employment in 1936 than in 1935. Communications generally showed moderate improvement over 1935. Construction on the whole was somewhat more active, being brisker in most months of last year than in the same period of 1935. Services and trade also registered a generally higher level of activity. Mining, except at May 1 and June 1, showed some improvement, the index averaging 106·7, compared with 104·2 in the preceding year. Logging was rather brisker than in 1935, but was not so active as in 1934, the index of employment averaging 162·5, as compared with 160·0 in 1935, and with 203·0 in 1934.

Quebec.—With only one exception, the general trend of employment from May 1 to December 1 was favourable in Quebec, the gains on the whole being on a larger scale than those noted in the preceding year. The index rose from its 1936 low of 91·4 at April 1 to its maximum of 112·6 at November 1, or by over 23 per cent. Employment in the year just closed fluctuated between rather wider limits than in 1935, the index advancing by over 21 points between the trough and the peak, as compared with a variation of some 19 points in the preceding year. Activity in each month of 1936 was greater than in the corresponding month of 1935.

The labour forces of the 2,297 co-operating employers varied between 252,688 and 312,279 workers at the dates of minimum and maximum activity, respectively, averaging 278,569 for the twelve months, while the mean index was 100·7; the 1935 average of the 2,202 reporting firms was 262,271, and the index averaged 95·4, while in the preceding year it was 91·7.

Employment in manufacturing as a whole was brisker during the entire year than in 1935, improvement in this comparison being indicated each month, while the 1936 index averaged 103·3, or 6·2 per cent higher than in the preceding year. Practically all classes of manufacturing recorded a larger volume of employment; the improvement in the major groups—lumber, pulp and paper, textiles and iron and steel—was especially important, in view of the large number of workers engaged in such industries.

The index of employment in communications remained unchanged in 1936. There was a small advance, on the whole, in transportation. In the logging group, activity was substantially greater in eight of the twelve months; the index averaged 219·8, as against 192·2 in 1935. Mining was decidedly more active in 1936 than for several years past, largely due to gains in the metallic ore branch; the mining index averaged 184·4 as against 144·5 in the year before. Services and trade also showed greater activity during the year under review.

Ontario.—An average staff of 411,397 employees was registered by the 4,301 firms furnishing data in Ontario; the mean index was

106·7 in 1936, or 3·4 points higher than in the preceding year, when the pay-rolls of the 4,080 co-operating establishments had averaged 395,213. Employment, on the whole, showed slightly less fluctuation during 1936 than in preceding years, there being a range of only 10½ points between the maximum and minimum indexes, as compared with that of 12 points in 1935, and of nearly 19 points in 1934. The situation each month was better than in the corresponding period of 1935, the December 1 index, at 112·9 being 5·5 per cent higher than at the same date of the preceding year.

Manufacturers, on the whole, reported decidedly greater activity throughout 1936, employment generally being in larger volume than in any other year since 1930. As in 1935, the index in 1936 was slightly higher than that of factory employment in the second great manufacturing province—Quebec—while in 1934 and 1933 the opposite had been the case. This was mainly due to a revival of activity in the iron and steel industries, which are especially important in the industrial composition of Ontario; a comparison of the data shows that the heavy industries in this province have experienced a relatively greater measure of recovery than has been the case in Quebec. On the other hand, the indexes in lumber and textiles continued substantially higher in the latter than in Ontario.

Employment in pulp and paper, lumber, textile, metal, food and other factories was brisker throughout the year than in 1935, in each case also showing decided improvement between the opening and the close of the year under review. Iron and steel advanced steadily from January 1 to May 1, 1936, succeeded by contractions in the next four months; the trend was again distinctly upward in the last quarter of the year. The contra-seasonal gains at December 1 brought the index to 100·5, being then 11·7 per cent higher than at the opening of the year. The index averaged 94·7, as compared with 88·1 in 1935, 72·1 in 1934, 58·3 in 1933, and 64·3 in 1932. In the textile group, activity gained month by month from January 1 until April 1, and expansion was also indicated in August, September and October; at the October 1 maximum, the index was 6·7 per cent higher than at January 1, and in spite of the seasonal curtailment indicated at the beginning of December, it was then still 6·5 points above the January 1 index. The 1936 mean of 112·3 was over four points above that of the previous year.

Operations in logging camps throughout 1936 were at a relatively high level in comparison with the last few years, the index averaging 116·6, as compared with 107·4 in 1935, 95·9 in 1934 and 47·9 in 1933. Mining was particularly active, employment in the autumn and early winter reaching the highest level in the record; at December 1 the index was 239·0, while in the twelve months it averaged 217·6, as compared with 185·8 in 1935, 154·5 in 1934 and 127·2 in 1933. The extraction of metallic ores, which accounts for most of the persons engaged in mining in Ontario, continued at an unusually high level during the year just passed, international monetary conditions again providing an important stimulus to production. The number employed in communications was very slightly greater than in 1935. Transportation, in each month of 1936, was brisker than in the corresponding month of the preceding year, and the mean index was 80·0, or several points higher than that of 75·9 in 1935, being also higher than in any other year since 1932. Construction generally afforded less employment, partly a result of the changes in the unemployment relief policies; private and commercial building, however, was in rather greater volume than in the preceding year. The index for construction as a whole averaged 91·3 in the twelve months of 1936, compared with 118·9 in 1935, 158·8 in 1934, 86·2 in 1933 and 101·1 in 1932. Services also reported greater activity than in the year before, to some extent reflecting improvement in the tourist trade. The volume of employment in trade was also greater throughout 1936 than in the preceding year, the index averaging 134·3, or 3·6 points higher than in 1935.

Prairie Provinces. — Employment in the Prairie Provinces showed rather less variation than in the preceding year, the index ranging from 90·5 at April 1 to 108·6 at the beginning of October, as compared with a spread of some 21 points between the 1935 high and low. The general situation at the beginning of most months was better than at the same date of the year before, but in the last two months the index numbers were lower; however, that for October 1 was the highest since November 1, 1931. The average for the twelve months under review was 99·3, or 4·1 points more than in the preceding year. The 1,417 employers furnishing data in Manitoba, Saskatchewan and Alberta had an average staff of 125,810 persons during the year, while in 1935 the 1,349 co-operating firms reported an average payroll of 120,089 workers.

As has been pointed out in previous annual reviews of employment the population of the Prairies depends to such an extent upon agriculture that much distress results from any dislocation of the world wheat market and from unsatisfactory crop conditions, such as the 1936 drought. This latter is reflected in the lowered employment indexes shown towards the close of last year. Nevertheless, activity in manufacturing, mining, transporta-

tion and communications, construction and maintenance, services and trade in the Prairie Provinces was generally greater during 1936 than in the preceding year. Within the manufacturing group there were advances in the textile, pulp and paper, lumber, iron and steel and some other industries. Logging was quieter in most months of the year, the index averaging 63·2, compared with 100·8 in 1935.

British Columbia.—The 1,023 firms reporting in British Columbia employed an average working force of 85,519 employees, while in the preceding year a mean of 81,600 was reported by 969 employers; the 1936 index averaged 101·1, as compared with 97·7 in 1935. In these years it was higher than in 1934, 1933, 1932 or 1931.

All groups of manufacturing indicated heightened activity during the year under review. The lumber, pulp and paper, textile, iron and steel and other factories reported a decidedly better situation at the end of 1936 than at the beginning, while the indexes also averaged higher than in the preceding year. Logging showed improvement, although employment in this and other branches of the lumber industries continued to suffer from the decline in world demand, the indexes still being at a low level in comparison with most years of the record. Mining, transportation, communications, services and trade were brisker practically throughout 1936, the mean index in each of these being higher than in 1935, when they were, in turn, higher than in 1934 and 1933. On the other hand, construction was not so active in the year under review as it had been in 1935.

Employment by Cities

Improvement in industrial employment was reported in seven of the eight centres for which statistics are segregated, viz., Montreal, Toronto, Ottawa, Hamilton, Windsor, Winnipeg and Vancouver, while in Quebec City there was a slight recession. The gains were relatively greater during 1936 in Hamilton and Vancouver than in the other cities. As in 1935, the recovery in these cities which during 1933 and 1934 had been generally at a slower rate than in the Dominion as a whole was in 1936 slightly more pronounced. Their index numbers showed an average advance of 4·9 per cent, as compared with the general increase of 4·3 per cent in the Dominion. The continued improvement in manufacturing and trade in recent months largely accounts for this situation.

The reports show that employment was again maintained at a generally higher level in Ottawa and Windsor than in the other centres above-named, while as in 1935 the lowest indexes were indicated in Montreal and Winnipeg.

Montreal.—The staffs of the 1,328 Montreal firms making returns averaged 138,313 persons, while the mean index, at 92·1, was 5·5 per cent higher than that for the preceding year. The fluctuations in employment in 1936 were different from those of 1935; however, gains were made in eight months, and these provided work for a rather larger number of persons than had been added to the reported staffs in the preceding year. The index rose from 86·4 at January 1, 1936, to 98·3 at the beginning of December, when activity was at its highest since the early autumn of 1931. Manufacturing generally was more active in every month of the year under review; the index averaged 95·8, as compared with 89·8 in 1935. The vegetable food group showed a higher level during eleven months of last year than in the same months of the year preceding, the average index being higher. The printing, publishing and paper goods, textile, iron and steel and other divisions reported substantial improvement on the whole as compared with 1935. The communications index was fractionally lower. Transportation was quieter in most months, the index averaging 90·5 per cent of the 1926 average, as compared with 92·1 in 1935. Construction firms reported slightly larger payrolls during the greater part of 1936, their employment average during the year being rather better; towards the close of 1936, public works were undertaken for the relief of unemployment which greatly improved the situation. In trade the index throughout the year under review was higher than in 1935; the annual average was several points higher, at 127·9.

Quebec City.—The 1936 variation between the minimum and the maximum of employment in Quebec amounted to little more than six points in the index, a range much less than that of nearly fourteen points in 1935, when the average index, at 96·9, was slightly above that of 95·2 in the year under review. The staffs of the 170 employers furnishing data averaged 12,661, as compared with the mean of 12,719 reported by 165 firms in 1935. Activity in manufacturing generally was at a slightly higher level, the mean index standing at 97·5, as against 95·6 in the preceding year. Leather plants, on the whole, were rather busier than in 1935, and other branches of manufacturing also showed a betterment. Employment in transportation and construction, on the whole, was quieter.

Toronto.—Employment improved moderately during eight months of 1935; at the close of the year the index was five points higher than at the beginning, while the annual mean of 101·5 compared favourably with that of 97·5 for 1935. The employees of the 1,460 firms co-operating during the year under review averaged 124,893, while in the year before the mean payroll of the 1,372 reporting employers was 118,543. The manufacturing industries showed a better situation each month of 1936 than in 1935, and the average index of 99·2 was nearly five points higher. Within this group, vegetable food, iron and steel, textile, printing and publishing and other manufacturing industries reported greater employment in the twelve months under review. The gains in iron and steel works were most marked; nevertheless, activity in this division continues relatively dull, the index averaging only 82·2 per cent of the 1926 average as 100.

Transportation during 1936 showed steady improvement over the preceding year, the index averaging 93·4 as compared with 89·4 in 1935. Communications again afforded slightly less employment; there was also a moderate falling off in construction, in which the mean index was only 58·6. Trading establishments, on the other hand, showed heightened activity; the index averaged 126·9 in 1936, as compared with 123·7 in the preceding year.

Ottawa.—There were advances in Ottawa during six months of last year, as compared with eight monthly increases in 1935. However, the number of persons added to the payrolls of the co-operating employers was greater in 1936, when the index averaged 106·3, compared with 102·2 in the preceding year. Manufacturing reported a rather larger volume of employment; lumber and other plants showed greater activity, but pulp and paper mills reported no general change. Construction was slacker, while trade was more active than in 1935. An average payroll of 13,905 workers was employed by the 186 firms whose data were received, as compared with the 1935 average of 13,145 reported by 172 employers.

Hamilton.—Employment in Hamilton in 1936 did not increase to so great an extent as in 1935, but the mean index for the year under review, at 98·3, was higher than that of 92·6 in the preceding year. The 281 co-operating firms reported an average working force of 31,578 persons; in 1935, 270 establishments had 29,630 workers on the average. Manufacturing showed gains in many months, being generally more active than in 1935. Iron and steel, electrical appliances, textiles and other groups of factory employment, on the whole, reported improvement over 1935. As in most of the cities for which data are tabulated, construction in Hamilton was at a low level, the index averaging 49·4, compared with 53·4 in the preceding year. On the other hand, trade afforded greater employment in 1936.

Windsor.—The index number of employment in Windsor averaged 121·3 and the recorded payrolls of the 172 co-operating firms averaged 16,495 workers in 1936, compared with the mean index of 115·0 and 15,568 employees in 165 establishments reported during the preceding year; in 1929, when employment was at its maximum for this record, the average index was 153·2. Manufacturing showed general improvement, as compared with 1935, the index averaging 129·9, or 6·2 points higher than in 1935. Heightened activity on the whole, was indicated in automobile and other factories. Employment in construction continued in very small volume, the index at 32·2, being only fractionally higher than in the preceding year. Owing to the employment policy followed by some firms in Windsor, it frequently happens that activity at the date of these enquiries is at a lower level than on many other days in the month; the practice of reducing working hours rather than personnel is also an especially important factor in the situation in that centre.

Winnipeg.—Conditions in this city continued to improve moderately, but employment was still dull, the index being lower than in any other leading city, except Montreal. Owing to the geographical position, Winnipeg has been particularly affected by the agricultural situation, as well as by other unsatisfactory factors of more general application. Improvement was noted in only five months, the difference between the low and the high index of employment being eight points. The mean index for the year was 92·3, compared with 87·8 in 1935. The manufacturing division as a whole was brisker in every month of the year under review than in 1935; considerable improvement occurred in iron and steel, food, textile and other factories. Transportation, construction and trade generally reported a larger volume of employment. An average staff of 39,595 was employed by the 473 firms whose data were received during the twelve months under review, compared with 37,529 reported by 448 establishments in 1935.

Vancouver.—During 1935, employment in Vancouver had advanced during six months; the 1936 period of expansion extended over seven months, while the index averaged 103·7, or 7·1 points more than in the preceding year. The December 1 index, at 106·0, compared favourably with that of 97·2 recorded at January 1; in 1935, however, there had been

a gain of 11·6 points between January 1 and December 1. Data were furnished by 429 employers with an average payroll of 33,295 workers in 1936, while in 1935 the means were 405 establishments and 30,630 employees. The unemployment existing in Vancouver, as in other industrial centres, is doubtless greater than would be indicated by these surveys of employment, owing to the unemployed transients who gravitate there, although they may never have appeared on any of the payrolls reported by Vancouver establishments. The situation in that city is aggravated by the milder winters enjoyed as compared with other parts of Canada.

Manufacturing showed improvement over 1935 during most months of 1936, when the index averaged 105·6, or 10·1 points higher than in the year before. In most months, the lumber trade showed heightened activity, and other manufactures were also generally brisker. The indexes for communications, transportation, services and trade in each case averaged higher than in 1935; there was a slight advance in construction, but the index continued low, averaging only 59·9 during the twelve months.

Employment by Manufacturing

Employment in manufacturing generally increased month by month from January 1 to October 1, some 62,800 men and women being added to the staffs of the co-operating establishments during this period. In 1935 there had been advances from the first of the year to November 1, or during ten months, while no previous year has shown more than nine consecutive monthly advances. Seasonal losses on a scale less than average in the experience of the years, 1921-1935, were noted at November 1 and December 1, 1936; the result was that the index at the latter, after adjustment for seasonal influences, stood at 108·1, a level higher than in any other month since midsummer of 1930.

The crude index at the end of the year, at 107·0, was 10·5 per cent higher than at January 1, 1936, this increase over the twelve months exceeding the average advance indicated between January 1 and December 1 in the period 1921-1935. Employment in each month of 1936 was in greater volume than at the same date in the preceding year, while the unadjusted index at the 1936 maximum of 109·0 at October 1 was higher than in any other month since August 1, 1930.

Statistics were received during 1936 from some 5,710 manufacturers employing, on the average, 522,756 operatives, as compared with the average of 487,664 reported by the 5,480 establishments making returns in 1935. The index averaged 103·4 per cent of the 1926 payrolls of the co-operating firms, as compared with a mean of 97·1 in the preceding year, 90·2 in 1934, 80·9 in 1933, 84·4 in 1932, 95·3 in 1931, 109·0 in 1930, and 117·1 in 1929.

Index numbers are prepared for 45 different divisions and sub-divisions of factory employment; in 41 of these, employment on the whole was in greater volume than in 1935; in two it was unchanged, while in the remaining two it was not so brisk.

The most pronounced gains during 1936 occurred in the iron and steel and other metal, textile, lumber, vegetable food, chemical and clay, glass and stone divisions. The mean index in iron and steel advanced from 82·7 in 1935, to 89·2 in the year under review, or by 7·9 per cent; this gain is of particular importance as indicative of a continued upward movement in the production of capital goods, the recovery from the low point of the depression having originated in the production of goods for immediate consumption.

The highest level of employment, relatively to the 1926 basic average, was maintained in the edible animal, leather, vegetable food, textile (notably silk, woollen and knitting mills), tobacco and beverage, chemical, electric light and power, electrical apparatus, rolling mill, automobile, heating appliances, non-ferrous metal, non-metallic mineral and miscellaneous manufactures. On the other hand, the indexes in fur, lumber, musical instrument, rubber, cotton, clay, glass and stone and iron and steel works, as a whole, were lower than the average for all manufacturing industries.

Logging

Employment in logging during 1935 had reached a volume never exceeded in this record; during 1936, activity generally continued at a high level, and the annual index showed a further increase, standing at 138·7, as compared with 126·9 in 1935, and with 125·8 in 1929, the previous maximum. Improvement over 1935 was indicated in all but the Prairie Provinces, that in Quebec being especially marked. The working force of the 321 logging firms supplying information during 1936 averaged 39,234. The reported payrolls varied between 25,033 at May 1 and 75,664 at the first of December. In 1935, the number employed by the 301 employees co-operating was 35,427. Previous issues have mentioned that the difficulties of collecting data covering bush operations are constantly increased by the growing practice on the part of the larger operators, of letting contracts for their wood requirements to small contractors and to settlers on the northern frontiers of settlement.

29936—5½

From many of such contractors, it is impossible to obtain data, at any rate in time for inclusion in the monthly surveys of employment.

Mining

There were gains in mining during seven months of 1935, while the trend was upward in only six months of last year when employment was, however, maintained at a consistently higher level, being, on the average, also in greater volume than in any other year on record. The index at 150·3 at December 1, 1936, was 15·7 per cent higher than at the opening of the year, and was also 14·6 per cent higher than at December 1, 1935. The mean index for 1936 was 136·5, compared with 123·3 in the preceding year.

Coal-mining.—Employment was in slightly greater volume, on the whole, the index averaging 89·8, compared with 88·4 in 1935. The labour force of the 102 co-operating operators averaged 24,300 workers in 1936, as against a mean of 23,915 men employed in 101 mines in the preceding year.

Metallic Ores.—Employment in the extraction of metallic ores was generally much brisker than in 1935, or any other year for which statistics are available; the mean index, at 256·0, was over 17 per cent above the average of the preceding year. The index varied from 226·6 at January 1 to 286·7 at November 1, showing uninterrupted improvement during these months. The staffs of the 189 reporting firms averaged 30,991 during the year under review, compared with 26,064 in 157 mines during 1935. World monetary conditions continued to exercise a decidedly stimulating effect on activity in the metallic ore division.

Non-metallic minerals (other than coal) again showed considerably increased employment, the situation in each month of 1936 being better than in the same period of the preceding year. The index averaged 110·1, as compared with 94·8 in 1935. An average payroll of 7,547 persons was employed during 1936 by the 81 co-operating firms, while those reporting in the preceding year had a mean of 6,471. Quarries and other divisions coming under this heading recorded heightened activity.

Transportation

The fluctuations in employment during the year under review differed from those of 1935, there being increases in seven months, during which the numbers added to staffs were larger than in the preceding year. The employment index for 1936 averaged 84·1, as compared with 81·2 in 1935. The 436 transportation companies whose returns were tabulated employed, on the average, 100,801 workers, as compared with the mean of 96,047 reported by the 402 employers co-operating in the preceding year.

Steam Railway Division.—In the steam railway division, the index averaged 74·7, as compared with 72·1 in 1935. An average working force of 59,414 employees was recorded in steam railway operations, compared with 57,321 in the year before. It is probable that the working hours of many railroad employees, which had been reduced in the last few years, have also been lengthened as a result of the general improvement in business.

Street Railways, Etc.—Street railways and cartage and storage companies, to the number of 226 with a mean of 26,224 workers, reported a slightly better level of employment, the index averaging 117·1, or over four points higher than in the preceding year. Activity in shipping and stevedoring was also rather greater than in 1935; the mean index was 84·5, while the reported staffs averaged 15,163, varying between 11,424 persons at January 1, and 17,298 at the beginning of July. In the year before, the mean index was 82·3.

Communications

The communications division reported a very slightly greater volume of employment than in the preceding year, the index averaging 81·0, compared with 79·8 in 1935. Telegraphs and telephones both showed moderate improvement. The personnel of the companies furnishing data averaged 21,456 employees, of whom approximately 77 per cent were engaged on telephones. In the preceding year, the average was 21,099, some 77 per cent of whom were also engaged in telephonic communications, while in 1933 this proportion had been 80 per cent.

Construction and Maintenance

Employment in construction showed general advances in six months of 1936, during which period approximately 48,500 workers were taken on by the co-operating contractors; in the preceding year, increases were recorded in eight months, and the number of persons then added to the payrolls was about 55,300. In 1936, the persons engaged on unemployment relief projects[1] were not so numerous as in 1935, when they in turn were in smaller number than in 1934 and 1933. There were ad-

[1] See footnote on page 58.

vances last year in railway construction, to which many workers were transferred from the unemployment relief camps; however, these gains were not sufficiently large to counteract the declines recorded in work on roads, while building contractors showed no general change from the preceding year. Employment in construction as a whole was therefore in smaller volume than in 1935 and most other years of the record. This was the only main industrial group showing reduced activity from 1935. The forces of the 1,082 co-operating employers aggregated 103,796 in the year being reviewed, varying from 84,265 at April 1, to 128,463 at the beginning of September.

Building construction gained in only five months in 1936, as compared with eight monthly increases in 1935. However, the mean index in the year under review, (55·4 per cent of the 1926 average), was the same as in the preceding year, but was very much lower than in years of normal building activity. The average number of persons employed by the 699 reporting contractors was 22,499. In 1935, 669 contractors had reported an average of 22,400 employees. As already stated in connection with logging, there is an increasing tendency for the larger contractors to sublet their contracts, by trades, to sub-contractors, who usually employ a comparatively small number of workers. When they have fewer than 15 employees, they are not asked to furnish data on employment, so that the number employed in building is undoubtedly substantially in excess of that covered in these statistics. This is particularly true of the present time, when much of the considerable volume of work resulting from the Dominion Housing Act and the Government Home Improvement Plan, being carried out by the smaller contractors, will not be reflected in the monthly surveys of employment.

Road construction as reported to the Dominion Bureau of Statistics afforded less employment in every month of 1936 than in the same period of 1935. The payrolls reported in the year under review averaged 50,342, ranging between 40,291 at February 1 and 61,689 at the beginning of November; in 1935 the average was 64,865. The 1936 indexes averaged 135·5, compared with 175·5 in 1935, and 221·3 in 1934. In many districts, road work normally is supplementary to the occupations usually followed by nearby residents, particularly agriculturists during slack periods on their farms, but in the last few years, has provided work for men on unemployment relief projects. The number[1] engaged by the Dominion and Provincial governments on the Trans-Canada Highway and other unemployment relief projects and camps, however, was smaller than during 1935, and there were not so many employed on work of this nature by the municipalities and other authorities.

Railway Construction.—Employment in railway construction was generally rather more active, improvement being indicated in seven of the twelve months, while the working forces averaged 30,955, as compared with 27,417 in the preceding year. The reporting employers averaged 33, one fewer than in 1935. The mean index was 77·6, while in 1935, it was 68·8. In 1928, when activity was at its maximum in this record of fifteen years, an average payroll of 46,148 persons was reported, and the mean index stood at 116·7.

Services

Statements were received monthly from some 464 firms in this division, whose employees averaged 27,028. The situation showed improvement during eight months of the year under review, while employment in each month was in greater volume than at the same date of 1935. The index averaged 124·5, compared with 118·2 in the preceding year, and 115·1 in 1934. Employment in hotels and restaurants was brisker than in 1935, reflecting the generally improved business situation, together with the better tourist trade resulting therefrom. In laundering and dry-cleaning establishments, employment was also in greater volume than in the preceding year, the mean index, at 130·7, being nearly ten points higher.

Trade

Trade was generally at a higher level than in 1935; at the first of February, employment showed the usual pronounced contraction (in reaction from the intense activity of the Christmas and holiday season), and it also declined at the beginning of April and August. Apart from these recessions, the trend was steadily upward throughout the year under review. The payrolls of the 1,249 co-operating firms averaged 101,832 persons, and the index, 127·5, compared with 122·1 in 1935.

It has been mentioned in previous issues that during the depression many establishments, in order to keep on most of their usual staff, reduced the hours worked, so that the per capita earnings of the persons employed would, if available, have shown a greater falling-off than the personnel. In the same way, it is likely that the working hours

[1] See footnote on page 58.

of many men and women in trading establishments have recently been extended, with consequent increase in the earnings of the individual, as well as in the numbers employed.

Of the workers reported in the trade group during 1936, approximately 74 per cent were classified as employed in retail stores, in which activity was relatively greater than in wholesale houses. In recent years there has been a growing tendency for the larger stores and chain organizations to absorb the small businesses which would otherwise not be represented in these statistics, and this change in organization may have helped to keep the index of employment in trade at a relatively high level.

TABLES SHOWING EMPLOYMENT BY INDUSTRIES

Tables of index numbers, by economic areas, leading cities and industries, by months and with yearly averages, are published in the bulletin entitled "Annual Review of the Employment Situation in Canada during 1936," issued by the Dominion Bureau of Statistics. This bulletin, which contains full particulars regarding employment in the various districts and industries together with numerous charts illustrating the course of employment in recent years, will be forwarded on application to the Dominion Statistician.

Monthly index numbers have been published in each issue of the LABOUR GAZETTE, those for December 1 appearing elsewhere in this issue.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF DECEMBER, 1936

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of December was reported by the superintendents of the Employment Service to be as follows:—

Farming in the Maritime Provinces showed little change, with farm produce, though somewhat limited as to variety, plentiful at the holiday markets and prices good. Logging was quiet, being handicapped by recent mild weather. Many of the camps were closed for the holidays and were not likely to reopen until the new year. As the majority of fishing fleets were in harbour and winter quarters and adverse weather prevailed, only small catches of fish were reported. Coal mines in the New Glasgow area operated three and four days per week, while those in Cape Breton and vicinity worked from two to four days per week and one mine idle. Manufacturing remained unchanged, with nearly all plants running on full time. Building construction was slack, but all work under contract was progressing steadily. Road construction also continued. Passenger and freight traffic was heavy and owing to lack of snow, roads were kept open for motor traffic, which was brisk. Trade, both wholesale and retail, was very good and in some centres it was reported to have been the best since 1929. A fair demand for domestics existed in the Women's Division.

No activity was recorded in farming in the Province of Quebec. Logging also, except in Quebec City district, was not so active as usual, although, as a result of some new contracts, a number of men had been placed at Chicoutimi and a few others at Sherbrooke. Manufacturing, taken throughout the province, showed little change; metals, tobacco, fur, clothing and paper industries recorded some improvement, but boot, shoe, rubber and leather factories were rather quiet. Building construction, with the exception of relief projects, was slack; a number of men, however, were hired for road work, sponsored by the Government. Railroad transportation at Three Rivers was heavier, due to the close of navigation. Trade over the holidays was much better and proved encouraging for merchants. The demand for female domestics and cooks had been greater than usual, nearly nine hundred (900) persons having been placed in domestic service during December.

Except for an occasional request for men for chores, few calls were received for farm help in Ontario. Many men who came out of the logging camps for Christmas were expected to return early in the new year, but a reduction in the number was likely to take place, due to the fact that the cut had been completed in several camps, particularly in the North Bay district; elsewhere, although the demand for loggers and pulpwood cutters was good, some men were slow to accept the work offered on a piece basis. Mining was active at Timmins, the chief requests being for surface labour, but at Fort William, Port Arthur and Sudbury, conditions were quiet. Improvement continued in manufacturing, one of the best aspects of the situation being the increased wages and bonuses given to employees by industrial concerns. A few factories were closed for stock taking and canneries

and wineries, where seasonal workers had been employed, reduced their staffs, but many other plants reported business up from 15 per cent to 100 per cent. Building, which was more active than formerly, was still well below normal. Contracts under way were progressing steadily, but little new work, other than repairs, was being undertaken, however, the outlook for 1937 in the building trades appeared bright. Highway construction continued, but on a modified scale. More casual work was available in the larger cities, being augmented by requests for additional help from the Post Office Department, for the distribution of Christmas mail. Both the passenger and freight traffic was heavy and the Michigan Central machine shops at St. Thomas operated on full time. Trade was better than for several years past. The call for temporary help over the holidays in the Women's Domestic Section was much higher than usual, but the registration of experienced maids for household service continued light and such positions were difficult to fill.

The demand for farm help in the Prairie Provinces under the Farm Relief Plan slackened considerably during the holidays. Many unfilled orders remained, although some of these were likely to be completed at the beginning of the new year. Logging showed improvement, but mild weather affected the mines, with the result that pay cheques were disappointingly small. Manufacturing remained steady at Winnipeg, but quiet at Medicine Hat. Practically the only operations in building and road construction were those undertaken as relief measures. Christmas trade was good, with a decided increase in mail order shipments from outside points. Quietness prevailed in the Women's Division. Some orders for household domestics remained unfilled, the majority of these being listed under the Farm Relief Plan, but applicants were often lacking in experience and thus difficult to place.

Farming in British Columbia was very quiet and in the fruit industry, packing houses were on half time. Open weather along the coast continued favourable for logging. Many camps, nevertheless, had closed down for the holidays, but these were to reopen with the new year. Saw and shingle mills were busy with off-shore trade. Mining was active, with no shortage of help. Factories at Nelson were working full time. Some contraction was recorded in building, but other general construction work was fairly active and highway construction and the cutting of trails continued under the Government Relief Scheme. Drydocks and shipyards were quiet at Prince Rupert and Victoria, but longshoremen were busy at New Westminster, Vancouver and Victoria. At the latter ports part of the increase in labour was due to the longshoremen's strike in the United States' harbours. Railroads were busier with more passengers, freight and express. Trade was encouraging. Many women did not wish to work during the Christmas holidays, so that there was a decided falling off in registration in the Women's Division, but hotel orders for waitresses were numerous and casual help, accordingly, was supplied to stores, hotels and private homes.

Retirement Plan of National Grocers

According to an article appearing in the *Canadian Grocer* of December 11, 1936, the National Grocers Company, wholesale grocers with more than 30 branches in Ontario, has established in co-operation with employees, an "Employees Retirement Annuity Plan."

All permanent employees in the service of the company on July 1, 1936, were eligible as long as they were under the normal retirement age. Employees joining the service after July 1 became eligible upon completion of three months continuous service. While the normal retirement age is 65 years, under special circumstances retirements earlier or later are permitted. The amount of the annuity payable under such circumstances depends on the age of retirement and the total contribution made by and on behalf of the retiring member. Scheduled payments each month by employees depend on the monthly salary received.

It was also announced that in appreciation of the services given by employees during past years, the company was giving credit in the plan for past services, this credit to be half of the rate effective on future services. In other words, the company was bearing the entire cost of such benefits, and the amount to be expended in so far as past services were concerned approximates $150,000. The company's contribution in respect of credit for future services was approximately in the ratio of half the amount contributed by the members.

In a recent press interview, President Roosevelt was reported to have indicated his intention to seek an amendment to the Social Security Act to wipe out or curtail the proposed $40,000,000,000 old age reserve fund (LABOUR GAZETTE, December, 1936, page 1101) and to put the pension payments on a "pay-as-you-go" basis

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN NOVEMBER, 1936

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reported on December 1 was 10,106, the employees on their payrolls numbering 1,044,969 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for November was 1,821, having an aggregate membership of 182,688 persons, 12·7 per cent of whom were without employment on December 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of December, 1936, as Reported by the Employers

Following a period of marked expansion, industrial employment at the beginning of December showed a seasonal contraction, which was the first general decline indicated since April 1. The reduction at the latest date was the smallest recorded at December 1 in many years, being considerably less than the average loss between November 1 and December 1 in the period, 1921-1935. The situation continued decidedly more favourable than in any month of the years 1931-1935.

The Dominion Bureau of Statistics tabulated data from 10,106 employers, whose payrolls were reduced from 1,053,548 at the beginning of November to 1,044,969 at December 1, 1936. The unadjusted index (1926=100) then stood at 110·1, compared with 111·0 at November 1, 1936, and 104·6 at the same date in 1935. In preceding years since 1920, the December 1 index has been as follows:—1934, 98·9; 1933, 91·8; 1932, 83·2; 1931, 99·1; 1930, 108·5; 1929, 119·1; 1928, 116·7; 1927, 108·1; 1926, 102·3; 1925, 96·5; 1924, 91·9; 1923, 96·9; 1922, 96·3, and 1921, 88·3. As a result of the less-than-normal curtailment in staffs at the latest date, the seasonally-adjusted index number rose from 106·6 at November 1 to 107·8 at December 1.

Manufacturing (notably of food and lumber products), mining, communications, transportation as a whole, construction and services showed seasonal recessions at December 1, 1936. The losses in manufacturing and transportation were decidedly less than average, according to the experience of the last fifteen years; those in construction, on the other hand, exceeded the average losses at December 1 in the period 1921-1935, but were smaller than those which took place at the beginning of December of last year. On the other hand, logging and trade reported marked improvement, the gains in employment being greater than the average seasonal advances noted in these industries at December 1 in the years since 1920.

The staffs of the 9,462 firms making returns for December 1, 1935, had aggregated 985,155, a decline of 28,566 from the preceding month; this loss in employment had exceeded the average reduction between November 1 and December 1 in preceding years of the record. Manufacturing, mining, communications, transportation, construction and services had shown seasonal curtailment, while improvement of a similar character had occurred in logging and trade.

A brief survey of general conditions at the end of 1936 shows that the index of 110·1 at December 1 was 11·1 per cent higher than at the opening of the year; since the average advance between January 1 and December 1 in the last fifteen years has approximated 8 per cent, the improvement effected during the last twelve months has considerably exceeded the normal. Outstanding features of the 1936 situation have been the pronounced and gen-

eral revival in manufacturing, mining and logging, although most of the industries included in the monthly surveys of employment showed decided betterment as compared with the last few years, construction being the great exception. Geographically, the recovery on the whole has also been widespread, although activity in the Prairie Provinces in the last two months was less than in the same period of 1935.

A review of employment during the year 1936, in considerable detail, appears elsewhere in this issue.

at December 1 in the years 1921-1935, but was smaller than that noted at December 1 in certain other years of the record, notably in 1929, when approximately 7,600 men and women had been laid off by the employers whose data were tabulated. The index at the latest date, standing at 115·3, was higher than at the beginning of December of other years of the record, including 1929, when the extraordinarily large contraction mentioned above had considerably reduced the general index. Most of the decrease at the date under review took place in construction, although manu-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Employment by Economic Areas

Two of the five economic areas registered heightened activity of a contra-seasonal character at December 1, there being a considerable increase in Quebec, and a slight advance in Ontario. On the other hand, the trend in the Maritime and Western Provinces was downward. Except in the Prairies, employment generally was brisker than at the beginning of December of last year.

Maritime Provinces.—There was a seasonal reduction in the Maritime Provinces, according to returns from 706 firms employing 83,093 workers, as against 86,060 at November 1. This decline exceeded the average recorded

facturing, particularly of pulp and paper, lumber and food products, was also slacker than in November. Logging showed substantial gains, and coal mining, shipping and stevedoring and retail trade were also seasonally active.

At December 1, 1935, the 654 reporting establishments had 76,711 employees, as compared with 79,193 in the preceding month.

Quebec.—There was a further improvement in the situation in Quebec, according to statements from 2,395 employers of 312,279 persons, or 6,422 more than at the first of November. Employment has shown a falling off at the beginning of December in thirteen of the

preceding fifteen years for which statistics have been prepared, so that the upward movement indicated at the latest date is particularly interesting. The index rose from 110·3 at November 1 to 112·6 at December 1, 1936, when it was 8·5 per cent higher than at December 1, 1935. Manufacturing reported moderate curtailment as compared with November 1, 1936; the largest losses, which were seasonal in character, were in the food, leather, lumber, metal and textile divisions, while tobacco and beverage factories were decidedly busier. Building and railway construction were seasonally slacker, but the opening of certain unemployment relief projects resulted in heightened activity in the highway group. Logging and trade also recorded greatly increased employment, the gains being of a seasonal nature, while steam railway transportation was busier. Statistics had been tabulated from 2,239 firms with a combined payroll of 286,467 persons at December 1, 1935, being a decline of over 3,500 from their November 1 staffs.

Ontario.—Employment in Ontario showed a slight contra-seasonal increase at the beginning of December, when manufacturing, logging and retail trade reported considerably heightened activity. Within the first-named, iron and steel, tobacco and beverage factories showed marked improvement. On the other hand, there were large seasonal losses in the vegetable food and lumber divisions. Mining, transportation and construction were also slacker, the losses in construction being pronounced. The firms making returns for December 1, 1936 (4,499 in number) had 438,641 employees, compared with 438,135 at the beginning of November. The index, at 112·9 at December 1, 1936, compared favourably with that of 107·0 at the same date in 1935; the 4,180 employers whose reports were then

TABLE I.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS

(AVERAGE CALENDAR YEAR 1926=100)

—	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia
Dec. 1, 1921	88·3	100·4	79·8	91·5	94·9	78·9

Relative Weight of Employment by Economic Areas as at Dec. 1, 1936	100·00	7·9	29·9	42·0	12·0	8·2

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns for the date under review.

compiled had reported 410,441 persons on their paylists, compared with 422,383 at November 1, 1935.

Prairie Provinces.—Seasonal declines on a scale above the average noted in the years since 1920 were indicated in the Prairie Provinces at the date under review; the 1,460 reporting employers had let out 9,320 workers since November 1, thereby reducing their staffs to 125,321 at December 1. Retail trade and logging increased the numbers at work, the gains being seasonal. On the other hand, transportation, manufacturing and construction afforded less employment; the losses in personnel in the last-named were considerable. Employment at the beginning of December was at a rather lower level than at the same date in 1935, when the decrease had been somewhat smaller, according to data from 1,382 establishments with 128,138 employees, compared with 136,671 at the first of November, 1935.

British Columbia.—Further contractions occurred in British Columbia, in accordance with the movement almost invariably noted at the beginning of December in this record of sixteen years. There were gains in trade, but manufacturing was seasonally slacker, chiefly in food factories, and transportation and construction also released employees. A rather smaller decrease had been recorded at December 1, 1935, when the index was slightly lower. The 1,046 firms reporting for the date under review had 85,635 employees, as compared with 88,855 in their preceding statement. At December 1, 1935, 1,007 employers had reported a staff of 83,398 persons, or 2,100 fewer than at November 1.

Table 1 gives index numbers by economic areas.

Employment by Cities

Of the eight centres for which separate tabulations are made, Montreal, Hamilton

Relative Weight of Employment by Cities as at Dec. 1, 1936	14·1	1·2	12·6	1·4	3·1	1·7	3·9	3·3

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns for the date under review.

and Windsor showed improvement as compared with Nov. 1, while lessened activity was indicated in Quebec City, Toronto, Ottawa, Winnipeg and Vancouver. Except in Quebec, the situation in each of these cities was better than at Dec. 1 in any of the last four years.

Montreal.—There was a considerable increase in the employment afforded by the 1,371 co-operating firms, whose staffs were enlarged by 5,516 persons to 147,709 at the beginning of December. Manufacturing on the whole reported rather less employment, mainly in textile, electrical apparatus, leather and iron and steel plants; on the other hand, tobacco and beverage factories were more active. Steam railway transportation and trade showed improvement, while there were substantial gains in construction, chiefly as a result of unemployment relief works undertaken in the last few weeks. Without these, however, the trend in Montreal was upward. A small increase had been noted at the same date of last year, when the index of employment was several points lower than that of 98·3 at the latest date. The 1,298 establishments furnishing returns for December 1, 1935, had reported 138,249 employees, an increase of 195 over their staffs in the preceding month.

Quebec.—Industrial activity in Quebec City declined moderately, 225 workers being laid off by the 174 employers whose returns were received, and who had 12,706 employees at December 1; this reduction was smaller than the average loss indicated at that date in the years since 1923. The largest contractions since November 1, 1936, were in manufacturing and building construction, while trade and transportation showed some improvement. The general recession indicated at the beginning of December in 1935 had been on a

Relative Weight of Employment by Industries as at Dec. 1, 1936	100·00	51·9	7·2	6·6	2·1	9·9	9·1	2·6	10·6

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns for the date under review.

somewhat smaller scale, and the index was then a few points higher.

Toronto.—Decreases in personnel were recorded in Toronto by 1,521 firms who employed 131,398 persons, as compared with 131,784 at the beginning of November. Trade showed noteworthy improvement and services were also more active. Manufacturing, however, was seasonally dull, the textile group reporting the greatest reductions. On the whole, much larger losses had been registered at December 1 of last year, and the index of employment then was nearly five points lower than that of 105·7 at the latest date. For December 1, 1935, 1,406 establishments had made returns, showing that they employed 123,162 workers, compared with 124,250 at November 1.

Ottawa.—There was a falling-off in Ottawa, where manufacturing reported moderate curtailment, and construction was also quieter. Two hundred and two employers recorded a combined payroll of 13,811 workers, as against 14,336 in their last report. Employment was in slightly greater volume than at the beginning of December, 1935, although the decline then indicated had been on a smaller scale.

Hamilton.—A further increase occurred in Hamilton, where an aggregate working force of 32,725 persons was employed by the 289 firms furnishing data, who had 32,310 employees on their November 1 staffs. Manufacturing as a whole was rather brisker, due to improvement in iron and steel and some other branches In the non-manufacturing division, transportation, construction and trade also showed some gains. The index, at 101·7, was slightly higher than at the same date of a year ago, when the tendency had been downward.

Windsor.—There was another advance in Windsor, mainly in manufacturing. Statements were tabulated from 174 employers with 17,653 workers, compared with 17,185 in the preceding month. A similar gain had been

[1]The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

indicated at December 1, 1935, but the index was then over ten points lower.

Winnipeg.—Employment showed a further slight recession in Winnipeg, according to data received from 483 firms employing 40,639 persons, as compared with 40,737 at November 1. A substantial reduction took place in manufacturing, mainly in food and textile plants; there was also a decline in communications and construction, while trade showed greatly heightened activity of a seasonal character, and transportation was also brisker. The general index, at 94·7, was fractionally higher than at the same date of last year, when an increase had been noted.

Vancouver.—Employment in Vancouver again declined, according to 437 employers of 34,130 workers, as compared with 34,406 in the preceding month. Manufacturing, mainly of food products, was rather slacker, and construction also afforded less employment, but trade showed improvement in preparation for the holiday season. A larger loss had been reported at the beginning of December, 1935; the index then was nearly six points lower than that of 106·0 reported at the latest date.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—A seasonal decrease in employment occurred at Dec. 1 in manufacturing establishments, 5,841 of which employed 542,803 operatives, compared with 546,159 at Nov. 1. This decline of 0·6 per cent was much smaller than the normal seasonal loss indicated in the experience of the fifteen preceding years for which data are available, so that the index, after correction for seasonal movement, showed an increase over the preceding month, standing at 108·1 at the beginning of December, as compared with the seasonally adjusted index of 106·6 for Nov. 1. Fur, tobacco and beverage and iron and steel works reported considerably heightened activity. On the other hand, there were reductions (in most cases of a seasonal character) in the food, lumber, textile, leather, pulp and paper, clay, glass and stone, electrical apparatus, electric light and power, musical instrument and non-ferrous metal product industries. A larger decline, on the whole, had been indicated at Dec. 1, 1935, and the crude index was then between five and six points lower.

The unadjusted indexes of factory employment (based on the 1926 average as 100) have been as follows at Dec. 1 in the years since 1920: 1936, 107·0; 1935, 101·4; 1934, 91·3; 1933, 84·4; 1932, 80·3; 1931, 89·6; 1930, 100·6; 1929, 112·8; 1928, 112·9; 1927, 104·3; 1926, 101·5; 1925, 95·3; 1924, 88·7; 1923, 95·5; 1922, 94·9 and 1921, 85·8.

For Dec. 1, 1935, returns were received from 5,579 manufacturers having 510,365 operatives, as against 521,318 at the beginning of November a year ago.

The continued improvement in manufacturing has been a satisfactory feature of the situation during 1936. The Dec. 1 index of 107·0 was 10·5 per cent higher than at the beginning of 1936; this was an increase during the year that exceeded the average advance indicated between Jan. 1 and Dec. 1 in the experience of the years since 1920. During 1936, the general movement in manufactures was uninterruptedly favourable from the beginning of January until Oct. 1; seasonal curtailment occurred in the last two months of the year, but in each case the loss was smaller than is customary at the time of year, as indicated in the experience of the period, 1921-1935. The gains over the year have been widely distributed among the various industries grouped under manufacturing, while all five economic areas have shared in the general recovery in these important classes.

Animal Products—Edible.—There were further seasonal declines in fish canneries, while meat-packing plants and dairies were also slightly slacker. There was a reduction of 834 in the staffs of the 286 firms making returns, who had 24,743 employees. This decrease involved a smaller number of persons than that recorded at the same date in 1935, and employment was then at a lower level.

Leather and Products.—Employment in this industry showed a considerable loss at the beginning of December, occurring almost entirely in boot and shoe factories. Statements were tabulated from 301 manufacturers, employing 21,573 persons, as compared with 22,170 at November 1. Similar reductions had been noted at December 1, 1935; the index was then rather lower.

Lumber and Products.—Seasonal curtailment of operations on a smaller scale than at the beginning of December, 1935, took place in this group; the losses were principally in rough and dressed lumber mills, and occurred mainly in Quebec and Ontario. Data were received from 859 lumber firms, whose staffs declined from 43,157 workers at November 1 to 41,270 at December 1. The index was several points higher than at the same date a year ago.

Plant Products—Edible.—There was a seasonal reduction of 4,099 employees in the vegetable food factories whose returns were received; they reported a combined working

force of 35,710 operatives. The curtailment indicated was chiefly in canneries, but flour and cereal mills were also slacker, while improvement occurred in sugar refineries. The largest losses, on the whole, were in Ontario. The index of employment at December 1, 1936, was decidedly higher than at the beginning of December, 1935.

Pulp and Paper.—Statements were received from 609 manufacturers in the pulp and paper industry, whose payrolls were decreased by 237 persons to 64,300 at the beginning of December. Employment was brisker than at the same date in 1935, when a similar decline had occurred. Improvement took place in printing and publishing establishments, while pulp and paper mills released employees. The largest reductions in personnel were in the Maritime Provinces.

Rubber Products.—Little general change was reported in the rubber group. The working forces of the 53 co-operating establishments stood at 12,898, compared with 12,938 at November 1. An increase had been shown at the corresponding date in 1935, but the level of employment was then lower.

Textile Products.—There was a seasonal recession in employment in these industries; most of this occurred in clothing and headwear factories, while cotton, woollen and some other mills showed improvement. Returns were compiled from 1,048 manufacturers employing 104,252 workers, or 540 fewer than in the preceding month. There was a decidedly greater loss at the beginning of December, 1935, when the index was rather lower.

Tobacco, Distilled and Malt Liquors.—Employment in tobacco factories greatly advanced, and there was also an increase in beverage works. An aggregate payroll of 18,330 persons was indicated by the 187 co-operating firms, compared with 15,517 at the beginning of November. Similar gains, on the whole, had been shown at the same date in 1935, but the index was then higher.

Clay, Glass and Stone Products.—Further seasonal reductions occurred in this industry, 173 persons being released by the 204 co-operating manufacturers, who had 9,084 on their payrolls. A downward tendency had also been in evidence at December 1, 1935, when the volume of employment was smaller.

Chemicals and Allied Products.—A slight falling-off was indicated in the chemical group at December 1, according to data received from 201 firms having 11,810 employees, as compared with 11,858 in the preceding month. An advance had been noted at the beginning of December, 1935, but the index then was lower than at the date under review.

Electric Light and Power.—There was a decrease in employment in electric current plants, 96 of which had 14,840 employees, or 465 fewer than at November 1. The greatest losses occurred in Ontario. A smaller reduction had been reported at the beginning of December, 1935, but the index number then was slightly lower.

Electrical Appliances.—A decline was noted in electrical apparatus plants; 126 manufacturers employed 17,185 persons, as compared with 17,366 in their last report. Employment at December 1, 1935, was at practically the same level as at the date under review, although the reductions then reported involved many more workers.

Iron and Steel Products.—There was a considerable expansion in employment in iron and steel factories; the rolling mill, machinery, agricultural implement, vehicle, wire and some other groups increased the number employed. On the whole, there was an increase of 3,014 in the staffs of the 863 co-operating manufacturers, who employed 120,071. The general level of activity in this group was decidedly higher than at the same date in the preceding year, when a contraction had been indicated.

Non-Ferrous Metal Products.—A decline occurred in this division at the beginning of December, according to data received from 169 employers of 22,368 persons, as compared with 22,476 in the preceding month. The index was much higher than at December 1, 1935; a slightly larger loss had then been registered.

Non-Metallic Mineral Products.—There was a further moderate reduction in the manufacture of non-metallic mineral products; 141 firms employed 14,330 workers, or 53 fewer than at the beginning of November. Activity in this group was higher than at December 1, 1935, when curtailment had been noted.

Logging

Continued advances were shown in logging, in which activity increased in all provinces except British Columbia. Statements were tabulated from 363 logging camps having 75,664 employees, or 16,922 more than in their last report. This gain involved a greater number of persons than that registered at the same date in 1935, being also above the average increase from November to December in the years since 1920, while the index was higher than at December 1 in other years of the record.

Mining

Coal.—Employment in coal mines increased at the beginning of December, 181 persons being added to the payrolls of the 104 co-operating operators, who had 26,030 employees. There was improvement in the Maritime Provinces and British Columbia. A larger gain had been shown at the corresponding date in 1935; the index number then, however, was slightly lower.

Metallic Ores.—For the first time in 1936, there was a decrease in employment in metallic ore mines; 359 workers were laid off since November 1 by the 218 employers from whom information was received, and who had 34,655 persons on their pay lists. A loss had also been indicated in December, 1935, when the number employed by the firms reporting in this division was decidedly smaller.

Non-Metallic Minerals other than Coal.—Curtailment in employment was noted in the extraction of non-metallic minerals, other than coal. In this division, 85 firms furnished data showing that they employed 8,709 persons, as compared with 9,211 at November 1. Activity was greater than in the same month of 1935, when a loss had also been indicated.

Communications

Decreases in personnel were noted on telegraphs and telephones; 364 persons were released by the co-operating companies and branches, which had 21,646 employees at the date under review. The index was fractionally higher than in the early winter of 1935.

Transportation

Street Railways and Cartage.—This division was seasonally quiet, the largest losses in employment occurring in Ontario. Data were compiled from 236 firms whose staffs declined from 27,128 at November 1 to 26,929 at the beginning of December. This loss was not so pronounced as that recorded at the same date in 1935, and the index then was lower.

Steam Railways.—The trend of employment in railway operation was downward, 100 employers and branches reporting 59,687 workers, as compared with 60,278 in the preceding month. There were decreases in Ontario and the Western Provinces. The index number was rather higher than at December 1, 1935, when much larger reductions had been indicated.

Shipping and Stevedoring.—Slight improvement was registered in shipping; an increase of 73 persons was reported by the 111 co-operating employers, whose staffs aggregated 17,172. A greater increase had been noted at December 1, 1935, but the index then was rather lower.

Construction and Maintenance

Building.—Employment in building construction showed a seasonal falling-off from the preceding month. Statements were compiled from 749 contractors employing 21,081 persons, as compared with 24,971 at November 1. The most extensive curtailment was in Quebec and Ontario. Shrinkage on a smaller scale had been reported at December 1, 1935, and employment was then in greater volume.

Highway.—Important reductions were noted in the staffs of the 376 highway contractors furnishing statistics, who employed 49,885 workers at December 1, as compared with 61,754 in the preceding month. Employment decreased in all provinces except Quebec, where unemployment relief projects had been undertaken. A larger number of persons, on the whole, had been laid off at December 1, 1935, but the index was then many points higher.

Railway.—Activity on railway construction and maintenance showed another seasonal decline, which involved more workers than that occurring at the same date in 1935; the index was then a few points lower than at December 1, 1936. Statistics were received from 36 contractors and divisional superintendents whose staffs were diminished from 31,127 men at November 1 to 23,736 at the date under review. The most pronounced contractions were in the Prairie Provinces, although there were large losses throughout the country.

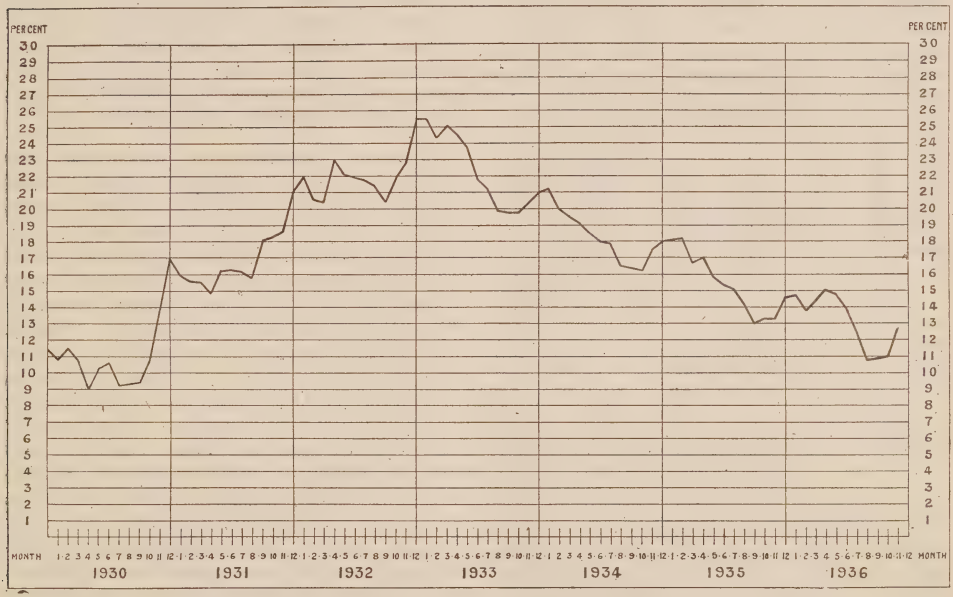
Services

Reductions were reported by the 472 co-operating service firms, who had 26,672 employees, or 562 fewer than in the preceding month. Hotels and restaurants showed curtailment, while little general change was indicated in other divisions. Employment was more active than at December 1, 1935, when a smaller loss had been recorded.

Trade

Important seasonal increases were again noted in retail trade, but wholesale houses released some employees. Returns were received from 1,329 trading establishments with 110,300 employees, or 3,328 more than at November 1. The index was higher than at the same date in the preceding year, or indeed, than in any other December on record, being fractionally higher than at December 1, 1929.

The additions to payrolls recorded at December 1, 1936, exceeded the average increase at that date in the years since 1920.



TABLES

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated areas or industry, is of the total number of employees reported in Canada by the firms making returns at the date under review.

(2) Unemployment in Trade Unions at the close of November, 1936

The term unemployment as used in the following article has reference to involuntary idleness due to economic causes. Persons who are engaged at work outside their own trades or who are idle owing to illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The volume of unemployment among Local Trade Unions at the close of November was slightly in excess of that registered in the preceding month according to the returns compiled from a total of 1,821 labour organizations involving a membership of 182,688 persons. Of these, 23,287 were without work on the last day of the month, a percentage of 12·7 as contrasted with 11·0 per cent of inactivity in October. Little change in the situation was shown from November a year ago though the tendency was favourable, the percentage of idleness for that month standing at 13·3. With the exception of New Brunswick all provinces indicated some lessening in employment available from October, which was most marked in the province of Ontario where restricted activity in clothing establishments was the determining factor in the curtailment recorded. The recessions in the other provinces were not of particular significance, while in New Brunswick the employment trend though upward varied very slightly from October. Contrasted with the returns for November, 1935, Alberta, British Columbia and Quebec unions all showed improvement of around 2 per cent during the month

reviewed and the level of activity in New Brunswick and Manitoba was slightly above that of November a year ago. Nova Scotia, Ontario and Saskatchewan unions, however, reported employment declines on a small scale.

The returns on unemployment affecting Local Trade Union members in the largest city in each province with the exception of Prince Edward Island are tabulated separately each month. Of these, Saint John members showed a rather noteworthy gain in employment during November from the previous month, and improvement of somewhat lesser degree was reflected from Halifax. Toronto and Edmonton unions, however, registered moderate curtailment in work afforded, and in Vancouver, Regina, Winnipeg and Montreal there was some slight lowering in the volume of work accorded. Decidedly better conditions were manifest in Saint John when compared with the returns for November, 1935, and in Montreal also, advancement on a substantial scale was noted. The gains recorded in Regina, Edmonton, Vancouver and Halifax were of moderate proportions, while in Winnipeg the variation was slight though favourable. Toronto unions alone, showed employment contractions which were, however, but fractional.

From the chart which accompanies this article and illustrates the trend of unemployment by months from January, 1930, to date, it will be noticed that the projection of the curve during the month under review was upward from the previous month denoting an increasing unemployment volume. The point attained at the close of the month was, however, below that of November, 1935, indicative of a greater abundance of available work during the month reviewed.

A downward movement of employment was evident in manufacturing industries during November over both the previous month and November, 1935, the contractions in the former comparison being the more noteworthy. This was apparent from the reports received from 508 local unions with a membership aggregate of 61,907 persons, 9,642 or 15·6 per cent of whom were idle at the end of the month as contrasted with percentages of 11·6 in October and 13·6 in November, 1935. Quietness in the garment trades was an important factor in the adverse situation noted in both comparisons. Unemployment for leather, and hat, cap and glove workers, was also considerably more prevalent than in October, and less favourable conditions obtained for fur, glass and wood workers, general labourers, paper makers, and bakers and confectioners. Heightened activity on a pronounced scale was reflected by brewery workers, and the situation for printing tradesmen, textile and carpet, iron and steel, jewelry, and cigar and tobacco workers, improved slightly. In addition to the garment trades, glass, hat, cap and glove, and leather workers, and general labourers, all showed some curtailment of activity from November, 1935, and declines in employment on a small scale were evident among jewelry, fur, and brewery workers, and paper makers. On the

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

other hand, extensive employment advancement was reflected by wood workers, and decided recovery was also shown by cigar and tobacco, and textile and carpet workers, and bakers and confectioners. In the printing, and iron and steel trades the tendency was favourable though the change from November, 1935, was small.

Coal mining, on the whole, showed little variation in conditions during November from either the previous month or November, 1935, the same degree of change being shown in each comparison. Reporting for November were 47 unions of coal miners combining a membership of 15,028 persons, 745 or 5·0 per cent of whom were out of work on the last day of the month compared with 4·6 per cent of inactivity in both the preceding month and November, 1935. In Alberta, the employment trend was slightly upward from the previous month and also from November a year ago, the gain in the latter comparison being somewhat greater. This better movement was, however, more than counteracted by minor contractions evident in British Columbia and Nova Scotia mining areas in both comparisons. Short time work was prevalent among the miners throughout November.

The building and construction trades showed a slight lowering in the employment volume afforded during November, continuing the less favourable tendency noted in the two preceding months and incidental to the autumn and winter seasons. This was reflected by reports forwarded by 205 associations of building and construction tradesmen with a membership numbering 19,431 persons, 6,628 or 34·1 per cent of whom were unemployed on the last day of the month contrasted with 32·6 per cent in October. Substantial employment recovery was manifest from November, 1935, when 42·5 per cent of the members recorded were without work. Hod carriers and building labourers, and bridge and structural iron workers, whose combined membership was rather small, registered noteworthy percentage increases in employment from October, and among electrical workers and plumbers and steamfitters, the trend was toward greater activity though the change was slight. On the other hand, steam shovelmen, and tile layers, lathers and roofers, were much slacker than in October, and activity was considerably curtailed for painters, decorators and paper hangers. More moderate recessions were evident among granite and stone cutters, while among bricklayers, masons and plasterers, and carpenters and joiners, employment was very slightly restricted.

When contrasted with the reports for November, 1935, in the building and construction trades, decided employment revival was apparent among steam shovelmen, carpenters and joiners, electrical workers, hod-carriers and building labourers, and plumbers and steamfitters during the month reviewed, and a somewhat better level of activity was reflected by bridge and structural iron workers, and painters, decorators and paper hangers. Contractions in activity of moderate proportions, however, were registered by granite and stone cutters, while brick-layers, masons and plasterers showed but fractional recessions. Among tile layers, lathers and roofers the unemployment volume remained the same as in November, 1935.

The transportation industries with 807 associations combining a membership of 58,093 persons, at the close of November showed that 3,828 or a percentage of 6·6 were idle, contrasted with 6·1 per cent of unemployment in October. Steam railway employees, whose returns included over 79 per cent of the entire group membership reported, indicated a nominal adverse employment tendency from October, and among navigation workers, conditions were somewhat quieter. Street and electric railway employees, and teamsters and chauffeurs, however, reported improvement of less than one per cent. An upward trend of activity was noted in the transportation industries, as a whole, from November, 1935, when 7·5 per cent of inactivity was recorded. The steam railway division was mainly responsible for this better movement, though teamsters and chauffeurs also contributed to the total advancement. The situation for navigation workers and street and electric railway employees varied but slightly from November, 1935, the tendency, however, being less favourable.

An almost unchanged situation was apparent among retail shop clerks during November from the previous month, unemployment standing at 4·7 per cent as compared with a percentage of 4·8 in October. The percentage for November was based on the reports tabulated from 5 associations with a membership numbering 1,439 persons. Some curtailment of activity was evident, however, from November, 1935, when 1·8 per cent of idleness was recorded.

Among civic employees the tendency was toward greater activity during November than in either the previous month or November, 1935, though the variation in each comparison was but fractional. Reports were forwarded from 80 associations of these workers includ-

29936—6½

ing a total of 8,607 members, 124 or 1·4 per cent of whom were out of work at the close of the month as compared with 1·6 per cent in October and 2·0 per cent in November a year ago.

The miscellaneous group of trades with 131 unions involving a membership of 6,985 persons on the last day of November showed that 720 were unemployed, a percentage of 10·3 contrasted with percentages of 9·8 in October and 10·6 in November, 1935. Stationary engineers and firemen, and unclassified workers were afforded a slightly better volume of work than in October, but moderate contractions in activity were evident among theatre and stage employees. Declines of minor importance were recorded by hotel and restaurant employees, and barbers. Considerably better conditions prevailed for hotel and restaurant employees than in November, 1935, and among unclassified workers slight variation was noted, though the trend was upward. Stationary engineers and firemen, theatre and stage employees, and barbers, however, suffered losses in activity on a small scale.

The volume of unemployment among fishermen during November showed an increase over both the preceding month and November, 1935, the 3 unions making returns with 580 members, indicating that 38·8 per cent were idle on the last day of the month as compared with 25·9 per cent in October and 31·6 per cent in November a year ago.

Lumber workers and loggers reflected little change in conditions during November from the preceding month though the tendency was favourable, and improvement on a substantial scale was noted from November, 1935. Returns were compiled from 2 unions with a total membership of 1,365 persons, 2·1 per cent of whom were unemployed on the last day of November contrasted with 2·3 per cent in October and 12·1 per cent in November, 1935.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1935 inclusive, and also the percentages of unemployment by provinces for November of each year from 1919 to 1933 inclusive, and for each month from November, 1934, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for November, 1936

The volume of business transacted during the month of November, 1936 in offices operated by the Employment Service of Canada was over 5 per cent more extensive than in October, according to average daily placements made, but total placements for the month were slightly lower, as there were two less working days in November than in October. When compared with November a year ago, an increase also in average daily placements of nearly 6 per cent was shown; total placements, too, were higher, even though working days were again one less in November, 1936, than in the corresponding month of the previous year.

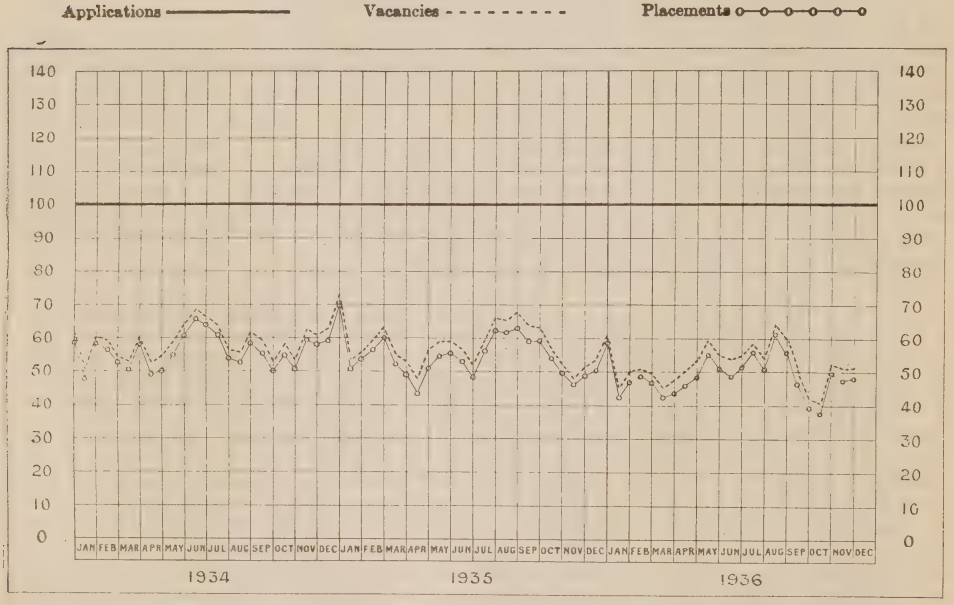
In industrial comparison with October noteworthy increases were recorded in farming and construction and maintenance, and minor gains in trade, manufacturing and transportation, which, however, were more than offset by a heavy loss in services, augmented by smaller declines in logging and mining. When compared with November, 1935, a very pronounced gain was recorded in farming, but this was also almost entirely counteracted by a heavy decrease in construction and maintenance, and lesser declines in logging, services and mining, nominal increases only being shown in manufacturing, trade and transportation.

The accompanying chart shows the trend of employment since January, 1934, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of both vacancies and placements in relation to applications fluctuated but little during the month and at the end of November both were at practically the same levels as those shown at the close of the corresponding period a year ago.

The ratio of vacancies to each 100 applications was 51·0 during the first half and 51·2 during the second half of November, 1936, in contrast with ratios of 47·8 and 51·3 during the corresponding periods of 1935. The ratios of placements to each 100 applications during the periods under review were 47·5 and 48·1 as compared with 46·1 and 48·8 in the corresponding month of 1935.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during November, 1936, was 1,397 as compared with 1,332 during the preceding month and with 1,288 in November a year ago.

The average number of applications for employment received daily by the offices



during the month under review was 2,732, in comparison with 2,823 in October and with 2,602 during November, 1935.

The average number of placements made daily by offices of the Service during November, 1936, was 1,307, of which 994 were in regular employment and 313 in work of one week's duration, or less, as compared with a total daily average of 1,241 during the preceding month. Placements in November a year ago averaged 1,234 daily, consisting of 870 placements in regular and 364 in casual employment.

The following table gives the placements effected by the offices of the Employment Service, each year, from January, 1926, to date:—

Year	Placements		
	Regular	Casual	Totals
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930	187,872	180,807	368,679
1931	175,632	295,876	471,508
1932	153,771	198,443	352,214
1933	170,576	181,521	352,097
1934	223,564	182,527	406,091
1935	226,345	127,457	353,802
1936 (11 months)	194,791	105,248	300,039

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

During the month of November, 1936, the offices of the Service referred 33,000 persons to vacancies and effected a total of 31,347 placements. Of these, the placements in regular employment were 23,836, of which 18,994 were of men and 4,842 of women, while placements in casual work totalled 7,511. The number of vacancies reported by employers was 24,251 for men and 9,271 for women, a total of 33,522, while applications for work numbered 65,556, of which 50,519 were from men and 15,037 from women. Reports for October, 1936, showed 34,615 positions available, 73,390 applications made and 32,266 placements effected, while in November, 1935, there were recorded 32,196 vacancies, 65,033 applications for work and 30,835 placements in regular and casual employment.

Nova Scotia

There was a decrease of over 5 per cent in the number of positions offered through Employment Offices in Nova Scotia during November when compared with the preceding month, but an increase of over 5 per cent in comparison with the corresponding month of 1935. Placements also were nearly 5 per cent less than in October, but nearly 5 per cent above the corresponding month of the previous year. Increased placements in services, and construction and maintenance caused the gain over November a year ago, but were offset, in part, by a decline in logging. Placements under construction and maintenance numbered 412 and in services 406. Of the latter, 255 were of household workers. There were 110

men and 87 women placed in regular employment during the month.

NEW BRUNSWICK

Orders received at Employment Offices in New Brunswick during November called for over 37 per cent fewer workers than in the preceding month and nearly 29 per cent less than during the corresponding month of 1935. Slightly lower percentages of loss were recorded in placements under both comparisons. Fewer placements under construction and maintenance and in services accounted for the decline from November, 1935. Small changes only were reported in all other groups, the majority showing improvement. Placements in services numbered 496, of which 321 were of household workers. During the month 10 men and 85 women were placed in regular employment.

QUEBEC

During the month of November, positions offered through Employment Offices in the Province of Quebec were 18 per cent higher than in the preceding month and nearly 89 per cent above the corresponding month of the previous year. Placements also showed an increase of over 18 per cent when compared with October and 91 per cent in comparison with November, 1935. The substantial increase over November a year ago was due to work provided in relief of unemployment on roads, sidewalks, parks, etc., chiefly in the City of Montreal. There were, in addition, small gains in manufacturing, farming and trade. There was a large reduction in bush placements and a moderate loss in services. Placements by industrial divisions included manufacturing 127; logging, 505; construction and maintenance, 6,043; trade, 109 and services, 2,224, of which 2,051 were of household workers. Placements in regular employment numbered 6,769 of men and 1,625 of women.

ONTARIO

Opportunities for employment, as indicated by orders received at Employment Offices in Ontario during November, were nearly 20 per cent less favourable than in the preceding month and over 12 per cent below the corresponding month of 1935. There was a decrease of over 20 per cent in placements when compared with October and of nearly 16 per cent in comparison with November a year ago. The most important decline in placements from November, 1935, was under construction and maintenance and accounted for the adverse change under this comparison for the Province as a whole. A small loss was shown in services. Bush placements were considerably higher and small gains were reported in farming and manufacturing. Industrial divisions in which most of the placements were effected during the month were manufacturing 615; logging 1,290; farming 675; transportation 171; construction and maintenance 2,459; trade 286, and services 3,181, of which 2,227 were of household workers. There were 3,757 men and 1,380 women placed in regular employment.

MANITOBA

Employment Offices in Manitoba received orders for over 7 per cent more workers in November than in the preceding month, but nearly 39 per cent less than during the corresponding month of the previous year. There was an increase in placements of over 7 per cent when compared with October, but a decline of nearly 38 per cent when compared with November, 1935. The reduction in placements from November a year ago was due to a substantial loss under construction and maintenance. Declines were also reported in services and mining. Farm placements were considerably higher and logging also showed an increase. Placements by industrial divisions included logging 260; farming 2,020; construction and maintenance 81, and services 549, of which 469 were of household workers. During the month 2,364 men and 314 women were placed in regular employment.

SASKATCHEWAN

Positions offered through Employment Offices in Saskatchewan during November were over 1 per cent less than in the preceding month, but over 105 per cent more than during the corresponding month in the previous year. There was an increase in placements of nearly 3 per cent when compared with October and of over 106 per cent in comparison with November, 1935. The increase over November of the previous year was due to a substantial gain in farm placements, the majority being made under the Farm Relief scheme. Placements were also higher in services and logging. The only loss of importance was in construction and maintenance, although minor declines were reported in manufacturing, trade and mining. Industrial divisions in which most of the placements were effected during the month were manufacturing 45; logging 65; farming 3,394; and services 916, of which 864 were of household workers. There were 3,381 men and 777 women placed in regular employment during the month.

ALBERTA

There was an increase of over 9 per cent in the number of positions offered through Employment Offices in Alberta during November, when compared with the preceding month, but a loss of nearly 33 per cent in comparison with the corresponding month of the previous year. Placements also were nearly 11 per cent higher than in October, but nearly 31 per cent below November a year ago. Placements under construction and maintenance were considerably less than during November, 1935, and accounted for the adverse change for the Province as a whole under this comparison. This decrease was partly offset by a large increase in bush placements. Small changes only were reported in all other groups, the largest being a decline in manufacturing and a gain in logging. Industrial divisions in which most of the placements were effected during the month were logging 114; farming 1,782; mining 78; construction and maintenance 132, and services 446, of which 359 were of household workers. Placements in regular employment numbered 2,124 of men and 307 of women.

BRITISH COLUMBIA

During the month of November, orders received at Employment Offices in British Columbia called for over 12 per cent fewer workers than in the preceding month and nearly 40 per cent less than during the corresponding month of 1935. Slightly higher percentages of loss were reported in placements under both comparisons. With the exception of a large reduction under construction and maintenance and a nominal decline in logging, all industrial divisions showed placement gains when compared with November, 1935. None, however, were large. The only increase of importance was in services. Placements by industrial divisions included manufacturing 44; farming 87; construction and maintenance 1,076; trade 48, and services 729, of which 496 were of household workers. There were 479 men and 267 women placed in regular employment during the month.

Movement of Labour

During the month of November, 1936, the Offices of the Employment Service of Canada effected 23,836 placements in regular employment, 12,467 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 898 were granted the Employment Service reduced transportation rate, 818 travelling to centres within the same province as the despatching office and 80 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may desire to journey to employment at a distance for which no workers are available locally.

Transfers at the reduced rate in Quebec during November originated at the Hull office which was instrumental in the dispatch of 10 bushmen to employment in the Pembroke zone. Persons securing certificates at Ontario centres during November totalled 554, these going to provincial situations. Travelling from Port Arthur 329 bush workers, 3 mine employees and 2 waitresses were bound for centres within the same zone. At Sudbury, 123 bush workers, at Fort William 68 bush workers and one taxi driver, and at Timmins 3 bush workers, were granted certificates for reduced transportation to points within their respective zones. The Timmins zone was also the destination of 25 bushmen shipped from North Bay. The labour movement in Manitoba during November was from Winnipeg and comprised the transfer of 126 persons, 56 of whom went to employment within the province and 70 to outside centres. Provincially all workers proceeded to various points in the Winnipeg zone, included among whom were 21 highway construction workers, 20 bush workers, 12 mine workers, one shoe maker, one survey man and one labourer. Journeying outside the province 69 bush workers were conveyed to Port Arthur and one farm hand to Prince Albert. Saskatchewan offices granted 114 certificates for reduced transportation during November, all to points within the province. The Prince Albert office issued certificates to 74 bushmen and the Yorkton office to 34 bushmen travelling to centres within their respective zones. From Regina one teacher was transferred within the territory covered by that zone office and one bushman to the Yorkton zone. On certificates secured at Saskatoon 3 bushmen were sent to Prince Albert and one farm hand to North Battleford. Alberta transfers at the reduced rate during November were provincial, numbering 90 and effected by the Edmonton Office. All of these were of persons destined to the Edmonton zone and included 52 bush workers, 28 fish company employees, 4 sawmill workers, 3 domestics, one druggist, one miner, and one yard foreman. In British Columbia during November, 4 persons travelled on reduced rate certificates to situations within the province. Proceeding from Vancouver one sawmill clerk was carried to Prince George and one mine engineer and one farm hand to Kamloops.

At Prince Rupert a certificate was issued to one tie maker going to employment within the zone embraced by that city office.

Of the 898 workers who were granted certificates at the Employment Service reduced transportation rate during November, 511 were conveyed by the Canadian National Railways, 344 by the Canadian Pacific Railway, 28 by the Temiskaming and Northern Ontario Railway, and 15 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During November, 1936

The aggregate value of the construction represented by the building permits issued by 58 cities during November was $3,030,425. This was a seasonal decline of $1,089,991, or 26·5 per cent, as compared with the October figure of $4,120,416, while the total was also lower by $417,228, or 12·1 per cent, that in November, 1935, when the estimated value of the building authorized by these cities was $3,447,653.

The value of the building permits taken out in the first eleven months of the present year was $36,584,168; this was lower than the aggregate of $44,158,767 reported in the period January-November, 1935, although it was decidedly higher than in the first eleven months of either 1934 or 1933. The cumulative total for the same period in each of the last five years has been very much lower than in any other year on record; the wholesale prices of building materials since 1931 have also been decidedly lower than in any preceding year since 1920.

Some 50 cities furnished detailed statistics for November, 1936, showing that they had issued over 280 permits for dwellings estimated to cost more than $1,198,000, and about 1,400 permits for other buildings estimated at almost $1,600,000. During October, permits were issued for the erection of about 400 dwellings and 2,250 other buildings, estimated to cost approximately $1,495,000 and $2,577,600, respectively, while an engineering project valued at $1,280 was also undertaken.

British Columbia reported a slight increase in the value of the building authorized as compared with October, 1936, but elsewhere reductions were indicated, that of $396,365, or 19·2 per cent, in Ontario being largest.

As compared with November, 1935, Nova Scotia, New Brunswick, Quebec, Manitoba, Alberta and British Columbia reported increases, of which the greatest was that of $119,596, or 23·1 per cent, in Quebec. Of the declines in the remaining provinces, that of $685,986, or 29·3 per cent, in Ontario was most pronounced.

Of the four largest centres, Vancouver recorded an increase in the value of the building authorized in November as compared with the preceding month, and also as compared with November of last year. In Montreal and Winnipeg the aggregate value was higher than in November, 1935, but lower than in October of this year, while Toronto showed a decrease in both comparisons. Of the other centres, New Glasgow, Sydney, Fredericton, Sherbrooke, Brantford, Galt, Hamilton, Peterborough, St. Catharines, Sault Ste. Marie, Woodstock, Brandon, St. Boniface, Lethbridge, Kamloops, Nanaimo and New Westminster reported higher building authorizations than in either comparison.

Cumulative Record for first eleven months 1920-1936

The following table shows the value of the building authorized by 58 cities during November and in the first eleven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1926 as 100. The January-November index numbers of wholesale prices of building materials in these years are also given (average 1926 = 100).

Year	Value of permits issued in November	Value of permits issued in first eleven months	Index of value of permits issued in first eleven months (1926=100)	Average indexes of wholesale prices of building materials in first eleven months (1926=100)

The aggregate for the first eleven months of this year was lower by 17·2 per cent than in 1935, but was higher than in the same period of either 1934 or 1933. With these exceptions, the 1936 total to date was lower than in any other year of the record. The average index number of wholesale prices of building materials, though slightly higher than in any of the years, 1931-1935, was considerably lower than in the months January to November of other years since 1920.

The accompanying tables give the value of the building permits issued by 58 cities in October and November, 1936, and November, 1935. The 35 cities for which records are available since 1910 are marked thus "*."

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

THE British *Ministry of Labour Gazette*, December, 1936, summarized the employment situation as follows:—

Employment in November showed little change, on the whole, as compared with the previous month, but was much better than in November, 1935. There was an improvement in employment between October 26 and November 23 in coal mining, the iron and steel industry, engineering, the motor vehicle and aircraft industry, metal goods manufacture, the cotton and wool textile industries, dock and harbour service, and the distributive trades. On the other hand there was a decline in building and public works contracting, in most of the clothing trades, including boot and shoe manufacture, in hotel and boarding house, etc., service, and in agriculture.

It is estimated that at November 23, 1936, the number of insured persons, aged 16-64, in employment in Great Britain, exclusive of agricultural workers, was approximately 11,120,000. This was 17,000 more than at October 26, 1936, and 560,000 more than at November 25, 1935.

Among workpeople, aged 16-64, insured against unemployment (excluding agricultural workers) the percentage unemployed in Great Britain and Northern Ireland, at November 23, 1936 (including those temporarily stopped as well as those wholly unemployed), was 12·2, as compared with 12·1 at October 26, 1936, and 14·5 at November 25, 1935. In Great Britain the percentage at November 23, was 11·9, the same as at October 26, as compared with 14·3 at November 25, 1935.

At November 23, 1936, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,367,492 wholly unemployed, 188,643 temporarily stopped, and 67,467 normally in casual employment, making a total of 1,623,602. This was 11,792 more than a month before, but 294,960 less than a year before. The total of 1,623,602 included 1,281,354 men, 45,019 boys, 252,198 women, and 45,031 girls. Of the total increase of 11,792 between October 26 and November 23, 1936, in the numbers registered as unemployed, agricultural workers accounted for approximately 9,000. Some part of this increase may be attributed to the operation of the provisions of the Unemployment Insurance (Agriculture) Act, under which benefit became payable to unemployed workers insured under the agricultural scheme as from November 5, 1936.

The persons on the registers included 1,379,932 insured persons who were applicants for insurance benefit or unemployment allowances, 135,372 other insured persons (including insured juveniles under 16 years of age), and 108,298 uninsured persons. Of the 1,379,932 applicants for benefit or allowances, 717,718 had claims admitted for insurance benefit, and 582,580 had applications authorized for allowances at November 23; the balance of 79,634 included 45,140 persons whose position under the conditions relating to contributions paid and benefit received had not been determined, 8,718 persons who had been disqualified for short periods from receiving benefit, and 25,776 persons whose needs had been held not to justify payment of unemployment allowances.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at November 23, 1936, was 1,693,945, as compared with 1,677,127 at October 26, 1936, and 1,982,713 at November 25, 1935.

United States

According to an announcement made by Miss Frances Perkins, United States Secretary of Labour, employment in the combined manufacturing and non-manufacturing industries surveyed by the U.S. Bureau of Labor Statistics showed a further expansion in November. "The November gain continues the unbroken succession of employment increases which have been shown each month since February of this year," Miss Perkins said. "Approximately 58,000 workers were returned to employment in these combined industries between October and November and weekly pay rolls in November were nearly $5,000,000 greater than in the preceding months."

The survey made shows that comparisons with November, 1935, indicate a gain of more than 1,100,000 workers over the year and an increase of nearly $50,500,000 in weekly wage disbursements in the industries covered by the Bureau of Labor Statistics, these industries employing more than one-half of the population at work.

The gains in employment between October and November in several of the industrial groups surveyed raised the November aggregates to the highest level of the recovery. Factory employment in November was above the maximum of any month since March, 1930. The further gain in employment in wholesale trade over the month interval raised the November, 1936, level above that of any month since December, 1930. Similarly in the important group of retail general merchandising establishments which includes department, variety, and general merchandising stores and mail-order houses, employment was above all preceding November levels since November, 1929.

Manufacturing Industries.—Factory employment in November showed a contraseasonal gain of 0·1 per cent. Pay rolls rose 1·5 per cent. These gains are particularly significant as employment has increased from October to November in only three of the preceding 17 years and pay rolls have increased in only two instances. The November, 1936, employment index (96·6) is above the level of any month since March, 1930, and stands 8·9 per cent above the index of November, 1935 (88·7). The November pay roll index (90·1) is the maximum recorded in any month since June, 1930, and is 19·3 per cent above November, 1935 (75·5). The foregoing indexes are a continuation of the revised series of indexes which were released on November 20 by the U.S. Bureau of Labor Statistics and which have been adjusted to census totals through 1933. The previously published series of indexes which had been adjusted to census totals only through 1931 and which has now been superseded by the revised series, stands at 92·4 for factory employment in November, 1936, and the pay roll index on the old basis is 87·9 for November, 1936.

Among the 54 industries in which gains in employment were reported between October and November, the most important gain (14·7 per cent) was in the automobile industry and was due to increased production on new models. Other industries in which substantial gains were reported over the month interval were: hardware (8·0 per cent); lighting equipment (7·1 per cent); woollen and worsted goods (6·9 per cent); wirework (6·3 per cent); iron and steel forgings (6·1 per cent); and slaughtering and meat packing (5·4 per cent). Industries of major importance in which smaller gains were noted were electrical machinery (3·3 per cent); cigars and cigarettes (2·6 per cent); cotton goods (1·9 per cent); furniture (1·5 per cent); foundries and machine shops (1·4 per cent); book and job printing (1·4 per cent); and steam and hot-water heating apparatus (1·0 per cent). The machine tool industry, which is a barometer of orders placed for power-driven metal-cutting machinery, added more workers in November, the increase of 1·4 per cent continuing the gains which have been reported successively each month, with but one exception, since October, 1934. The November employment index in this industry (127·8) is the highest level recorded in any month since June, 1930.

The largest declines in employment from October to November were seasonal in character. The canning and preserving industry

showed a decline of 44·0 per cent; millinery, 15·6 per cent; fertilizer, 9·0 per cent; tin cans and other tinware, 6·6 per cent; boots and shoes, 5·5 per cent; ice cream, 5·2 per cent; beverages, 4·1 per cent; agricultural implements, 3·8 per cent; and radios and phonographs, 3·6 per cent. The declines of 10·4 per cent in employment in cane sugar refining, 5·9 per cent in shipbuilding, and 5·2 per cent in sawmills, were due in part to the maritime strike, while labour disturbances in certain localities accounted for part of the decrease of 6·1 per cent in the glass industry. Employment in the blast furnace, steel works, and rolling mills industry showed a very slight decline (0·3 per cent). Pay rolls for November were 3·0 per cent greater than in the preceding month. The November employment index for this industry (107·6) is, with the exception of the immediately preceding month, the highest level recorded in any month since April, 1924.

The indexes of factory employment and pay rolls are computed from returns supplied by representative establishments in 89 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-1925, taken as 100. They have not been adjusted for seasonal variation. Reports were received in November, 1936, from 23,853 manufacturing establishments employing 3,956,536 workers, whose weekly earnings during the pay period ending nearest November 15 were $90,861,908.

Non-Manufacturing Industries.—The combined 16 non-manufacturing industries surveyed showed a net gain of more than 49,000 workers from October to November. The gains and losses in employment in November in these industries followed for the most part the usual seasonal pattern. Retail trade establishments added approximately 49,000 additional workers to handle increased business, while wholesale trade firms added more than 11,000 workers to their pay rolls. Anthracite and bituminous coal mines reported increased numbers of workers in November and small gains in employment were also reported in crude petroleum producing, electric railroad and motor-bus operation and maintenance, and brokerage offices.

Among the non-manufacturing industries reporting declines, seasonal recessions were shown in quarrying, laundries, dyeing and cleaning, hotels, and private building construction. Metal mines reported fewer employees in November than in the preceding month and slight decreases were shown in reports received from telephone and telegraph, power and light, and insurance companies.

Many establishments reported decreased pay rolls during the November 15 pay period due to election day and the observance of Armistice Day. A slightly offsetting influence to these pay roll decreases, however, was the wage-rate increases that were reported between October and November. Approximately 92,000 employees in the total of over 5,600,000 workers covered by the Bureau's November survey received wage-rate increases over the month interval, the major portion of these increases being reported in manufacturing industries.

Public Employment.—More than 3,133,000 workers were employed on projects of the Works Program in November, an increase of 57,000 over the number employed in October. The increase occurred on that part of the program operated by the Works Progress Administration and was partially accounted for by an expansion of employment in the drought areas. Over 2,726,000 of the workers engaged on The Works Program were employed on projects operated by the Works Progress Administration. Pay roll disbursements totalled in excess of $159,211,000 and the value of orders placed for materials amounted to $48,896,000.

On construction projects financed from funds provided by the Public Works Administration 270,000 were employed in November. Compared with October this was a decrease of 27,000 or 9 per cent in the number of wage earners. Total pay roll disbursements amounted to $20,539,000, a decrease of approximately $3,000,000 compared with the preceding month. Orders placed for construction materials were valued at $31,155,000. Of the total number of workers employed on the program in November, 165,000 were engaged on projects financed from E.R.A.A. funds.

A decrease of 14,000 in the number of workers employed in emergency conservation work (Civilian Conservation Corps) was reported in November. Of the 391,000 employees engaged on this program in November 341,000 were enrolled workers; 8,000, reserve officers; 2,000, educational advisers; and 40,000, supervisory and technical employees. Pay roll disbursements for the month amounted to $18,572,000.

Employment on construction projects financed from regular governmental appropriations was 150,000 in November compared with 156,000 in the preceding month. Pay roll disbursements for the month were $13,960,000. The value of material orders placed was $15,306,000.

The construction and maintenance of State roads furnished 182,000 persons with employment in November, a decrease of 2,000 compared with October. Pay roll disbursements for the month were more than $11,330,000.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less htan those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or

frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts, containing fair wage conditions have recently been executed by the Government of Canada.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, Remodelling, Repairs, etc.)

Construction of an Airmen's Barrack Block at the Royal Canadian Air Force Station, Rockcliffe, Ont. Name of contractors, Ross-Meagher Ltd., Ottawa, Ont. Date of contract, December 2, 1936. Amount of contract, $106,600.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	$0 70	8	44
Blacksmiths	0 70	8	44

Mechanics overalls	Woods Mfg. Co., Ltd., Ottawa, Ont.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Service: Business and Personal

TORONTO, ONTARIO.—A CERTAIN WINDOW CLEANING FIRM AND THE WINDOW CLEANERS' FEDERAL UNION No. 98.

Agreement reached following the strike reported in the LABOUR GAZETTE, November, 1936, page 986.

Agreement to be in effect from November 3, 1936, to November 2, 1937.

Only union members to be employed and only with the approval of the shop committee.

Hours: 44 per week. No work on five specified holidays.

Wages per hour: a minimum of 40 cents, with higher rates based on experience and service to a rate of 60 cents for expert employees. All work on scaffolds must be paid at a minimum of 60 cents. The basis of payment per hour will be from the time a man leaves the establishment for the job until he returns. In case of employees working on a percentage basis they will be paid 70 per cent of the amount charged by the firm for the work. For work out of town, fare, lodging and 35 cents daily towards meals is to be paid by the employer.

The firm is to supply all tools and materials necessary for the work.

The work is to be divided amongst the permanent staff as equally as possible and no new help is to be taken on as long as the present staff is not employed full time.

All questions as to this agreement, working conditions and wages shall be taken up between the duly elected shop chairman and committee and representatives of the firm. If they cannot agree, a third party will be called in to help settle the dispute.

Transportation and Public Utilities—Water Transportation

FORT WILLIAM, ONTARIO.—CANADIAN NATIONAL RAILWAYS, LAKEHEAD TERMINAL DIVISION AND THE WESTERN STEVEDORE COMPANY—SCHEDULES OF RULES AND RATES OF PAY GOVERNING THE SERVICES OF CERTAIN CLASSES OF EMPLOYEES ENGAGED IN HANDLING RAIL AND WATER FREIGHT.

Schedules to be in effect from November, 1936, to December 31, 1937, and thereafter, subject to thirty days' notice.

Hours: work between 1 a.m. and 6 a.m. is to be eliminated as far as possible, but men will work if required. If a new gang or additional men required to start work between 1 a.m. and 6 a.m. they will be paid for at least 5 hours' work.

Work on Sundays and seven specified holidays, time and one half.

Hourly wage rates for employees of Canadian National Railways: for day work: checkers and assistant stevedores 47 cents, sealers and coopers 42 cents, porters 40 cents, crane operators 65 cents; for night work 2 cents per hour extra. These rates are subject to a deduction of 10 per cent and a bonus of 6 cents per hour is added.

Hourly wage rates for employees of the Western Stevedore Company: stevedores 50 cents; checkers, sealers and assistant stevedores 45 cents, coopers 41 cents, porters 39 cents, crane operators 61½ cents. Night work 2 cents per hour extra except for stevedores, for whom rate is 50 cents for both day and night work. A bonus of 3 cents per hour is added to all the above rates.

Seniority to prevail in preference of employment as from season to season, and for promotions, providing ability and merit is sufficient.

Any employee who considers himself unjustly treated shall have a fair and impartial hearing and may be represented by one or two employees, and if an appeal is taken from the decision, he may again be represented.

Quebec Collective Labour Agreements Extension Act

The following agreement and amendments to agreements have been made obligatory by Orders in Council and are summarized in the next article:—

Building Trades, Chicoutimi and Lake St. John District.

Men's, Boys' and Children's Clothing, Province of Quebec (Amendment).

Bakers and Hairdressers, St. Hyacinthe (Amendment).

Building Trades, Montreal (Amendment).

Industrial Standards Act of Ontario

The following schedules have recently been made binding by Orders in Council and the terms summarized in the article beginning on page 106 of this issue:—

Barbering Trade, Windsor.

Electrical Repair and Construction Trade, London.

Plumbing and Heating Trade, London.

COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC
Agreements Recently Made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act include the extension by Order in Council of an agreement affecting building trades at Chicoutimi and the Lake St. John district and amendments to the agreements affecting barbers at St. Hyacinthe, building trades at Montreal and men's clothing workers throughout the Province, which agreement and amendments are summarized below. In addition, a request for the extension of a new agreement affecting apprentices in the building trades at Montreal was published in the *Quebec Official Gazette*, December 26, and requests for amendments to the agreement affecting building trades at Joliette and the furniture industry throughout the Province in the issue of December 12.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the LABOUR GAZETTE, May, 1934, page 417, and amendments to the Act were summarized in the issues of June, 1935, page 526, July, 1936, page 607, and December, page 1127. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette*, and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of

the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the LABOUR GAZETTE beginning in the issue of June, 1934. Beginning with the issue of the LABOUR GAZETTE for July, 1935, the terms of agreements have been summarized instead of being printed in full.

BUILDING TRADES, CHICOUTIMI AND LAKE ST. JOHN DISTRICT.—An Order in Council approved December 18, and published in the *Quebec Official Gazette,* December 26, makes obligatory the terms of an agreement between Le Conseil des Métiers de la Construction des Syndicats Catholiques et Nationaux du district de Chicoutimi (The Building Trades Council of the National Catholic Unions of the district of Chicoutimi), Le Conseil de Construction des Syndicats Catholiques Nationaux de Jonquière (The Building Trades Council of the National Catholic Unions of Jonquière), Les Syndicats Nationaux Catholiques de la Construction de Saint Joseph d'Alma (The National Catholic Unions of Building Trades of St. Joseph d'Alma) and L'Association des Constructeurs Saguenay-Lac Saint Jean Incorporée (The Association of Builders of Saguenay and Lake St. John, Incorporated).

The Order in Council is in effect from December 7, 1936, to December 6, 1937, and shall be automatically renewed unless one of the contracting parties has notified the other party 30 days before its expiration of their intention of repealing it.

The territorial jurisdiction includes the Counties of Chicoutimi, Charlevoix, Lake Saint John, Roberval and Saguenay.

Hours: 8 per day, 48 per week.

Overtime: time and one-half; work on Sundays and nine specified holidays, double time. In the County of Saguenay, however, overtime work shall be paid at the regular rate providing it does not exceed 2 hours a day.

Wages per hour for all work in Zone I (the municipalities of Chicoutimi, Jonquière, Kenogami, St. Joseph d'Alma, La Rivière du Moulin, Ville Racine, Ile Maligne, River Bend, Arvida, Bagotville, Port Alfred, Grande Baie, Desbiens Mills and within two miles of their limits and for contracts of $10,000 or more in the rest of the territorial jurisdiction except the County of Saguenay): bricklayers, mason and plasterers, 70 cents, blacksmiths (drill sharpener operators), 70 cents, blacksmiths on ordinary construction, 50 cents, shovel enginemen (steam, gas, electric, crude oil), 75 cents; hoisting enginemen (steam, gas, electric, crude oil)—for one drum, 50 cents, for two drums, 55 cents, for three drums, 60 cents, for four drums, 70 cents; stationary enginemen (repair and maintenance), 50 cents; enginemen—pumps of all kinds, 50 cents; enginemen-compressors, mixers of all kinds, 45 cents; steam shovel firemen, 50 cents, stokers, 45 cents, firemen-watchmen, 40 cents; carpenters and joiners, floormakers, cement finishers, marble setters, drillers, painters and paperhangers, 50 cents; painters working at a height of more than 45 feet and decorators, gilders, 60 cents; granite cutters, roofers (slate, tile, composition, asbestos), plumbers, steamfitters, electricians, riggers, ornamental iron workers, joint pointers, carters (one horse), 50 cents; tile setters and terrazzo setters, 55 cents; carters (two horses), 65 cents; lathers (wood or metal), 45 cents; helpers, 40 cents; powder men, 60 cents; truck drivers, 40 cents; common labourers and drivers (one or two horses), 35 cents.

The agreement does not cover plumbing work, steamfitting work, roofing work and installations of less than $300 in the municipalities of Chicoutimi and Rivière du Moulin.

Wages for foremen, 10 cents per hour more than the minimum wage for workmen if the number of men under their direction does not exceed ten; if more than ten men, the foreman must be paid 20 cents per hour over workmen's rate.

In Zone II (the rest of the territorial jurisdiction of the counties of Roberval, Chicoutimi, Lake St. John and Charlevoix), the wage rates are 15 cents per hour less than in Zone I for bricklayers, masons, plasterers, hoisting enginemen for four drums and steam shovel firemen, 5 cents per hour less than in Zone I for common labourers, marble setters, watchmen, firemen, granite cutters, truck drivers and drivers (one or two horses), 5 cents per hour more than in Zone I for shovel enginemen, 10 cents per hour less for all other trades listed in Zone I.

In Zone III (County of Saguenay) for work on contracts of $5,000 or more, the following hourly scale applies: bricklayers and masons, 70 cents; enginemen—steam and gas shovel, 65 cents to $1, compressor operators, 40 to 45 cents, enginemen—gas, 35 to 45 cents, stationary enginemen, 30 to 35 cents, hoisting enginemen, 55 cents, electricians, 50 to 60 cents, blacksmiths, 45 to 55 cents; carpenters and joiners (finishing work) and cement finishers, 45 to 50 cents; plumbers and steamfitters and painters, 40 to 50 cents; carpenters and joiners (preparation work and concrete forms), 40 to 45 cents, riggers, 40 cents; carters (two horses), 50 cents; carters (one horse), 40 cents, drivers, 30 cents, truck drivers, 35 cents, powdermen, 40 cents, drillers, 35 cents, semi-skilled labourers and mechanics' helpers, 30 to 35 cents, labourers, 30 cents.

Contracts of a total cost of over $5,000, clearing operations, including the cutting and the scouring of wood and road building are governed by the provisions of this Order in Council.

The number of apprentices shall not exceed one to every five journeymen for all trades requiring an apprenticeship.

Wages per hour for apprentices: first year—15 cents, second year, 25 cents, third year, 35 cents; in the municipalities of Zone II, 5 cents per hour less.

Employers to pay travelling and board expenses of workmen sent outside their localities to work.

Permanent maintenance men employed in public buildings or in an industrial or commercial establishment to be paid a minimum of $18 per week for qualified workmen and $13 for common labourers in Zone I, and $15 per week for qualified workmen and $12 for common laboures in Zone II, with a 48-hour week. If such employees room or board in the establishment, they may be charged a maximum of $2 per room per month and 20 cents per meal.

MEN'S, BOYS' AND CHILDREN'S CLOTHING INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council approved December 18, and published in the *Quebec Official Gazette*, December 26, amends the previous Orders in Council for this industry (LABOUR GAZETTE, March, 1935, page 238, April, page 323, August, page 733, November, page 1064, February, 1936, page 200, March, page 275 and July, page 660).

The classes of workers in the coats, pants and vests department are revised and the wage rates increased to the rates shown below. In these three departments, class AA consists of skilled cutters in all three departments; class A, of head operators and shape sewers on unbasted coats in the coat department and pocket makers and tape sewers in the vest department; class BB, of pocket makers and skilled trimmers in the coat department, back and front pocket makers, trimmers and seamers in the pants department and skilled trimmers in the vest department; class B, of fitters and offpressers in the coat department, leg pressers in the pants department, offpressers and second operators in the vest department; class C, of edge basters, second basters, shapers and top collar makers in the coat department and lining stitchers in the pants department; class D, of examiners, joiners (second operators), lining makers and pocket tackers in the coat department, lining sewers and top pressers in the pants department, fitters in the vest department; class EE, of steam machine pressers and underpressers in the coat department and general underpressers in the vest department; class E, of choppers, lining basters, machine edge basters and undercollar basters in the coat department, pocket makers and outside seamers on boys' shorts and bloomers and juvenile pants, lining sewers and attachers on boys' shorts and bloomers and juvenile pants in the pants department; class FF, of underpressers in the pants department; class F, of armhole basters, buttonhole makers, lapel makers, sleeve makers in the coat department, buttonhole makers, fitters, inside seamers on boys' shorts and bloomers and juvenile pants and trimming makers in the pants department, buttonhole makers, head basters, lining makers and vee sewers in the vest department; class G, of bottom of collar and leaf of collar fellers, button sewers, canvas basters, canvas makers, coat finishers, general hands, inside coat tackers in the coat department, button sewers, examiners, finishers, fly makers, loop makers, pocket sergers and tackers in the pants department, brushers, button sewers, examiners, finishers, general hands, ticket sewers in the vest department; class H, of buttonhole tackers, fellers of bottom sleeve linings, pocket closers, sleeve lining tackers, ticket pocket makers, apprentice cutters and trimmers in the coat department, buttonhole tackers and cleaners in the pants department and buttonhole tackers and cleaners in the vest department; class K, of basting pullers (male).

Where piece work rates are in effect, the following increases on the rates in force on October 1, 1936, are to apply: 5 per cent for classes A, B, C and D, 10 per cent for classes E, F, G and for offpressers, fitters and choppers, 15 per cent for seam and steam pressers. Manufacturers who employ contractors are to increase the prices paid to said contractors in accordance with the aforementioned increases.

These wage rates to be effective from January 1, 1937, throughout the Province except in establishments which had agreements with the Amalgamated Clothing Workers' Union on or before November 1, 1936, in which establishments the above-mentioned rates and conditions became effective November 1, 1936.

In the manufacture of infants' and children's clothing up to the age of 6 years, not exceeding size 24, as well as sportswear, and for girls' clothing up to the age of 14 years, providing such clothing is manufactured entirely by the same method and manner of production as that used in the men's and boys' clothing industry and is not made by a manufacturer, contractor or jobber principally engaged in the cloak and suit industry, hours are 44 per week with a 5-day week in Zone I and 48 per week with a 5½ day week in Zones II and III, with overtime at time and one-quarter.

BARBERS AND HAIRDRESSERS, ST. HYACINTHE.—An Order in Council, approved December 18 and published in the *Quebec Official Gazette*, December 26, amends the previous Orders in Council for these trades (LABOUR GAZETTE, July, 1935, page 631, October, page 954, and March, 1936, page 275).

The territorial jurisdiction is extended to include the town of Sorel and within a radius of 2 miles of its limits.

Certain changes are made in the arrangement of hours but the maximum week's work remains at 59 hours per week.

For the town of Sorel and within 2 miles of its limits the minimum wage rate is $12 per week for male barbers and hairdressers and $8 for female ladies' hairdressers.

The hourly rate for extra employees is omitted.

The schedule of wages by the job is revised to include rates for Sorel.

BUILDING TRADES, MONTREAL.—An Order in Council, approved December 18 and published in the *Quebec Official Gazette*, December 26, amends the previous Order in Council for these trades (LABOUR GAZETTE, May, page 460, and October, page 954) by cancelling the provision which exempted from the provisions of the agreement maintenance men employed in hotels and manufacturing establishments.

The December issue of the *Monthly Labour Review*, published by the United States Department of Labour, contains an article entitled "Lump-sum Settlements in Workmen's Compensation in New York." As pointed out in the review, this form of settlement has not proved satisfactory according to recent investigations conducted in New York State. Lump-sum settlement is generally made in cases of head and back injuries, and it has been believed that giving the claimant the full sum due him would act as a curative device. The investigation in New York State, however, found that in practice the curative benefits were slight, and that, in most cases, instalment payments would have been much more helpful to the recipients.

According to a "Report on the Hat and Cap Industry in Canada, 1935," issued by the Dominion Bureau of Statistics, considerable improvement was shown by that industry during 1935. Capital investment rose from $5,812,476 in 1934 to $6,451,000, a gain of about 11 per cent, while the gross value of production increased from $10,845,759 to $11,524,478, a gain of over 6 per cent. Employment was given to 4,211 persons as compared with 3,957 in 1934, an increase of 254 or approximately 6·4 per cent, and the remuneration paid these employees increased from $3,331,879 to $3,659,281 or more than 9 per cent. There was an increase in the cost of the materials used which rose from $5,188,631 to $5,549,013, an increase of more than 6 per cent.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedules of Wages and Hours Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force for a period not exceeding twelve months and thereupon such schedule shall be binding upon every employee or employer in such industry in such zone or zones to which the schedule applies, the schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the LABOUR GAZETTE, summaries are given in this article of the schedules which have thus been approved.

BARBERING TRADE, WINDSOR.—An Order in Council, dated December 10, and published in *The Ontario Gazette*, December 19, makes binding the terms of a schedule governing the barbering trade in the city of Windsor.

The Order in Council is in effect from December 29, 1936 "during pleasure."

Work may be performed on any day except Sundays, Wednesday after 12 o'clock noon and eight specified holidays, providing that work may be done after noon on Wednesday in any week in which one of the eight specified holidays occurs.

Class A consists of persons regularly employed on a percentage basis by a master barber, class B of master barbers who personally perform work at the trade and any person who carries on a business in a one-chair establishment or who operates a barber chair in any shop as a separate unit. For these classes A and B, the minimum rate of wages is "such percentage of the earnings of the barber or chair operated by him as will ensure to the barber a minimum wage equivalent to what he would have received for the same work if he had been employed pursuant to an arrangement whereby he would receive 60 per cent of the amount taken in at the following shop prices: haircut (adults), 40 cents; hair cut (children), shave, singe, hair tonics, 25 cents; shampoo (plain), facial massage (plain), 35 cents; razor honing, 40 cents.

Class C consists of persons who are regularly employed at the trade and the minimum wage rate is $20 per week.

Class D consists of persons who are not regularly employed at the trade and for these the minimum rate is $3 per day except when they are employed only on Saturdays or the day preceding a holiday, in which case they shall be paid $5 per day. If engaged for less than one day, 60 cents per hour with at least 3 hours' pay.

No deduction from wages to be made for materials supplied, laundry service or operating expenses of any kind.

Apprentices to be governed by the Ontario Apprenticeship Act.

ELECTRICAL REPAIR AND CONSTRUCTION TRADE, LONDON.—An Order in Council, dated December 21 and published in *The Ontario Gazette*, December 26, makes binding the terms of a schedule governing the electrical repair and construction trade in a zone which includes the City of London and surrounding district which is defined in the Order in Council.

The Order in Council is in effect from January 5, 1937, "during pleasure."

The schedule covers construction of new buildings or structures or parts thereof or the alteration or remodelling of existing buildings or structures or parts thereof. It does not include employees of industrial or manufacturing establishments who are engaged in manufacturing processes nor regular employees of such establishments who are engaged in the repair, servicing or upkeep of the plant and equipment used in the operation of the plant, or who are engaged in work in connection with new installations, alterations, or extensions of a minor nature in or to the plant or its equipment, nor to the repairing or servicing of electrical machines or appliances when the work is done in commercial establishments or when done by regular employees of manufacturers or their agents pursuant to the terms of a guarantee or contract accompanying the sale or installation of such machines or appliances.

Hours: 8 per day (between 8 a.m. and 5 p.m. where one hour is given for lunch or between 8 a.m. and 4.30 p.m. where one-half hour is given for lunch) from Monday to Friday inclusive, 4 on Saturday from 8 a.m. to noon, a 44 hour week. Whenever work is of such a nature that it cannot be done during a regular working day, it may be done at night at the regular wage rate for 8 hours. Whenever work is done on shifts, any 8 hours to be considered a regular days work, but for those working on the night shifts 91 cents per hour to be paid.

Overtime, including work on Saturday afternoons, Sundays and eight specified holidays, double time.

Minimum wage rate: 80 cents per hour. A special minimum rate may be established by the Advisory Board for any handicapped person.

Apprentices to be governed by the Ontario Apprenticeship Act.

PLUMBING AND HEATING TRADES, LONDON.—An Order in Council, dated December 21 and published in *The Ontario Gazette,* December 26, makes binding the terms of a schedule governing the plumbing and heating trades in a Zone which includes the City of London and the surrounding district which is included in the Order in Council.

The Order in Council is in effect from January 5, 1937, "during pleasure."

The schedule does not include employees of industrial or manufacturing plants who are engaged in manufacturing processes nor to employees of such plants engaged in the repair, servicing or upkeep of its equipment or in new installations or extensions of a minor nature in or to such plant.

Hours: 8 per day (between 8 a.m. and 5 p.m. whenever one hour is given for lunch or between 8 a.m. and 4.30 p.m. whenever one-half hour is given for lunch) from Monday to Friday inclusive, a 40-hour week. Work may be done on Saturday morning at the regular wage rate if required for the protection of life or property and the setting of sleeves and inserts. Whenever work is done in shifts, those on the night shifts to be required to work only 7 hours and they will be paid 91 cents per hour.

Overtime worked between 1 a.m. Monday and noon on Saturday, time and one-half. All other overtime including work on Saturday afternoon, Sundays and eight specified holidays, double time.

Minimum wage rate: 80 cents per hour.

Apprentices to be governed by the Ontario Apprenticeship Act. Whenever this Act does not govern the employment of fifth year junior mechanics they shall be subject to this schedule except that the minimum rate of wages shall be two-thirds of the regular rate.

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1936

Cost of Living, Prices of Staple Articles and Index Numbers

The movement in prices continued upward, a slight increase being recorded in the cost of the weekly family budget and a substantial increase in the Dominion Bureau of Statistics index number of wholesale prices.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.36 at the beginning of December as compared with $8.32 the previous month. Price changes during the month were not large, the most important being advances in eggs, butter, bread, beans and potatoes, and declines in beef, pork, bacon, and evaporated apples. The cost of the food budget for certain earlier dates was $8.14 for December, 1935; $7.54 for December, 1934; $6.67 for March, 1933 (the low point in recent years); and $11.83 for December, 1929. Including the cost of fuel and rent with that of foods the total budget was $16.99 at the beginning of December; $16.96 for November; $16.65 for December, 1935; $16.02 for December, 1934; $15.41 for June, 1933 (the low point in recent years), $22.11 for December, 1929; $21.49 for December, 1921; $26.92 for July, 1920 (the post war peak); and $14.26 for December, 1914. In fuel, changes were slight, advances in the cost of coal being offset by declines in wood. No changes were reported in rent.

In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 advanced week by week during December from 77·2 for the week ended November 27 to 80·8 for that ended January 1, 1937, a total advance of nearly 5 per cent. The latest figures available on a monthly basis are for November, when the index number was 77·2 as compared with 72·7 for December, 1935; 71·1 for December, 1934; 63·5 for February, 1933 (the low point in recent years); 96·0 for December, 1929; 96·4 for December, 1921; 164·3 for May, 1920 (the post war peak); and 66·4 for December, 1914. Grain prices were substantially higher during the month under review, particularly wheat which was quoted at the highest price since January, 1930. Important advances also occurred in the prices of certain non-ferrous metals, chiefly copper, lead and zinc. Iron and steel prices, which had shown stability over a long period, advanced considerably in December. The vegetable products group advanced 28 per cent during the year 1936, wood products 5·8 per cent, iron and its products 4·9 per cent and non-ferrous metals 17·8 per cent. Other groups in the chief component materials classification were only slightly higher.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

†December only. §Kind most sold.
††An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.

be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite. i. Including conveniences. r. Mining company houses in district $5–$10 per month; others, five and six rooms, $10–$35. s. Delivered

(Continued from page 109)

prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1936*

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent 18½%; Clothing, 18½%; Sundries, 20%.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Meat prices in the average continued the gradual downward movement in progress during recent months. In beef, sirloin steak declined from an average price of 22·7 cents per pound in November to 22·1 cents in December, while fresh roast of pork was down from 21·2 cents per pound to 20·4 cents and breakfast bacon from 30 cents per pound to 29·2 cents. Egg prices were generally higher, increases being larger in the prairie provinces and in the maritimes than in other provinces. The Dominion average price for the fresh grades was 45·7 cents per dozen in December and 43·9 cents in November. Butter prices were higher in most cities, the Dominion average for creamery being up 1 cent per pound to 29·4 cents. Increases in the price of bread were reported from several cities and the Dominion average was fractionally higher at 6·6 cents per pound. Canned tomatoes have moved gradually higher month by month since early summer, the average price being 12·7 cents per tin in December and 11·1 cents in May. Dry beans rose from 6·4 cents per pound in November to 6·8 cents in December.

Potato prices averaged 5 cents per ninety pounds higher at $1.50, the largest increases being reported from Quebec and the maritime provinces, where prices are still lower than in other provinces. Evaporated apples were down from an average price of 17·1 cents per pound in November to 16·2 cents in December. Anthracite coal was again slightly higher averaging $14.78 per ton.

Following are the prices reported for Welsh coal, "cobbles" and "French nut"—Halifax, $15.50; Charlottetown, $12.90; Moncton, $15.50; Saint John, $14; Quebec, $13; Three Rivers, $15 and $14 Sherbrooke, $15 and $15.50; St. Hyacinthe, $13.50; Montreal, $13.25 and $13.50; Otawa, $15.25; Kingston, $14.50; Belleville, $15 Peterborough, $15.75; Oshawa, $14.75; Toronto, $14.50 and $14; St. Catharines, $15; Hamilton, $14.50; Brantford, $16.50; Galt, $16; St. Thomas, $16; Cobalt, $18; Timmins, $18; Port Arthur, $17.25; Fort William, $17.25; Winnipeg, $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

The following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1936," which is a Supplement to this issue of the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930 = 100, was 98·3 for November, an advance of 0·7 per cent for the month. All industrial materials and manufacturing groups advanced, while the food and tobacco groups declined. The most notable advances were in wool which rose 9·3 per cent and non-ferrous metals which rose 7·7 per cent.

The *Statist* index number, on the base 1867-1877 = 100, was 94·2 at the end of November, an increase of 3·1 per cent for the month. Foodstuffs on the whole were unchanged, but all three of the industrial materials groups recorded substantial advances.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914 = 100, was 151 at the first of December, showing no change from the previous month in any of the component groups.

France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base 1914 = 100 (gold index) was 67 for November, an advance of 4·7 per cent for the month. Every one of the six groups showed increases over the previous month.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 104·4 for November, an increase of 0·1 per cent for the month. The most notable changes were increases of 9·3 per cent in rubber and 7·2 per cent in non-ferrous metals.

COST OF LIVING.—The official index number, on the base 1913 = 100, was 124·3 for November, a decrease of 0·1 per cent for the month due to lower food prices.

United States

WHOLESALE PRICES.—*Bradstreet's* index number (continued by Dun and Bradstreet, Incorporated) which is based on the sum total of the prices per pound of 96 commodities of common consumption was $10·7895 at December 1, an advance of 5·6 per cent for the month. Of the 13 groups, eleven advanced, one (coal and coke) was unchanged, and one (chemicals and drugs) showed a decline.

Dun's index number, which is based on the cost *per capita* of a year's supply of commodities, was $192·959 at December 1, a rise of 4·6 per cent for the month. This is the highest point reached since March, 1929. Each one of the seven groups contributed to the general advance.

COST OF LIVING.—The National Industrial Conference Board index number on the base 1923 = 100, was 85·8 for November, an increase of 0·1 per cent for the month. Food prices were lower, but all other groups showed some advance over the October level.

Injuries resulting from industrial accidents in the iron and steel industry decreased in 1935 as compared with 1934, according to an article in the December issue of the *Monthly Labour Review*. The frequency rate declined from 19·42 to 17·14 per million man-hours, and the severity rate declined from 2·42 to 2·11 per thousand man-hours, although the total man-hours worked increased by 17 per cent. The effectiveness of safety work is indicated by the experience of a select group of establishments with a frequency rate of about one-third that of the entire group.

DOMINION AND PROVINCIAL LABOUR DEPARTMENTS, BOARDS, COMMISSIONS, ETC., IN CANADA

Dominion

Department of Labour, Confederation Building, Ottawa, Canada:
Minister, Hon. Norman McL. Rogers, M.A., B.Litt., B.C.L.
Deputy Minister, W. M. Dickson.
Assistant Deputy Minister, Gerald H. Brown.
Registrar of Boards of Conciliation and Investigation under the Industrial Disputes Investigation Act, W. M. Dickson.
Chief Conciliation Officer, M. S. Campbell.
Director of Employment Service of Canada, R. A. Rigg.
Superintendent, Canadian Government Annuities, E. G. Blackadar.
Registrar, Combines Investigation Act, F. A. McGregor.
Associate Editor of the LABOUR GAZETTE, H. J. Walker.
Chief of Statistical Branch, C. W. Bolton.
Labour Intelligence Branch, D. J. Sutherland.
Library and Research Branch, Miss M. Mackintosh.
Dominion Commissioner of Unemployment Relief, Harry Hereford.

National Employment Commission:
Chairman: Arthur B. Purvis.
Commissioners: Tom Moore,
W. A. Mackintosh,
A. N. McLean,
E. J. Young,
A. Marois,
Mrs. M. M. Sutherland.
Secretary: H. Spencer Relph.
Consultant Co-ordination of Aid: Miss C. Whitton, O.B.E.
Director of Publicity: Ray Brown, O.B.E.
Director of Registration: V. C. Phelan.

Provincial

Alberta

Department of Trade and Industry, Edmonton, Alta.:
Minister, Hon. E. C. Manning.
Deputy Minister, W. D. King.

Board of Industrial Relations:
(Administered by the Department of Trade and Industry.)
Chairman: Clayton Adams.
W. D. King, Deputy Minister of Trade and Industry.
Dr. V. W. Wright, Chairman of Workmen's Compensation Board.
Industrial Standards Officer: J. O. Jones.
Registrar of Boards of Conciliation and Investigation under the Labour Disputes Act: Clayton Adams.

Tradesmen's Qualification Act:
(Administered by the Department of Trade and Industry.)
Chairman of Board of Examiners: R. J. Gaunt.

Workmen's Compensation Board:
Chairman: Dr. V. W. Wright.
Secretary: Frederick D. Noble.
Chief Boiler Inspector: A. Bradshaw.
Chief Factory Inspector: H. M. Bishop.

Old Age Pensions:
(Administered by Workmen's Compensation Board.)
Superintendent: A. Blackie.

Mothers' Allowances:
(Administered by Workmen's Compensation Board.)
Superintendent: T. R. Blain.

Employment Service Offices:
(Administered by Department of Health.)
General Superintendent: M. W. Robertson.

Unemployment Relief:
(Administered by Department of Health.)
Chairman of Unemployment Relief Commission: A. A. MacKenzie.

Coal Mines Act:
(Administered by Department of Lands and Mines.)
Chief Inspector: A. A. Miller.

The Theatres Act:
(Administered by Provincial Secretary.)
Chief Inspector: G. P. Barber.

British Columbia

Department of Labour, Victoria:
Minister, Honourable George S. Pearson.
Deputy Minister, Adam Bell.
Assistant Deputy Minister, Robert Morrison.
Chief Factories' Inspector, H. Douglas, Vancouver.
General Superintendent of Employment Service, J. H. McVety, Vancouver.

Board of Industrial Relations:
Adam Bell, Chairman.
Mrs. Rex Eaton.
Dr. W. A. Carrothers.
James Thompson.
C. J. McDowell.
Miss Mable A. Cameron, Secretary.

Workmen's Compensation Board:
E. S. H. Winn, K.C., Chairman.
Parker Williams.
J. H. Pillsbury.
F. P. Archibald, Secretary.
Address of Board: 411 Dunsmuir Street, Vancouver.

Old Age Pensions Branch:
(Administered by the Workmen's Compensation Board.)
H. L. Greenwood, Secretary.

Unemployment Relief:
Administrator, E. W. Griffith, Unemployment Relief Branch, Department of Labour, Victoria.

Inspector of Apprenticeship:
Hamilton Crisford, Stock Exchange Building, Vancouver.

Economic Council:
Dr. W. A. Carrothers, Chairman.

Manitoba

Department of Labour, Winnipeg:
Minister of Public Works and Labour, Hon. W. R. Clubb.
Deputy Minister of Labour, A. MacNamara.
Chief Inspector, R. A. Stewart.

Employment Service Offices:
J. Neish, General Superintendent.

Fair Wages Board:
A. MacNamara (Deputy Minister of Labour and Asst. Deputy Minister of Public Works), Chairman.
E. Claydon, Sr.
C. J. Harding.
Thos. J. Williams.
F. Fraser.

Bureau of Labour (sub-department):
Secretary, Edward McGrath.

Elevator and Hoist Board:
E. McGrath, Chairman.
A. Steventon.
W. J. Easterbrook.

PRICES IN CANADA AND OTHER COUNTRIES DURING 1936*

Wholesale prices in most countries were at higher levels at the end of the year than at the end of 1935, there being advances during the last half of the year following a period of relative stability or in some cases slight declines in the earlier months. The recovery in prices commenced in 1933 in nearly all countries except those whose currencies were still on the gold basis. In the latter the downward movement continued until 1935 when there was some advance which became more pronounced following devaluation in 1936. The upward movement in most cases was due in the main to higher prices of grains, non-ferrous metals and other primary products. The cost of living was irregularly higher in many of the principal countries during the year continuing the upward movement which commenced in 1933, the advances being due in large part to the higher cost of foods.

The Movement of Retail Prices and Cost of Living in Canada during 1936

Table I brings down to the end of 1936 the index number of changes in the cost of living in Canada, based on prices in 1913 as 100, and shows the percentage changes in the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

The movement of this index was within narrow limits during 1936, the high point reached in December being only 3·2 per cent above the low reached in the spring and 1·5 per cent above December, 1935. The food group was again the chief factor in the movement of the index though there were slight seasonal changes in the fuel and clothing groups and an advance in rent in the spring and again in the autumn. Since the recovery in prices began in the summer of 1933 the index number of the cost of living has risen 7·5 per cent, here, also, influenced mainly by the movement in foods and to a considerable extent by clothing and rent. In spite of this increase it was at the end of the year 19 per cent below the level of December, 1929, the figures being 129 and 160 respectively.

The movement in the food group was to a large extent seasonal, the index declining from 111 in December, 1935, to 106 in May and June, 1936, and then rising to 114 by the end of the year, an increase as compared with the end of 1935 of 2·7 per cent. Most of the items changed little, declines being somewhat more numerous than advances though the latter exerted greater influence on the index than the former. The most important increases were in the prices of bread, flour and cheese during the later months of the year, and in two commodities usually subject to wide seasonal variations, namely eggs and potatoes. Between March, 1933, the low point in many years for the group, and December, 1936, foods rose 25 per cent. On the latter date the index was, however, 29 per cent below the figure for December, 1929.

In the fuel and light group the movement during 1936 was slight, such as occurred being due almost entirely to the usual seasonal changes in the price of United States anthracite coal. This group has remained at approximately the same level since 1933, being about 10 per cent below that of 1929.

Rent for workingmen's houses advanced slightly during 1936, continuing the movement which commenced in the autumn of 1934, the low point for the group having been in the summer of that year. The advance from the low point down to the end of 1936 was 5·5 per cent.

Clothing declined slightly in the spring and advanced in the autumn as in recent years. The level at the end of the year was about two per cent higher than at the beginning. From the low point of 107, reached in the summer of 1933, the index for the group advanced to 117 at the end of 1936, or 9 per cent, but it was still about 25 per cent below pre-depression levels.

*The Dominion Bureau of Statistics issues reports on prices with comprehensive figures, as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada): quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and other countries).

* The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

Tables II and IV show the cost of a weekly family budget of foods, fuel and lighting, and rent in terms of the average prices for the Dominion and by groups for each province.

Retail prices for meats showed relatively little movement during the year, remaining at about the levels prevailing during the last few months of 1935. In beef, sirloin steak averaged 23·1 cents per pound for the year, the same as for 1935, as compared with the pre-depression level of 36·3 cents in 1929. Fresh leg roast of pork was at the low price for the year in December at 20·4 cents per pound as compared with the high of 22·4 cents in August. The yearly average price was 21·4 cents per pound in 1936 and 21·2 cents in 1935, as compared with 12·1 cents in March, 1933 (the low point) and a yearly average for 1929 of 30 cents per pound. Wholesale prices for beef and pork were lower during most of 1936 than in 1935, factors in this being the considerably greater movement of live stock off the farms in the former year than in 1935 and the substantial increase in the figures as to slaughterings of cattle and hogs, as well as improvement in export movement of live stock, beef and bacon. Lard was about 2 cents per pound lower at the end of the year than at the beginning, the price in December being 15·9 cents per pound as compared with a low price in recent years of 11·3 cents in July, 1932.

Egg prices were higher month by month during 1936 than in the previous year. The average price for the fresh grades was 33·8 cents per dozen as compared with 31·2 cents in 1935. Stocks in cold storage were about the same throughout the year as in 1935. The production of creamery butter during the year was the greatest on record, being about 4 per cent more than in 1935. The retail price showed the usual seasonal movement but was about the same at the end of the year as at the beginning and little changed month by month from 1935. The average for the year was 28·3 cents per pound as compared with 27·3 cents in 1935, 25·5 cents in 1933 and 47 cents in 1929.

The price of cheese has shown little recovery during the last five years, except for the closing months of 1936 when the price advanced about 2 cents per pound. The average price for the year was 21·1 cents per pound as compared with 20·4 cents in 1935 and 33·4 cents in 1929.

The price of flour, reflecting the continued improvement in wheat prices, was at the end of the year at the highest level reached since the end of 1930 but still much below 1929 levels. Some comparative figures are: 3·9 cents per pound in December, 1936, 2·6 cents at the beginning of 1933 (the low point) and 5·3 cents in December, 1929. Higher prices for bread were reported from many cities during the year, the average price per pound being up from 6·2 cents in January to 6·6 cents in December.

The yield of potatoes in 1936 was estimated to be about the same as in 1935 and much lower than in 1934. An improved export demand developed from the United States, the 1936 crop there being considerably smaller than in 1935. Prices in Canada during 1936 were higher than for some years, comparative figures being $1.50 per ninety pounds in December, 1936, $1.21 in December, 1935, and 72 cents in December, 1934.

United States anthracite coal declined from an average price of $14.90 per ton in January, 1936, to $14.43 during the summer and then advanced in the autumn to $14.78 in December.

Wholesale Prices in Canada, 1936

The accompanying tables, V, VI and VII, show the index numbers of wholesale prices in Canada calculated by the Dominion Bureau of Statistics, the commodities being arranged according to "chief component materials" in table V, "purpose" in table VI and "origin" in table VII.

This index number moved to substantially higher levels during the last half of 1936, following a moderate decline from the beginning of the year. In December the index number was 9½ per cent higher than at the end of 1935 and 25 per cent higher than at the lowest level of recent years reached in 1933, but still 17 per cent below the figure for December, 1929. The feature of the movement during the year was the further improvement in the relative position in the price levels of primary as compared with manufactured products, with the result that at the end of 1936 the index numbers for "raw and partly manufactured goods," and "fully and chiefly manufactured goods" were at approximately the same level for the first time since early in 1930, though still much below the levels of that time. The index number for the former group was 79·3 in December, 1936 and for the latter 77·3, an advance since the end of 1935 of 18 per cent and 6 per cent respectively.

The index for consumers' goods advanced from 74·4 in December, 1935, to 76·9 in December, 1936, mainly because of advances in foods, chiefly milled products, milk and its products, vegetables, and bakery products. Producers' goods increased 16 per cent during the same period, the index for the group being up from 69·4 to 80·4. The principal advances were in materials for building and construction, as well as in materials for the furs and leather goods industries, for the metal working industries, for the milling and other industries and for miscellaneous producers' materials.

TABLE II.—COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING

The budget is intended to show the changes in the cost of items included not to show

‡‡ An allowance for the cost of clothing and sundries would increase the figures by about 50 per cent.
† Kind most sold since October 1922.

In the grouping according to chief component materials the Vegetable Products group showed much the greatest advance of any of the eight principal groups, being up 26 per cent at the end of the year as compared with December, 1935, owing chiefly to higher prices for grains, milled products, vegetables, tobacco, rubber and vegetable oils. Important increases occurred also in the Wood and Wood Products group, mainly because of advances in the prices of lumber; the Non-Ferrous Metals group, because of higher prices for copper, lead, zinc and tin; the Iron and its Products group, because of advances in prices of pig iron, rolling mill products and in scrap. The Animal and its Products group was only slightly higher, there being important declines in prices of live stock, meats and eggs, and increases in furs, hides, leather and milk and its products. The Textile Products group, the Non-Metallic Minerals group and the Chemical and Allied Products group were little changed.

Table III, on page 7, gives the wholesale prices of certain commodities on primary markets and is compiled from information in the monthly bulletins on "Prices and Price Indexes," issued by the Dominion Bureau of Statistics.

AND RENT IN TERMS OF THE AVERAGE RETAIL PRICES IN SIXTY-NINE CITIES IN CANADA

the minimum cost or the quantities of different foods required for an average family.

Prices in Great Britain and Other Countries

The accompanying tables numbered VIII to XXIII give index numbers of retail prices of foods and cost of living and of wholesale prices in several of the principal commercial and industrial countries for 1936 and for preceding dates to show the movements of prices in comparison with those in Canada. The information in the following tables is obtained for the most part from publications of the governmental or other authority compiling the index number, but in some cases from the Monthly Bulletin of Statistics of the League of Nations, Geneva, which bulletin publishes figures for many countries. The quarterly supplement to Prices and Price Indexes issued by the Dominion Bureau of Statistics, Ottawa, also contains index numbers for many countries.

Great Britain

Cost of Living.—The Ministry of Labour's index number (Table X), based on the prewar standard of living of a workingman's family (food expenditure weighted 60 per cent) declined during the early months of the year. Beginning in July, an upward movement appeared and the index for December 1 was 4·8 per cent higher than the June level. In this same period, food advanced 8 per cent. There was a slight increase in clothing prices early in the year and the higher level was maintained. The fuel and light, sundries and rent groups, however, showed little or no change during the year.

Wholesale Prices.—Following a rise in prices in the latter part of the year 1935 and in January 1936, prices on the whole showed little variation during the first five months of the year, according to the Board of Trade index number (Table XI). In July, a general advance began which extended to all of the eleven component groups. Comparing prices in December, 1936, with the same month in 1935, the general index number had advanced 10·2 per cent. All groups were included in the advance, cereals rising 28·6 per cent and wool 25·6 per cent.

France

Cost of Living.—The decline in the index number of the cost of living, Paris (Table XII), which began in 1931, continued until it reached its lowest point in this period in the third quarter of 1935. Since that time, each quarterly figure has shown an advance, the fourth quarter of 1936 being 12·9 per cent higher than for the same quarter in 1935.

Wholesale Prices.—The upward movement which began in August, 1935, continued throughout 1936, with the exception of slight recessions in two months (Table XIII). After the gold basis was disontinued in September, 1936, prices in terms of national currency increased considerably, but prices index numbers based on gold values (not included in this table) decreased in October, advancing again in November and December.

Germany

Cost of Living.—There was no marked trend in the cost of living during 1936 (Table XIV). The index number for November, 1936, was 1·1 per cent higher than for the same month in 1935. Fats and meats were upward. Clothing had increased 4·2 per cent in this period, while the other groups showed only slight variations.

Wholesale Prices.—Wholesale prices also showed little variation during the year 1936, advancing one per cent between November, 1935, and November, 1936 (Table XV). In this period, agricultural products declined slightly, while the other three main groups recorded small advances.

United States

Cost of Living.—Between October, 1935, and September, 1936, the Bureau of Labour Statistics index number (Table XXII) advanced 2·1 per cent. Except for a small decline in the fuel and light group, all groups were included in the upward movement during the year.

Wholesale Prices.—There was no marked trend in the movement of wholesale prices between October, 1935, and October, 1936 (Table XXIII). Between the lowest point for this period reached in May and the highest in August and September, there was a difference of 3·8 per cent.

Furniture	85
Carriages, wagons, truck bodies, etc	87
Crude, rolled and forged products	87
Foundry and machine shop products	89
Machinery	92
Automobiles	94
Automobile parts	94
Agricultural implements	95
Stoves, furnaces, etc	96
Electrical apparatus, etc	97
Electric batteries	98
Radio sets and parts	98
Sheet metal products	99
Shipbuilding	99
Leather (tanning)	101
Boots and shoes	102
Harness, leather belting, etc.	104
Fur goods	105
Rubber products	105
Tobacco and cigarettes	106
Cigars	107
XI. Lithographing, Photo-Engraving, Stereotyping and Electrotyping	108
Appendix A. Wages in Agriculture, 1929-1935	110
Appendix B. Numbers and Earnings of Steam Railway Employees in Canada, 1935	111
Appendix C. Numbers and Earnings of Coal Miners in Canada, 1921-1935	112
Appendix D. Weekly Earnings of Employees in Merchandising and Service Establishments in Canada, 1935	113
Appendix E. Wages and Hours of Labour under Provincial Legislation and on Federal Government Contracts in Canada	115

WAGES AND HOURS OF LABOUR IN CANADA

1929, 1935 and 1936*

THE present bulletin, the twentieth in the series on Wages and Hours of Labour, contains data for the years 1929, 1935 and 1936, but the tables on building, printing, metal trades and electric railways give figures for 1920, 1926, and 1930 to 1936, while the table on steam railways is for the years 1920 to 1936 inclusive. In the appendices information is given as to minimum wage rates and maximum hours of labour under provincial legislation, also as to the federal government fair wage policy, wages in agriculture in 1935 and certain previous years, average earnings of steam railway employees in recent years with numbers employed in 1935, average earnings of coal miners with numbers employed and days worked from 1921 to 1935 and also average earnings of employees in merchandising and service establishments in 1935.

The table of index numbers of rates of wages contains figures showing changes in a number of occupational groups, from 1901 to 1936, and for certain other groups from 1911 to 1936, the base year being 1913. Index numbers for other groups have not been calculated as figures back to 1913 have not been compiled and published.

Changes in Wages

The recovery in wages, which first appeared in logging and sawmilling and in common factory labour in 1934 and extended to all groups in 1935, continued during 1936, and the increases were again greatest in logging and sawmilling, nine per cent, but were appreciable in factory work, over two per cent, and on street railways one per cent, while in building, metal and printing trades the average increases were less. In coal mining and on steam railways wage rates were unchanged. In building trades the average increase was lessened by lower wage scales being agreed upon in certain

*The first report in this series was issued as a supplement to the LABOUR GAZETTE for March, 1921, and contained figures as to wages and hours of labour for certain trades in various cities in Canada from 1901 to 1920, with index numbers by groups based on wages in 1913 as 100. It also contained samples of wage rates for common labour in factories, miscellaneous factory trades in a small number of industries, and wages in lumbering from 1911 to 1920, with index numbers. Subsequent reports, in most cases issued as supplements to the LABOUR GAZETTE for January each year, brought these figures down to date with extensions from time to time to include additional industries and classes of labour.

The present report includes figures as to wages and hours in the manufacturing of silk yarns and fabrics, crude forged and rolled steel products, tobacco, cigarettes and cigars, industries not hitherto covered.

Certain of these reports, however, contained special features. Report No. 5 (1923) dealt with Hours of Labour in Canada and Other Countries. Report No. 3 (January, 1922) included an appendix with statistics of wages and hours in coal mining in Canada from 1900 to 1921 with index numbers for the three principal districts. Report No. 7 (January, 1925) included an appendix with figures for agriculture from 1914 to 1923. Report No. 11 (January, 1928) contained an appendix on wages of employees of steam railways, considerably increasing the information for the years since 1917 with a more extensive record from 1901 to 1927 and also a new series of index numbers. Each report from No. 7 (January, 1925), to No. 14 (January, 1931), contained data not only for the previous year but back to 1920, except that figures for 1922, 1923 and 1924, the years of least change, were omitted from some of the tables owing to lack of space. Report No. 15, issued in January, 1932, contained data for the years 1926, 1930 and 1931, with figures for 1920 also in some cases. Report No. 16, issued in January, 1933, afforded figures for 1930, 1931 and 1932 with figures for 1920 and 1926 also in some tables. Report No. 17, issued in January, 1934, contained data for 1929, 1932 and 1933 with figures for 1920, 1926 and 1930 to 1933 in some tables. For coal mining and steam railways wages for the years 1920 to 1933 were given. Report No. 18 issued in January, 1935, contained data for 1929, 1933 and 1934, with figures for 1920, 1926, and 1930 to 1934 in some tables. For steam railways wages for the years 1920 to 1934 were given. In this report, Table IX on common labour in factories was enlarged to include a greater number of cities and more samples for each, especially in the large cities. Report No. 19, issued in January, 1936, contained data for 1929, 1934 and 1935 and for some of the earlier years in some tables.

In Report No. 15 (January, 1932) the number of cities for which data were given in Table I as to building trades and electric railways was increased to approximately forty, and in the case of printing trades to fifteen, and these cities have since been covered in subsequent reports. Previously this table covered only thirteen cities, except that data for building trades in Windsor, Ont., were included, beginning with the report for 1928. Sheet metal workers employed in building and construction have been included with building trades since 1927, while sheet metal workers in factories have been included in the table on manufacturing industries. The section of the table on metal trades previously given was omitted from Reports Nos. 15 and 16 for 1931 and 1932 but figures for these trades appeared in the tables of sample rates of wages and hours in the sections of Table X on foundries and machine shops and other metal manufacturing industries. This section of Table No. I was, however, included in Report No. 17 with figures for 1920, 1926 and 1930 to 1933 and has been continued in subseqeuent reports. As in previous reports figures on wages for the metal trades in mines and on railways appear in the tables on those industries.

The appendix on wage rates under provincial minimum wage legislation, included in recent years beginning with Report No. 12, issued in January, 1929, was enlarged in Reports No. 18 and 19 to include also data as to wage rates in certain collective labour agreements enforceable under legislation in several of the provinces. The present report includes also a section on maximum hours of labour under provincial legislation,

29937—1½

trades and localities where there was little employment in the past few years. In manufacturing industries the greatest increases appeared in automobile plants, over eight per cent, but increases averaged four to five per cent in the manufacture of shirts, flour, meat products, furniture, automobile parts and accessories and fur goods. After September, the month for which most of the figures were obtained, wage increases were announced in a number of establishments in various industries, indicating that the upward movement in wages was being considerably accelerated.

For previous years it will be seen from the table of index numbers that by 1920 wages had reached levels almost one hundred per cent higher than in 1913, in some groups the increase being over one hundred per cent while for building and printing trades the increases were appreciably less, being only about eighty per cent. After 1920 all groups showed some decreases, although printing trades and coal mining reached the peak in 1921 instead of 1920, declining somewhat thereafter. The decreases in coal mining in 1925 were comparatively steep and tended to reduce the average for the six groups averaged for the period back to 1901. From 1925 to 1930 the movement was upward in each group.

In 1930 the index numbers for most of the groups were slightly higher but that for lumbering declined slightly. In 1931 all groups were downward except printing trades and coal mining. In 1932 and 1933 all groups were down, the greatest decreases being in lumbering and building trades

*Weighted according to average numbers of workers in each group in 1921 and 1931.
†Including some increases effected near the end of the year.
‡Including a ten per cent decrease for certain classes toward the end of the year.
(a) Seven trades from 1901 to 1920, eight from 1921 to 1926, nine for 1927 to 1936, 13 cities to 1927, 14 cities to 1930, thereafter 31 to 42 cities.
(b) Five trades from 1901 to 1926, four for 1927 to 1936.
(c) Two trades from 1901 to 1920, four for 1921 and 1922, six from 1923 to 1936.
(d) Two classes from 1901 to 1920, five classes 1921 to 1936.
(e) Twenty-three classes.
(f) Four classes 1901 to 1920, twelve classes 1921 to 1936.
(g) The number of samples (and industries) increased from time to time since 1920; machine operators, helpers, etc. also included.

In 1934 lumbering showed substantial increases, factory labour also advanced appreciably and coal mining slightly while the other groups were lower.

In 1935 all groups were appreciably upward.

Building Trades

In the building trades up to 1919 there were smaller increases than in any of the other groups, but in 1920 there were considerable increases. In 1921 decreases of 10 cents per hour were general and in 1922 decreases of 5 cents per hour were numerous. In 1923, 1924 and 1925, while there were upward movements in the average, it was due to increases in particular trades and in certain cities, and not to a general upward movement for most of the trades and localities. From 1926 to 1930, the upward movement was somewhat more general. During 1931 there were numerous decreases, in some localities the reduction being general while in others it was confined to certain trades. During 1932 and 1933 the decreases were general, averaging about ten per cent, while in 1934 there were decreases in some trades in certain cities but no general downward tendency appeared. In some cases there were increases so that the average decrease was about three per cent. In 1935, increases occurred chiefly in Quebec and Ontario, some of them due to agreements which established minimum wages under provincial legislation as outlined in Appendix E. In 1936 the upward movement continued with, however, decreases in certain trades in a few localities.

Metal Trades

In the metal trades the increase in wage rates from 1915 to 1918 was greater than in most of the other groups, there being a good demand for labour in the manufacture of munitions. During the industrial activity in 1919 and 1920 further increases were made, but in 1921 and 1922 considerable decreases occurred. In 1923 and 1924 some recovery was experienced, in 1925 there was practically no change, from 1926 to 1930 there were some slight changes upward, but during 1931 the changes were downward, while during 1932 and 1933 the decreases averaged five per cent and three per cent respectively. In 1934 there were comparatively few decreases, with some increases, so that the average was down less than one per cent. In 1935 wages recovered, being slightly higher than in 1934, and this slight recovery continued in 1936.

Printing Trades

In the printing trades up to 1920 increases were about the same as in the building trades, but in 1921 when many of the three or five-year agreements between employers and the unions expired, rates were advanced and hours were reduced in many cases. Increases appeared each year thereafter down to 1931. During 1932 decreases of ten per cent were general in the western provinces and were made in some cities in the east. In 1933 the decreases were general, averaging five per cent. In 1934, while there were further decreases, there were some increases, the average being down less than one per cent. In 1935 and 1936 there were a few increases.

Electric Railways

In electric railway service, rates had almost doubled by 1920, but declined slightly in 1921 and 1922, recovering somewhat in 1923 and very gradually each year thereafter until 1931 after which reductions occurred each year.

Since 1930, on many of these railways, with reduced traffic, operating costs were lowered to some extent by reducing hours per day, and therefore daily wages, instead of reducing hourly rates. In 1934 very few changes in wages were made so that the index number was practically unchanged. In 1935 and 1936 there were a few increases.

Steam Railways

In steam railway employment, wage increases were considerable in 1918, 1919 and 1920, but in 1921, decreases averaging about twelve per cent for all classes were made and in 1922 decreases for shop crafts, maintenance of way employees and for freight handlers, clerks, etc., were made, averaging about ten per cent. In 1926, at the end of the year, wages of conductors, trainmen, brakemen, baggagemen, and yardmen were advanced about 6 per cent, that is by half the amount of the reduction in 1921, and during 1927 similar increases were made in rates for other classes. In 1929, increases were secured by shop and maintenance of way employees and by certain classes of train crews on some lines. In 1931, while practically all classes were to a great extent on short time, changes in rates were not made until the end of the year when a ten per cent deduction from each employee's pay was made for train, engine and telegraph service employees from December first. In the early months of 1932 the same deduction was applied to other classes.

In 1933, earnings of employees in engine, train and telegraph services were subjected to a deduction of twenty per cent from May to October, inclusive, and fifteen per cent thereafter. The deduction for most of the other classes was increased to fifteen per cent in December.

Toward the end of 1934 amendments to the agreements between the railway companies and the employees provided that the general deduction of fifteen per cent would be changed to one of twelve per cent on January, 1935, and to ten per cent on May 1, 1935.

Coal Mining

In coal mining the index number reached its peak in 1921, increases having been made in the closing weeks of 1920. In 1922 decreases were made in Nova Scotia and Vancouver Island and in 1923 and 1924 slight decreases occurred in the latter. A substantial decrease occurred in Alberta and southeastern British Columbia in 1924. In 1925 decreases occurred in the three principal districts, being especially steep in Alberta and southeastern British Columbia. Slight increases, however, were provided for a number of classes in some of the mines in Alberta toward the end of the year. In 1926, reductions were effected in Nova Scotia but wages in the other fields were practically unchanged. Slight increases were made in some mines in Alberta in 1928. In Nova Scotia in February, 1930, rates for labourers were changed by increases of 5 cents to 15 cents per day and certain other datal classes were slightly increased. During 1931 rates of wages were steady but the industry suffered greatly from short time, that is, collieries were operated less than six days per week to a great extent. In 1932 in Nova Scotia rates were reduced ten per cent in March, except that a minimum of $3.25 per day was provided for in the principal mines. In the other districts rates were reduced only in a few of the smaller mines. In 1933, wages in the Drumheller district in Alberta were reduced more than ten per cent. In Nova Scotia, rates were unchanged in the principal mines but there were reductions of about fifteen per cent in certain mines of medium size. In 1934 partial restorations of these reductions were made in some Nova Scotia mines, while decreases occurred in New Brunswick.

The index number for 1901 to 1935 does not include New Brunswick, Saskatchewan and the Princeton district in British Columbia. The inclusion of these figures for 1934, when weighted according to numbers of miners employed, made no change in the result. In 1935, increases of about five per cent were made in Nova Scotia and in Alberta in the Drumheller and Edmonton districts. In 1936 wage scales were practically unchanged.

Factory Labour

Factory labour had shown almost the greatest percentage increases up to 1920, both for common labour and for the various trades, but steep decreases appeared from 1921 to 1923 after which the trend was upward until 1931 when a considerable number of decreases occurred. In 1932 decreases in rates were numerous and steep in some cases. There was, however, a pronounced tendency to reduce hours per week or per day or both, frequently on a short time basis, with relatively small reductions in hourly rates. In some cases, where hours per day were reduced more than daily wages, the hourly rate became higher. In 1933, rates were again generally downward but less steeply. In 1934 there were numerous increases in nearly all of the manufacturing industries but comparatively few decreases so that the index number rose by nearly three per cent. In 1935 the upward movement continued. In Ontario and Quebec this was due to some extent to agreements establishing minimum rates in various localities and industries under provincial legislation. These are outlined in Appendix E. In 1936 wages were increased in many establishments in all manufacturing industries.

Logging and Sawmilling

In logging and sawmilling steep increases in wages appeared up to 1920, followed by particularly steep decreases in 1921, after which substantial increases occurred in 1923 and 1924, with a decrease in 1925 and slight increases each year thereafter until 1930 when more decreases than increases appeared. During 1931 decreases were general, and again in 1932, wage reductions of twenty per cent being quite common. In 1933, wages were still downward but there was a pronounced upward trend toward the end of the year for the ensuing season. In 1934, substantial increases in wages were general both in logging and in sawmills so that the index number rose by about twenty per cent. In 1935 the increases averaged five per cent. In 1936 wages were again upward, the increases averaging nearly nine per cent.

Nature and Scope of Report

The main object of these reports is to show the changes in wages rates and in hours of labour during the periods covered. The figures given in each report afford a continuous record for the years included, the data being from the same sources as far as is possible. Whenever a new source of information becomes available, the figures for previous years are secured, if possible, and the record is revised accordingly.

Information is compiled from reports secured annually* from representative employers and trade unions, and also from union

* The information is obtained in June for building trades, civic employees, trucking and cartage, longshoremen, logging and sawmilling, pulp and paper mills, and for automobile manufacturing while for other trades and industries the information is secured chiefly in September. For the classes covered in June, later information is frequently received and used.

agreements. Figures are secured from practically all the large establishments in the various industries and from a representative number of the smaller establishments. These reports are supplemented by figures obtained by officers of the Department and by resident correspondents of the LABOUR GAZETTE in the principal industrial centres.

Wages in manufacturing are shown by samples numbered one, two, etc., each sample showing the predominant rate in a certain establishment; in some cases, for large establishments two or three samples are given. In the present report additional samples of rates above or below the predominant rates have been included where an appreciable number of workers were receiving such rates; where it appears to be preferable a range of predominant rates is used. For common labour in factories, sample rates are given by localities for the principal manufacturing centres.

For the following industries wages are given in the form of samples as in the case of factory labour: grain elevators, electric current production and transmission, telephones, laundries, logging and sawmilling, and metal mining. The locality in each case is not given as it would in many instances make possible the identification of the particular establishment.

Figures for particular localities are given for building, metal, and printing trades, electric railways and civic employees in Tables I and II, and for trucking and cartage, and longshoremen in Table III, also for common labour in factories in Table IX.

The statistics as to building trades show the prevailing rates of wages and hours of labour for nine classes of labour for the years 1920, 1926, 1930, 1931, 1932, 1933, 1934, 1935, and 1936, for the building season beginning in the spring of each year. During the year 1931, however, changes occurred later in the season more extensively than is usual, and the rates in effect at the end of the year were therefore obtained and included. For 1933 a similar survey was made again toward the end of the year in several cities. As in all previous years, changes in rates reported down to the end of the year, from the sources mentioned above, are included. In Quebec, Ontario and Alberta, these include new agreement rates made obligatory on all employers affected under provincial legislation as to collective agreements and industrial standards; in British Columbia they include minimum rates for the construction industry under the Male Minimum Wage Act; and in Manitoba under the Fair Wages Act. Such rates of wages and hours of labour are given in Appendix E.

On steam railways, wages of employees on the regular staffs are fixed according to agreements between the several railways and the employees, members of the organizations of railway employees, the principal railways having the same rates for nearly all the principal classes. The figures published are taken from these agreements.

In coal mining, the wages in the principal districts are arranged by agreements between the coal mining operators and the employees, in most cases represented by unions and in others by committees of employees. The figures published from 1920 to 1933 were taken from such agreements. The figures for average earnings of contract miners, however, were received from representative employers in each district. In some of the mines in these districts the wages of unorganized employees are somewhat lower than the rates in such agreements. For Report No. 18, and subsequent reports, statements as to wage rates and hours of labour have been requested from the operators of all the larger mines throughout Canada and the figures so secured have been compiled by provinces or districts. The resulting figures include those for many mines not operated under agreements as to wages and working conditions, and cover the mines in New Brunswick, Saskatchewan and the interior of British Columbia for which figures were not previously published.

In metal mining the rates of wages and hours of labour are shown as samples for mines in the various parts of Canada, secured from representative employers.

In logging, Table VII, the data each year is for the season beginning in the autumn and ending in the spring in Eastern Canada.

Data as to Hours

In earlier reports the hours of labour shown throughout were the standard or regular hours per week, per day, etc., and did not indicate the hours actually worked either overtime or on short time. During 1931 a number of establishments in many of the manufacturing industries reported operations on a short time basis. In the report covering that year, No. 15, wages for such establishments were given on an hourly basis or brought to a basis of full time earnings per week, per day, etc., the resulting figures as to wage rates being therefore on the same basis with those for 1926 and 1930 in the tables.

In Report No. 16, with figures for 1930, 1931 and 1932, in the tables on manufacturing industries, the hours of labour for these years were those reported by employers, whether

short time or regular hours, and the wage rates were brought to an hourly basis, except in certain industries, clothing, bread, cake, biscuit, candy, brewing and paper box making for which regular hours were reported chiefly. The same procedure has been followed in subsequent reports except that wages for boot and shoe manufacturing are given on a weekly basis with the hours shown as reported. In this industry, as in some instances in clothing manufacturing, the hours actually worked by individual piece workers are usually not reported and the hours shown are those on which the department or factory is operated.

Index Numbers of Wage Rates

In Report No. 1 tables of index numbers were given in order to show the general trend of the movement in rates of wages. The first set of index numbers was for the rates of wages from 1901 to 1920 in the thirteen selected cities. For each series of rates, that is, for each trade or occupation in each locality, index numbers were calculated both from the hourly rates and from the weekly rates, and these index numbers were averaged for all localities, by groups, thus indicating the relative changes in weekly rates and in hourly rates. The year 1913 was taken as the base period, that is the rate for 1913 in each case was taken as 100, so that the index numbers showed the percentage changes in rates from time to time prior to and since that date. An average was also made for all of the series in these tables, in order to indicate the general trend in wages in such trades as a whole. In making the average index numbers for the six groups the simple arithmetical averages were taken, no allowance being made for the importance of each trade or group by using a system of weighting. In Report No. 3 this table of index numbers for the thirteen cities was brought down to September, 1921.

In subsequent reports the index numbers of hourly rates from 1901 to 1921 have been reproduced, with figures since 1921 calculated by ascertaining the average increase or decrease per cent in the figures for each group each year from the figures for the preceding year and adjusting the group index number accordingly. The index numbers therefore show approximately the movement of wage rates in each group for the past year as compared with the movement in previous years and show current levels as compared with levels in 1913. In Report No. 3 index numbers of daily wages in coal mining were given, calculated in the same manner as the index numbers in Report No. 1. The index number for the coal mining group since 1921 has been calculated in the same manner as those for the other groups. The index numbers for metal trades, previously calculated from Section *b* in Table I, omitted for 1931 and 1932, were calculated from the average percentage changes in the samples for such trades in Table X for those years.

A table of index numbers of wages for factory trades, for common labour in factories, and for lumbering, logging and sawmilling, calculated from the sample rates published was also given for the period 1911 to 1920 in Report No. 1. These figures have been brought down to 1936 in the same manner as the other index numbers since 1921 were calculated.

The classes of labour for which rates were used for the calculation of index numbers for the period 1901 to 1936 are, in the main, skilled trades; and practically all of these classes, including the unskilled, are organized to a great extent in trade and labour unions. The index numbers for these six groups therefore show the trend of wage rates in a number of organized occupations whose members, except coal miners and steam railway employees, work chiefly in cities. They do not, however, indicate the changes in wages outside of industrial centres.

The index numbers calculated from sample rates of wages in factories show the trend of wages for labour in manufacturing industries in which there are many establishments in small centres as well as in cities. The figures for lumbering cover sawmilling in both large and small centres and logging in the principal districts.

Weighted Average Index Numbers

For the present report, in addition to the simple average for the six groups with figures from 1901 to 1936, weighted averages have been calculated for these six groups and also for all nine groups in those years for which figures are available. The index number for each group is weighted by the average number of wage-earners in the industry represented, as shown by the decennial or the annual industrial census of 1921 and of 1931, the average of the figures for these two dates being taken in each case.

The weights were as follows (in thousands): building trades 143; metal trades 131; printing trades 25; electric railways 18; steam railways 161; coal mining 28; common factory labour 110; miscellaneous factory trades 363; logging and sawmilling 77.

It will be observed that this weighting has most effect in modifying the effect on the general averages of the figures for coal mining and lumbering in which from time to time since 1920 the changes have been quite different from those in the other groups.

Weighting, within groups, although desirable, has not been done. In such groups by occupations or industries weighting makes comparatively little difference as rates of wages for the various classes of labour tend to rise and fall to the same extent even in different localities. In the three groups, Common Factory Labour, Miscellaneous Factory Trades, and Logging and Sawmilling, the index numbers, being calculated from samples, the averages are automatically weighted by the number of samples which vary according to the number of workers in the various occupations and industries.

*Rate and hours approved under Industrial Standards Act, Nova Scotia, 1936.

** Beginning in 1934 agreements approved by Order in Council under the Collective Labour Agreements Extension Act, Quebec, 1934, established minimum rates of wages for various trades in cities, towns and other defined jurisdictional territory throughout the province. In 1935 and 1936 the minimum rate in each range is that approved under the Act. For regulations under the Quebec Act, 1933, respecting the Limiting of Working Hours, see Appendix E.

LABOUR IN VARIOUS TRADES IN CERTAIN CITIES

* The range of hours shown are full-time weekly hours; from 1931 to 1935 actual shop hours in many establishments were on a short time basis as low as 24 hours per week; a 40 hour week has been reported as standard in many cases. Data for metal trades on steam railways and in mines appear in tables for those industries.

* Maximum rates based on length of service; in most cities bus drivers, on lines operated in connection with street railways, receive the same maximum rates of wages as one man car operators.

‡ Including shedmen, pitmen, cleaners, blacksmiths, carpenters, painters, etc.

† Including armature winders, wiremen, etc.

§ Including troublemen, and groundmen; in some localities line maintenance work is performed by employees of light, heat and power distribution utilities, rates for which are included here.

§§ Where a range appears, figures represent predominant rates.

(a) Deduction from earnings, 10 per cent.

(b) Deduction from earnings: 10 per cent in 1932 and 1933; 15 per cent in 1934; 10 per cent in 1935 and 1936.

(c) Deduction from earnings, 5 and 7½ per cent.

(d) In summer 54 cents per hour, two men cars, 59 cents, one man cars, 42 hours per week.

(e) Deduction from earnings: in 1932, 5 per cent and up: in 1933, 6 per cent and up: in 1934, 1935, 1936, 4 per cent and up.

(f) Deduction from earnings: in 1932, 4 per cent; in 1933, 1934 and 1935, 10 per cent: in 1936, 7 per cent.

(g) Deduction from earnings: in 1932, 4 to 8 per cent and up; in 1933 and 1934, 4 to 10 per cent; in 1935, 4 to 9½ per cent.

(h) Deduction from earnings, Dec. 1, 1932, also 1933, 1934, 5 per cent; 1935, 2½ per cent.

(j) On Oct 1, 1920.

(k) On October 1, 1920, 50 cents per hour.

(l) On June 1, 1920, 50 cents per hour.

(m) No two men cars in operation in Regina since 1921; in Calgary very few.

(n) Per month.

Shop labourers, per hour	cents	48½	40	35	38	40	40–42

*Differentials on certain lines or divisions above these rates. Nearly all classes are on the basic 8-hour day with time and one-half for overtime, but in some cases some other consideration has been arranged.

†Machinists; boilermakers; blacksmiths; plumbers, etc.; sheet metal workers; cabinet makers; carpenters, coach, locomotive and bench; welders, etc.

‡Freight car carpenters; freight car painters; car inspectors, car repairers, etc.

§Since 1918 employees are allowed one minute extra, for checking in and out, for each hour actually worked, thereby increasing earnings approximately one cent per hour.

(a) On Western lines Port Arthur and west, until 1929 in addition to these rates boilermakers' helpers received 5½ cents; blacksmiths' helpers, 4 cents, and other helpers 3 cents; since May 1, 1929, the differentials on western lines were boilermakers' helpers 4 cents, other helpers 2 cents.

(b) Deductions from each employee's earnings on basic rates effective as follows. Train, engine and telegraph service, 10 per cent Dec. 1, 1931; 20 per cent May 1, 1933; 15 per cent Nov. 1, 1933; Maintenance of way and bridge and building, 10 per cent May 1, 1932; 15 per cent Dec. 1, 1933; Locomotive and car shops, 10 per cent April 1, 1932; 15 per cent Dec. 16, 1933, with certain exceptions. (LABOUR GAZETTE, December, 1933, page 1212.) Deduction amended for all classes effective as follows: Jan. 1, 1935, 12 per cent; May 1, 1935, 10 per cent. (LABOUR GAZETTE, November, 1934, p. 991; December, 1934, p. 1085.)

TABLE III.—WAGES AND HOURS OF LABOUR IN STEAM RAILWAYS, TRUCKING AND CARTAGE, STEVEDORING, AND GRAIN ELEVATORS

* The figures given for contract miners are the average earnings at piece rates and for some mines the figures include helpers and loaders on piece work; the figures given for machine and hand miners are rates per day.

† No figures for Chinese employees included.

‡ Higher rates are paid in two or three mines for some of these classes; also in the large mines for certain positions. In 1935 and 1936 nearly all surface employers were put on the eight hour day.

* In Yukon Territory a few hundred tons of coal have been mined each year employing two to four miners, usually from 50 to 100 days; in 1933 wages averaged $12.38 per day for 51 days, four miners; in 1934 wages averaged $7.04 per day for 71 days, three miners; in 1935 wages averaged $7.00 per day for 50 days, three miners. For 1921 the figures were included with British Columbia. In Manitoba, coal mining operations were commenced in 1931 employing 38 men for an average of 23 days, wages averaging $3.46 per day; in 1932, the average number of miners was 6, averaging $2.84 per day, 1,128 man working days; in 1933 the average number of miners was 10, average wage $2.10 per day, 2,056 man working days; in 1934 the average number of miners was 12, average wage $2.03 per day, 3,132 man working days; in 1935 the average number of miners was 12, average wage $1.15 per day, 2,571 man working days.

† Prolonged dispute during year.

‡ Figures calculated by dividing number of man days worked into total wages paid.

§ Prior to 1933 the figures for Nova Scotia included certain employees handling coal at a distance from the mine.

APPENDIX D

Weekly Earnings of Employees in Merchandising and Service Establishments in Canada, 1935.

A report issued by the Dominion Bureau of Statistics entitled "Weekly Earnings of Employees in Merchandising and Service Establishments in Canada, 1935," 99 pp., afforded data as to the average weekly earnings of employees with numbers employed for four classes of establishments: independent retail stores, chain stores, wholesale trade, and motion picture theatres. The figures as to independent retail stores were chiefly from those which had an annual business of 20,000 or more in 1930 as shown in the census of 1931. This section included department stores, restaurants, gasoline filling stations, garages, as well as retail businesses of various kinds. The information on chain stores was secured from all companies operating four or more units in the same or similar lines of trade and included earnings of store managers, clerks, cashiers, delivery and any other store employees but not for head office staff, warehouse and transportation employees. For the section on wholesale trade information was secured from all the larger wholesale dealers and from a number of sales offices and distribution branches maintained by manufacturers. For motion picture theatres, reports were secured from all operators of such establishments in Canada.

In addition to the data as to the numbers of employees and average weekly earnings the report contained tables showing the percentages of employees in each kind of business by provinces whose weekly earnings fell within specified ranges: under $6, $6 to $6.99; etc. Part time employees were included in this analysis but not in the other tables. Earnings by quartile groups were also given.

The accompanying table shows the average weekly earnings and numbers of employees, male and female by kinds of business and by provinces. The figures as to each kind of business by provinces are not included.

APPENDIX E

WAGES AND HOURS OF LABOUR UNDER PROVINCIAL LEGISLATION AND ON FEDERAL GOVERNMENT CONTRACTS IN CANADA

Legislation providing for the regulation of wages and hours of labour has been enacted by various provinces in Canada with respect to: minimum wage rates for females established by government boards in all provinces except Prince Edward Island which is not extensively industrial; minimum wage rates for males established by government boards in British Columbia, Manitoba and Alberta, or under special regulations for certain industries such as forest operations in Quebec and New Brunswick; the extension by Order in Council of the rates of wages and hours of labour specified in a collective labour agreement between representative employers and workers to all engaged in the industry in the same district in Quebec, Ontario, Alberta and Nova Scotia; the limitation of hours of work in industries generally or in particular industries or trades by Order in Council or provincial boards.

Until 1935, federal regulation of wages and hours of labour applied only to conditions on federal government contracts. In 1935 three statutes to implement conventions of the Industrial Labour Conference were passed: the Limitation of Hours of Work Act, Minimum Wages Act and Weekly Rest in Industrial Undertakings Act. After reference to the Supreme Court of Canada and the Judicial Committee of the Privy Council these Acts were declared invalid in January, 1937.

Minimum Wage Rates on Federal Government Contracts

In accordance with a Resolution of the House of Commons in 1900, the Fair Wages Policy of the Federal Government has provided for the observance of rates of wages generally accepted as current for competent workmen in the district where the work was performed or, in the absence of current rates, for fair and reasonable rates. This policy applied to building and construction work and to the manufacture of government supplies.

In 1922 the application of this policy by the various departments of the government was standardized under an Order in Council, setting forth the labour conditions to be inserted in contracts for building and construction and for the manufacture and supply of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees; mail bags, letter boxes, and other postal stores.

In 1930, the Fair Wage and Eight Hour Day Act was passed, applicable to all contracts for construction, remodelling, repair or demolition of any Federal work. This statute provides for the observance of current rates of wages and requires also that wages shall in all cases be such as are fair and reasonable and that the working hours are not to exceed eight a day.

On December 31, 1934, the labour conditions previously applicable to contracts for the manufacture of various classes of Government supplies as listed above, were rescinded and new conditions substituted therefor. (Labour Gazette, January, 1935, page 24.)

The requirement for the payment of wages not less than current rates or fair and reasonable rates, if there are no current rates, is retained, but it is also provided that males and females under 18 years of age will be entitled to rates of wages not less than those provided for women and girls in the minimum wage scales of the respective provinces. In certain of the Maritime Provinces where no minimum wage legislation is in effect, the contractors are required to pay the males and females under 18 years of age wages not less than those provided for women and girls under the Minimum Wage Act of the Province of Nova Scotia.

It is also provided that in no event shall the wage rate for male workers 18 years of age and over be less than 30 cents per hour, and for female workers, 18 years of age and over, 20 cents per hour, but in any cases where the Provincial Minimum Wage laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contract work. For instance for a 50 hour week on a Federal Government contract a male 18 years of age and over, whether experienced or inexperienced, must be paid not less than $15 and a female $10 even if the provincial minimum scale may provide $6, $7, $8, etc., but if the provincial minimum scale is in excess of $15 in the case of male and $10 in the case

of female workers then the provincial scale must prevail.

The Fair Wages and Hours of Labour Act, 1935

During the 1935 session of Parliament the Fair Wages and Hours of Labour Act, 1935, was passed, to come into effect on May 1, 1936, repealing the Fair Wages and Eight Hour Day Act, 1930. The new statute provides for the forty-four hour week and for other labour conditions in work under federal government contracts for building and construction and on works towards which federal aid is granted by way of subsidy, loan, etc., as before, but extends the list of such works to include those carried out by any provincial and municipal authority if financial aid is given by the federal government "unless the grant or payment is by statutory authority or by agreement with the Government of Canada excepted." It is also provided that regulations may be made to require the furnishing of any necessary information to ensure the enforcement of the statute. Any contract may be exempted from the Act by Order in Council before being entered into.

Minimum Wages for Female Employees

Between 1918 and 1930 statutes providing for the establishment of minimum wage rates for females by boards or commissions had been passed in all of the provinces except Prince Edward Island, which is not to a great extent industrial, the dates being as follows: British Columbia and Manitoba, 1918; Quebec and Saskatchewan, 1919; Nova Scotia, Ontario and Alberta, 1920; New Brunswick, 1930. In Quebec the Act was not put into force or orders issued until 1926, in Nova Scotia not until 1930. The New Brunswick statute comes into force on proclamation and has not yet been proclaimed.

The following tables give data as to minimum rates of wages for females under orders of the various provincial boards in effect at the end of 1936. The figures as to hours are those for which the minimum rates are payable under such orders, subject to certain modifications, or are the maximum hours under the minimum wage or other legislation, as explained in footnotes.

The more important of the rules for the application of the rates under the orders have been given in footnotes. For complete information it is necessary to refer to the orders as issued by the various provincial boards. These have been given in summary form in the Labour Gazette from time to time as issued. In some provinces these orders include regulations as to employment conditions, sanitary conditions, etc. The boards have power to fix lower rates for inexperienced workers, to issue licences for lower rates of pay for handicapped workers and to meet special conditions in the nature of emergencies.

I.—MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN NOVA SCOTIA*

Cities and towns of 17,000 population and over	11.00	7.00–10.00*c*	7.00–10.00*c*	48*h*
All towns under 17,000 population	10.00	6.00– 9.00*c*	6.00– 9.00*c*	48*h*

*Minimum wage orders apply to cities and incorporated towns. Permits may be issued for handicapped workers to work for lower wages and also for variation or suspension of the regulations in exceptional conditions.

†Number of inexperienced adults or young girls or both not to exceed 25 per cent of total female working force except where total working force is less than four.

‡Except where otherwise noted, hours for which minimum rates payable to be not less than 44 nor more than 50 per week; work in excess of 50 hours to be paid at proportionate rates; for less than 44 hours deductions may be made at proportionate rates. Employees required to wait on the premises to be paid for such waiting time. Under Nova Scotia Factories Act, there is no restriction on the normal hours for women in factories but in case of emergency the inspector may permit hours up to 12½ a day and 72½ a week for not more than 36 days in the year.

(a) In these occupations, if lodging is furnished, not more than $2 may be deducted from wage; if board is furnished not more than $4 per week for board nor 25 cents for each meal may be deducted. In the case of laundries, not more than $4.50 may be deducted for board and lodging in Halifax and other towns, except in Sydney and Glace Bay where not more than $1.50 for lodging and $4.50 for board may be deducted. In the case of shops and stores, the only provision is for a deduction of a maximum of 25 cents per meal.

(b) After one year, minimum rate for experienced adult to be paid.

(c) After 18 months, minimum rate for experienced adult to be paid, but no young girl on reaching age of 18 to receive less than rate for inexperienced adult.

(d) Pieceworkers to be paid minimum wage scale for first six months. For pieceworkers of more than six months' experience it is sufficient if at least 80 per cent receive the minimum established rate.

(e) A probationary period of three months is allowed for which no wages are stipulated.

(f) Seats to be provided in the proportion of at least one seat for every four employees or fraction thereof.

(g) From December 15 to December 31 the hours in shops and stores for which the minimum wage must be paid may be extended up to 60 a week. Hours in excess of 50 per week, except between December 15 and December 31, must be paid for at not less than one and one half times the minimum rate calculated on the basis of a 50 hour week.

(h) The wage rates are payable for 48 hours per week or for the usual number of hours normally worked in the establishment if less than 48.

(i) If a special uniform is required it shall be furnished by the employer without cost to the employees. An inexperienced employee who has had three or more months instruction in a school or hairdressing establishment or beauty parlours for which a fee has been paid is to start at the rate of wages for an "inexperienced employee" after six months' experience.

(j) An office worker presenting a diploma from an accredited Business College or the Commercial Department of a High School is entitled to work only three months in order to qualify for the full minimum wage.

Quebec, Three Rivers, Sherbrooke, Hull and cities of a population over 25,000	10.00	6.00– 9.00	48

* Minimum Wage Orders apply throughout the Province unless otherwise noted in this table. No male worker may be employed on work ordinarily performed by women at less than the minimum wage fixed for women for such work. Permits may be issued by the Minimum Wage Board for lower wage rates for girls or women who are physically unable to do the normal amount of work. Wage rates for female workers are also included in certain agreements under the Collective Labour Agreements Extension Act outlined under "Wages and Hours of Labour under Collective Agreements, etc.".

† Hours worked less or more per week than those shown below must be paid at proportionate rates, except where noted. Any employee required to wait on the premises shall be paid for the time thus spent. Under the Industrial and Commercial Establishments Act, maximum hours per week in industrial establishments for females are 55 and in commercial establishments in cities or towns of over 10,000, 60 per week (except last two weeks of December) but permits to work up to 65 hours in cases of emergency may be granted by the inspector under this Act for not more than 6 weeks in a year.

‡ Per hour.

(a) At least 65 per cent of the employees must be paid the higher minimum rate.

(b) After two years' apprenticeship, experienced workers' rate must be paid.

(c) The number of apprentices must not exceed half of the total female working force.

(d) Pieceworkers to be paid the minimum wage rate for beginners during their first six months of apprenticeship. For those pieceworkers of six months' experience or more, it is sufficient if at least 80 per cent receive these minimum wage rates.

(e) The Board may grant permits of variation or suspension of any of these regulations in exceptional conditions.

(f) If a special uniform required, it shall be furnished and laundered at the expense of the employer.

(g) Minimum rates payable for the regular recognized working period of the establishment.

(h) Overtime to be paid for at one and a half times the regular minimum rates; short time to be paid for *pro rata* of the regular minimum rates.

(i) At least 65 per cent of employees must be paid the highest minimum rate, another 25 per cent the intermediate rate and the remaining 10 per cent the lowest minimum rate.

(j) At least 70 per cent of employees must be paid the highest minimum rate, another 20 per cent the intermediate rate and the remaining 10 per cent the lowest minimum rate.

(k) At least 70 per cent of the employees must be paid the highest minimum rate, another 15 per cent the intermediate rate and the remaining 15 per cent the lowest minimum rate.

(l) In the first three zones, the minimum rates are payable for a week of 40 to 48 hours, except in stores employing not more than two female employees where they are payable for a week of 40 to 54 hours. Overtime, over 48 hours (or 54 in the latter stores) in the first three zones and over 54 hours in the fourth zone must be paid at time and one half, except for employees whose weekly wage is over $15. Employees in the first three zones who are employed less than 40 hours per week may be considered as part time employees, in which case they are entitled to a bonus of 12½ per cent over their regular wage. Extra employees, that is those engaged exclusively on Fridays or Saturdays or occasionally any other two days in the week, must be paid 25 cents, 20 cents, 18 cents, 16 cents or 14 cents per hour respectively according to the five zones provided in this Order.

(m) The number of apprentices in any establishment must not exceed 25 per cent of the total female employees, except if less than 4 employees, when one apprentice may be employed.

(n) At least 65 per cent of the employees must receive the highest rate, another 15 per cent the intermediate rate and the remaining 20 per cent at least the lowest rate.

(o) At least 65 per cent of employees must be paid the highest rate, another 20 per cent the intermediate rate and the remaining 15 per cent at least the lowest specified rate.

(p) At least one-half of employees must be paid the highest rate, another 15 per cent the intermediate rate and the remaining 35 per cent at least the lowest rate.

(q) At least one half of the employees must be paid the higher minimum rate.

(r) Employees employed less than 48 hours per week must be paid at least 35 cents per hour on the Island of Montreal and 30 cents in the other cities of a population of over 25,000.

(s) Overtime over 55 hours must be paid at time and one-half.

(t) Room and board included; if employee is not given lodging, she will be entitled to a supplement of $8 per month; if she receives neither lodging or board, to a supplement of $18 per month. Gratuities cannot be retained by the employer nor included as part of wage.

(u) Meals included.

*Minimum wage rates apply throughout the Province unless otherwise stated in the order. No male worker may be employed in a class of employment for which a minimum wage is fixed for women at less than that minimum wage. Special permits may be issued to physically handicapped workers or those over 60 years to work for lower wages. Minimum wage rates for female employees are also included in certain schedules under the Industrial Standards Act outlined under "Wages and Hours of Labour under Collective Agreements, etc.".

† No young girl worker on reaching age of 18 years is to receive less than rate fixed for inexperienced adult.

‡ Minimum weekly rates are payable for these hours or for the usual number of hours per week normally worked in the establishment, if less than this number. No deduction below minimum wage for absence is to exceed value of the time lost. Overtime to be paid at proportionate rates. An employee required to wait on the premises to be paid for such time. Under Factory, Shop and Office Building Act, maximum hours for females are 60 per week, but in factories permits to work up to 12½ hours per day or 72½ hours per week in cases of emergency may be given by the factory inspector for not more than 36 days in the year.

(a) For indentured apprentices, no wage stipulated for first three months, the lowest rate here shown is for the second three months; after two years experienced workers' rate to be paid.

(b) All beginners on piecework to be paid not less than the time work rates for beginners during first six months. For pieceworkers of more than six months' experience, it is sufficient if at least 80 per cent earn the minimum rate.

(c) After one year, full rate for experienced worker to be paid.

(d) After 18 months, full rate for experienced worker to be paid.

(e) Lodging not to be charged at more than $2.00 per week and board $5.00 per week in Toronto and at $1.50 and $4.50 in the rest of the province, except in the canning industry where not more than $1.50 for lodging and $4.50 for board may be charged throughout the province; single meals at not more than 25 cents.

(f) For piecework in the canning industry, it is sufficient if 60 per cent of the pieceworkers earn the minimum rate.

(g) All workers between the ages of 18 and 60 years.

(h) All workers under 18 or over 60 years of age.

(i) Not more than one-third of employees to be apprentices, except when staff is less than four.

(j) An employment of ten weeks or more in any period of six months to be deemed sufficient for that of six months in computing time of apprenticeship.

(k) After 3 years, full rate for experienced worker to be paid.

(l) After 2 years, full rate for experienced worker to be paid.

(m) The number of employees paid as inexperienced shall not exceed 40 per cent of the total female working force except where there are less than four employees.

(n) An employee working less than 40 hours per week to be paid on hourly basis.

(o) A young girl employed in this industry for a year or more before reaching the age of 18 years must be paid rate for experienced adult on reaching the age of 18 years.

(p) After 6 months, full rate for experienced worker to be paid.

(q) Any office worker with a diploma from an accredited business college or commercial department of a high school to be paid experienced worker's rate.

(r) If employed a year or more in an office before reaching the age of 18 years, a worker to receive experienced worker's wage rate on reaching age of 18 years. If working less than a year when reaching age of 18 years, experienced worker's rate to be paid as soon thereafter as the year's experience has been completed.

(s) A learning period of two weeks with no prescribed wage before minimum wage rates applicable.

(t) No deduction may be made from wages for the use, purchase or laundering of uniforms.

*Minimum wage orders apply to women and to boys under 18 in cities only, except where otherwise noted. (Special rates for boys and men in some industries are shown on page 127). In any class of industry where a minimum wage is established, no person 18 years or over to be employed at less than 25 cents per hour except where regulations of the Board provide for different rates. The Board may issue a permit granting modification of or exemption from the regulations in case of exceptional conditions.

†Maximum hours per week, except that specified numbers of hours of overtime are permitted by the Minimum Wage Board regulations for departmental stores and hotels, and by the Bureau of Labour for other occupations. Payment for such overtime to be at regular rates. Any employee required to wait on the premises, is to be paid for such waiting time.

(a) The number of learners and minors not to exceed 25 per cent of the number of experienced female employees in the case of departmental and retail stores, laundries, etc., and hotels and restaurants; and not to exceed 25 per cent of the total number of female employees covered by the other orders concerned.

(b) If board or lodging furnished by employer, the cost to the employee is not to exceed $2 per week for lodging, $4.50 for board or $6 for both; in hotels, restaurants, etc., and for general employees, not more than $2.50 for lodging and $4 for board may be charged employees.

(c) After six months, minimum rate for experienced worker to be paid.

(d) After one year, minimum rate for experienced worker to be paid.

(e) After 18 months, full minimum rate for experienced worker to be paid. (In furriers' establishments, if a minor reaches age of 18 years before this period, she is to serve only one half of the remainder of the learning period before receiving experienced worker's rate.)

(f) After 24 weeks, full minimum rate for experienced worker to be paid. Minors to be classed as learners.

(g) After four seasons of at least 10 weeks each, minimum rate for experienced worker to be paid.

(h) If establishment is associated with a shop or store, the same hours to be observed as by the selling staff of the shop or store. In establishments which remain open Saturday evenings, hours may be increased to 11½ for Saturday with a maximum of 49 per week except for millinery establishments in the month of December when maximum is 54 hours.

(i) After two years, minimum rate for experienced worker must be paid.

(j) Work in excess of 9 hours a day or 48 hours a week to be paid at 30 cents per hour unless the wages paid equals at least 30 cents per hour for the actual hours worked.

(k) Employees who have been working one year or more to be considered experienced adults on reaching the age of 18 years.

(l) This Order covers all departments including manufacturing and special service departments except where another Order of the Board applicable to the same work in other industrial classes exists which is more favourable to the employee, in which case the more favourable to the employee prevails.

V.—MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN SASKATCHEWAN*

* The Minimum Wage Orders apply only in cities and within a radius of 5 miles of them. Both male and female workers are governed by them. The Board with the approval of the Lieutenant Governor-in-Council, may extend the Orders to any other part of the Province.

† Or for the usual number of hours normally worked if less than 48, except in the Order governing hotels, restaurants and refreshment rooms.

(a) Part time workers must be paid a minimum of 30 cents per hour if experienced adults, 25 cents if inexperienced adults and 20 cents if inexperienced minors.

(b) Apprentices, whose indenture is approved by the Minimum Wage Board are to be paid according to the wage rates stipulated in the indenture.

(c) Not more than 25 per cent of the total number of workers in any class of employment in any establishment may be inexperienced workers, unless the total number of employees is less than 4, in which case one experienced worker may be employed.

(d) After one year's experience, the wage rate for experienced adult workers is the minimum.

(e) After one year's experience (or on reaching the age of 21 years if this is sooner), the minimum for inexperienced adult workers must be paid.

(f) Any work in excess of 48 hours in any one week must be paid on a *pro rata* basis, but in no case at less than 20 cents per hour.

(g) All those connected in any way with the sale or delivery of merchandise are included, except druggists and drug apprentices and except delivery done on foot or on bicycle.

(h) No reduction from weekly wage rates may be made on account of statutory holidays.

(i) After 18 months' experience, the minimum rate for experienced workers is to be paid.

(j) Work in excess of 48 hours in any week and part time work must be paid at a minimum rate of 30 cents per hour to experienced adult workers, 25 cents to inexperienced adults and 20 cents to inexperienced minor workers, with a minimum of two consecutive hours for any period of employment.

(k) In no case may hours exceed 56 per week, except with permit from the Board.

(l) All employees are included except bell boys, elevator operators and porters. Hotels include boarding or rooming houses with five or more beds for use of boarders or lodgers and also include premises licensed under the Liquor Act. No person under 16 is to be employed.

(m) Where board or lodging is furnished by the employer, not more than $4.50 for a full week of 21 meals, or 20 cents per meal if less are furnished, and not more than $2 per week for a full week's lodging or 30 cents for each day's lodging if for less than a week, may be charged to the employee, provided that for inexperienced minor workers, the charge for board and lodging may not exceed the minimum weekly wage payable less $2. If any uniform is required, it will be furnished by the employer.

(n) Or 25 cents per hour. Kitchen help $10 per week or 21 cents per hour.

(o) Or 20 cents per hour. After 6 months' experience, the minimum rate for experienced worker must be paid.

(p) $6 per week or 12½ cents per hour for first four months and $7 per week or 15 cents per hour for second four months, after which 8 months (or from 21st birthday if reached before the 8 months), minimum rate for inexperienced adult worker must be paid.

(q) All time worked in excess of 48 hours per week must be paid *pro rata*.

(r) Not more than one indentured apprentice or one inexperienced worker is permitted for every experienced worker employed on the premises of any employer.

(s) Any employee who performs services for a customer for which the customer is required to pay is included in this Order. An employee required to wait on the premises between appointments must be paid for such time.

(t) After 6 months' experience (or from 21st birthday if reached before the 6 months), the minimum rate for inexperienced adult worker must be paid.

(u) Hours may not exceed 57 in any one week without a permit from the Board. Work in excess of 48 hours in any week must be paid at the minimum rate applicable, but in no case at less than 20 cents per hour.

(v) Under the Factories Act, a permit to work longer hours must be secured from the factory inspector who may permit a maximum of 12½ hours in any one day, 72½ hours in any one week, in emergencies, for 36 days in the year.

(m) From November 1 to December 24, workers in mail order department, and from December 15 to December 24, the sales force may work 9 hours per week overtime; also at stocktaking one additional night may be worked.

(n) Except that 11½ hours may be worked on Saturday.

(o) Uniforms required must be furnished and laundered at the expense of the employer.

(p) No minor (under 18) to be employed. Ticket sellers and ushers working less than 40 hours per week must be paid at least 30 cents per hour.

(q) Or 25 cents per hour.

(r) A probationary period of 3 months with wage rates not stipulated; after 18 months further experience, full rate for experienced worker to be paid.

(s) After three months, full minimum rate for experienced worker to be paid.

(t) Or 20 cents per hour, except for "General Employees" for whom the rate is 21 cents.

(u) Where more than 8 female workers are employed, not more than 25 per cent of the total office staff to be learners or minors. A business course is to be the equivalent of experience.

(v) Girls of 15 years $8, of 16 years $9, of 17 years $10, of 17½ years $10.50.

(w) In places of a population of less than 1,000, from November to April inclusive, this minimum rate may be reduced by 10 per cent.

(x) Female cooks and male employees of 18 years or over in hotels may work more than 48 hours, with all such overtime at the hourly rate specified.

(y) Farm and market garden workers and private domestic workers are excepted and this Order is not effective if a lower rate is permitted by any other regulation under the Act.

(z) Hours for which minimum wage rates payable.

VI. MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN ALBERTA*

Industries and Occupations	Minimum Wages per Week		Hours†

Ushers in theatres, motion picture houses, music halls, cloakroom attendants in cabarets and dance halls	14.00	14.00	9	48

* Minimum wage orders apply to cities, towns and villages with a population of 600 or over and to Banff, Lake Louise, Waterton Park and Jasper, except in case of the Fruit and Vegetable Canning, Drying and Packing Industry in which industry the order applies throughout the province and except telephone operators. The Factories Act provides that wherever a minimum wage is fixed for female workers in any class of employment, no male worker to be employed for less, except indentured apprentices.

†Maximum hours, except that a temporary increase may be made with permission of Minimum Wage Board, any such overtime to be paid at regular rates. The minimum wage rate is payable for these maximum hours or for the usual number of hours worked in the establishment if less than these hours and more than forty per week. If the usual number of hours is less than forty per week, proportionate deductions from the minimum rate may be made.

‡ Not more than 25 per cent of total female staff may be apprentices.

(a) After 18 months, full minimum rate for experienced workers to be paid.

(b) After a probationary period of one month with no wages stipulated, 11 months may be worked at apprentice scale.

(c) In some cases full minimum rate for experienced worker to be paid after 9 months apprenticeship and in other cases after one year's apprenticeship.

(d) After two months, full minimum wage for experienced worker to be paid.

(e) After one year, full minimum wage for experienced worker to be paid.

(f) 10½ hours on Saturdays.

(g) The minimum wage order applies to all private telephone exchanges in cities, towns and villages having a population of 600 or over and to all public telephone exchanges where the number of subscribers exceeds 250.

(h) Where meals are furnished by employer, not more than $5 per week to be deducted from wages for meals; where lodging furnished, not more than $2 per week to be deducted for lodging.

(i) After 3 months, full minimum rate for experienced worker to be paid.

(j) If working more than 28 hours and not more than 48 hours per week $14.00 per week. Hourly wages 50 cents per hour.

Personal Service (includes employees in manicuring, hairdressing, barbering, etc., ushers in theatres, attendants at other public places of amusement, garages and service stations and drivers of motor cars and other vehicles):					
Manicuring, hairdressing, barbering, etc. *(p)*	14.25	10.00–13.00*(a)*	10.00–13.00*e*	.....	48
Ushers in theatres, music halls, lecture halls, etc	14.25	14.25	14.25	.....	48*m*
All others	14.25	14.25	14.25	.....	48

* Minimum wage orders apply throughout the Province. No male worker over 18 years except indentured apprentices may be employed at a class of employment for which a minimum wage for women is fixed at less than this minimum wage.

† Under Hours of Work Act, maximum hours per week except with permit from the Board of Industrial Relations. Overtime is to be paid *pro rata*. For the manufacturing industry, permission to work overtime must be secured under the Factories Act.

‡ Special licences may be granted by the Board for employment of adult learners at wage rates fixed in the licences but the number of such licensed employees not to exceed one-seventh of the total number of female employees in the establishment, except if less than seven employees when one adult learner may be allowed. The aggregate number of female workers with special licences and employees under 18 may not, however, exceed 35 per cent of the total number of female workers in the establishment.

(a) After one year, minimum rate for experienced worker to be paid.

(b) Except for tomato canning, experienced workers are to be paid 27 cents per hour up to 10 hours per day, 40 cents for hours over 10 and up to 12, and 54 cents for any hours in excess of 12, and for inexperienced workers, that is those with less than two months' experience, corresponding wage rates are 25 cents, 37½ cents and 50 cents per hour. For tomato canning, the minimum rates of 27 cents for experienced and 25 cents for inexperienced workers are payable for all time worked. The Order does not apply to employees packing or sorting products damaged by frost where such work is done by the grower.

(c) For some classes of manufacturing the scale for inexperienced employees is from $8 to $12 covering a period of 6 months, in other classes also from $8 to $12 but covering a period of one year and in a third class which includes printing and bookbinding, dressmaking, tailoring, manufacture of jewellery, furs, leather goods, boots and shoes, hand-made millinery, and other products the scale is from $7 to $13 and covers a period of 18 months. These schedules do not apply to regularly indentured apprentices whose indentures have been approved by the Board.

(d) The weekly rates for this industry are for a week of 40 hours or more. Hourly rates are set for those working less than 40 hours in a week, these rates being 35 cents with a minimum of $1.40 in any one day for experienced workers, 25 cents to 35 cents with a minimum of $1.25 in any one day for inexperienced adults and from 20 cents to 30 cents with a minimum of $1 in any one day for young girls under 18 years. For the week ending December 19, 1936, overtime was permitted with 45 cents per hour to be paid for all time worked over 48 hours in that week. Regular employees whose weekly hours were less than 40 in the week ending December 26, 1936, on account of the two holidays, and who were paid their customary weekly salary for such work were not required to be paid the higher hourly rates set for work of less than 40 hours per week. Employees of any age employed temporarily between December 7, 1936 and January 2, 1937, were to be paid a minimum of $12.75 per week for a week of 40 hours or more or 35 cents per hour if working less than 40 hours per week. Persons employed in the sale of Christmas cards by personal or door to door canvass were excluded from the provisions of this order from September 3, 1936, to December 31, 1936.

(e) On reaching age of 18 years after 18 months' experience in case of offices and 21 months in the mercantile industry, minimum rate for experienced workers to apply.

(f) After 9 months, minimum rate for experienced workers to apply.

(g) In an emergency, maximum hours may be increased up to 56 per week, and such overtime to be paid at one and one-half times the rate. Employees customarily on duty between 10 p.m., and 8 a.m., may work 10 hours instead of 8 per day.

(h) After one year, minimum rate for experienced worker to be paid.

(i) Apprenticeship of two years and rate of $12 to continue until reaching age of 18 years. If age of 18 is reached before completion of one year's apprenticeship, rate for experienced worker to be paid as soon thereafter as the year is completed.

(j) If board or lodging furnished by employer, not more than $3 per week for lodging and $5.25 for board to be deducted from wages.

(k) After three months, minimum rate for experienced worker is to be paid. For young girls, $12.00 is to be paid until age of 18 years.

(l) In case of emergency, 52 hours may be worked but time and one-half to be paid for work over 48 hours per week.

(m) $14.25 for over 36 and not more than 48 hours per week; $10.80 for over 18 hours and under 36 hours per week. For ushers employed after 6 p.m., on legal holidays and special matinees, 30 cents per hour with a minimum of 75 cents.

(n) The weekly rates for this industry are for a week of 40 hours or more. Hourly rates are set for those working less than 40 hours in a week, these rates being 37½ cents with a minimum of $1.50 in any one day for experienced workers and 30 cents with a minimum of $1.20 in any one day for inexperienced workers and for young girls under 18 years.

(o) This Order includes janitresses, janitress-cleaners and janitress-firemen. Monthly wage rates are: $125 for apartment buildings with over 50 residential suites, $100 for apartment buildings with 25 to 50 suites, $75 for apartment buildings with 13 to 24 suites and 35 cents per hour for all work in smaller buildings. Maximum rentals which may be charged janitresses for their own apartments are stipulated.

(p) The weekly rates for this industry are for a week of 40 hours or more. Hourly rates are set for those working less than 40 hours in a week, these rates being 37½ cents with a minimum of $1.50 in any one day for experienced workers, from 27 cents to 37½ cents with a minimum of $1.25 in any one day for inexperienced workers and for young girls under 18 years. Time spent waiting on call for employment as required by the employer must be paid for. On December 31, up to 11 hours may be worked, with payment for all work over 8 hours at time and one quarter.

(q) Weekly rates are for a week of 37½ hours or more. Hourly rates for those working less than 37½ hours are: 40 cents per hour for experienced workers, 30 to 37½ cents for inexperienced workers. A minimum of 4 hours' pay in any one day must be paid to such part time workers.

(r) In an emergency, hours may be increased to 52 hours a week, with time and one half being paid for all work over 48 hours.

Minimum Wage Rates for Male Employees

The following statements afford information as to rates of wages and hours of labour established under provincial legislation as to minimum wage standards for male workers.

New Brunswick

New Brunswick Forest Operations Act

Under the New Brunswick Forest Operations Act, 1934, the New Brunswick Forest Operations Commission was constituted with powers to make final decisions in labour disputes, subject to the approval of the Minister of Lands and Mines, and to fix minimum wage scales for the industry. The Act does not apply to work on Christmas trees or firewood operations. The Act permits the employment of men inexperienced or physically unfit for a full day's work at wages below the minimum rates established, if agreements approved by the Commission are signed by the employers and the men concerned.

On March 20, 1936, the New Brunswick Forest Operations Commission established, for stream driving, an average rate of wages of $2 per day and board or its equivalent in case of piece work, to be paid by any employer to his employees, provided that the wages paid to cooks shall not be included in determining the average wage. Foremen, book-keepers and clerks are not under the jurisdiction of the Act and their wages are not considered in making the average. For booming and sorting, the minimum rate is 20 cents per hour without board, provided, however, where board is furnished by the employer not more than 50 cents per day may be charged the employee.

Effective September 1, 1936, for cutting, yarding and hauling, the average wage rate paid by any employer to his employees shall be at least $31 per month and board net, and the minimum rate for each employee $27 per month and board net. Wages paid to cooks and the amounts paid to employees for piece work are not to be included in determining the average wage.

Fair Wage Act

In 1936, a Fair Wage Act provided that the Board of Commissioners of Public Utilities, when directed by the Minister of Health and Labour, may establish fair rates of wages and the maximum hours for which such wages shall be paid in any trade, industry or business. No regulation under this legislation had been reported up to the end of the year 1936.

Quebec

The Women's Minimum Wage Act, the orders under which are noted above in the table of minimum wage rates for female employees in Quebec, provides that no male employee may be employed at work which, in the opinion of the Minimum Wage Commission, is ordinarily and by custom performed by women, at a less wage than that fixed by an order of the Commission for such work performed by women.

Quebec Forests Operations Commission Act

Under regulations issued by the Commission for the Supervision and Control of Forest Operations under this Act, all timber limit holders and contractors carrying on forest operations on Crown lands were required to pay $30 a month net per month or its equivalent in case of piece work. On November 21, 1936, the Act was repealed but, following the decision made at a conference between the Minister of Lands and Forests and timber limit holders, the Minister informed all timber limit holders, October 23, 1936, that a minimum wage of $40 per month, board and lodging included, must be paid, on penalty of withdrawal of certain concessions in connection with licences for timber limits.

Ontario

Under the Minimum Wage Act it is provided that wherever, as determined by the Board, any male employee replaces any female employee at any class of employment for which a minimum wage is established, such male employee must be paid at least such minimum rate. (The minimum rates established for female employees are shown above in the table of minimum wage rates for female employees in Ontario.)

Manitoba

Prior to 1931, the Minimum Wage Act applied to female workers in cities only. By subsequent amendments made in 1931, 1933, 1934 and 1935, the scope of the Act was extended to include all workers, male and female, in shops, offices, places of amusement, mail order houses and factories in cities. The Minimum Wage Board is empowered to recommend, and the Lieutenant Governor in Council to declare that any Order of the Minimum Wage Board or that the provisions of the Act apply to any or all industries or trades and to any other part of the Province or to the whole Prov-

ince. It is provided that when regulations are made providing a standard of minimum wages for employees in any class of industry, no person of the age of 18 years or over shall be permitted to work as an employee in the industry at a rate less than 25 cents per hour except in cases where the Board has passed specific regulations providing for a different rate.

Orders of the Minimum Wage Board governing manufacturing and general industries, departmental stores and mail order houses apply to both male and female employees and are shown in the table above under "Minimum Wage Rates for Female Employees." Certain other Orders include separate wage scales for male workers or apply exclusively to male workers and these are noted below:

In the Order governing employment in hotels, restaurants, clubs, victualling houses and refreshment stands throughout the Province: in the area within the Greater Winnipeg Water District and the City of Brandon at any time, and in the City of Portage la Prairie from May to October inclusive, and in any summer resort from June to September inclusive, for male employees 18 years or over, the minimum is $12 per week or 25 cents per hour; for male employees under 18 years, $8 during the first six month period of employment in the occupation, $9 during the second six month period and $10 until such employee reaches the age of 18 years; and for bell boys of any age $8 per week; in the City of Portage la Prairie during the remainder of the year $10 per week or 21 cents per hour for male employees 18 years or over; in any other part of the Province, for male employees of 18 years and over the minimum is $10 per week or 21 cents per hour, except in places with a population of less than 1,000 where the minimum rates may be reduced by 10 per cent from November to April inclusive. Hours are limited to 10 per day, 48 per week, with one day or two half days off in the week, except cooks and male employees over 18 years of age in hotels, for whom time worked over 48 hours must be paid for at the hourly rate specified. In hotels of 100 rooms or more, hours of such employees may not exceed 54 in a week.

In the Order governing employment, in retail stores, of women in all parts of the Province and of boy workers under 18 years in Greater Winnipeg and Brandon, the minimum wage rate for boys is $8 per week during first six months of employment, $9 for the second six months and $10 thereafter, with the exception of messenger boys in drug stores for whom the minimum is $8, and boys working as part time workers at night for whom the minimum is 15 cents per hour. Hours for boys are limited to 9 per day, except Saturdays when the limit is 11½ hours; the weekly maximum hours are 50, with a full day off in seven.

The Order relating to manufacturing and general industries, as noted under "Minimum Wages for Female Employees," governs all workers in these industries throughout the Province. A separate Order is, however, in effect for boys under 18 years in the manufacturing industries in Greater Winnipeg and Brandon, which includes the work of boys in garages and filling stations, providing for the minimum wage rates of $8 per week for the first six months of employment, $9 for the second six months and $10 after one year's employment. Hours are limited to 9 per day, 48 per week. Each boy must receive one-half day off each week.

Another Minimum Wage Board order governs the employment in cities of men performing work generally done by boys. Work generally performed by boys is stated to be delivering telegrams or other messages, hand bills or advertising matter, delivering parcels on foot or on bicycle, office boys, shining shoes, delivering newspapers, setting up bowling alley pins, and other work of a similar nature when ruled as properly coming under this Order by an Inspector of the Bureau of Labour and when employers hold a certificate by said inspector. If such work is performed by a man over 18 years of age he shall be paid at the established rate for adult workers unless such man was in the employers' service in any such occupation on March 1, 1935, or after that date reaches the age of 18 years while in the employers' service in any such occupation, in either of which cases he may be retained by the same employer until an opportunity for promotion occurs and be paid at not less than the established rate for boys for a 48 hour week, that is $8 per week during the first six months of employment, $9 during the second six months and $10 after one year's employment.

This same order provides that duly indentured male apprentices may be paid at the wage rates stipulated in the indenture rather than the wage rates in the Minimum Wage Board order, providing the Board approves such indenture and provided the wage rates are not less than the rates established in the industry for persons under 18 years.

Highway Traffic Act

A regulation made by the Municipal and Public Utility Board constituted under this Act provides that the minimum wage rate for drivers of public service vehicles certificated

for passenger transportation be $80 per month, $20 per week, with a 9 hour day and a 6 day week.

Taxicab Act of Manitoba

This act applies only to taxicabs in Greater Winnipeg. A minimum wage of $15 per week is fixed for drivers employed by the week. For a driver employed otherwise than by the week a minimum of $1.40 per day must be paid for each day he is on duty. If on duty for more than four hours in any one day, 35 cents per hour to be paid for each hour in excess of four. Hours on duty are limited to 12 per day and 6 days per week. Provided the minimum wage is not reduced nor the hours increased, the Taxicab Board may vary the above conditions.

Fair Wage Schedule for Public and Certain Private Construction Works in Manitoba

Under the Fair Wage Act and Amendments, the Minister of Public Works (Manitoba) approved a schedule, effective June 15, 1936, establishing the minimum wage rates and the maximum working hours applicable to workers employed on certain public and private works of construction, remodelling, demolition or the repairing of buildings. Such public work is that authorized by the Minister of Public Works for which a contract or contracts have been made between the Minister and an employer. "Private Work" is that for which the contract or contracts exceed $100 and are done within the Greater Winnipeg Water District or any city or town of a population over 2,000 or any other part of the Province to which the provisions of this Act are extended by the Lieutenant Governor in Council, "but shall not include work which is done on property by or under the immediate direction and control of the owner, tenant or occupant thereof if no more than three men are employed in addition to the regular maintenance staff, if any, and if such work be not undertaken with a view to sale or rental of the property and shall not include work which is done by a maintenance man, or men employed by the month".

Manitoba Fair Wage Schedule*

Occupation	Winnipeg and radius of 30 miles	Other than Winnipeg and radius of 30 miles	Maximum hours per week
	Minimum rates per hour		
Asbestos workers—	$	$	
Journeymen	.75	.75	44
Improvers	.60	.60	44

Helpers (all men assigned to the trade other than above)	.42½	.37½	48
Truck drivers	.40	.40	48
Combined rate truck and driver:			
One ton capacity	1.25	1.25	48
Over one ton to two ton capacity	1.40	1.25	48
Over two ton to three ton capacity	1.90	1.75	48
Over three ton to four ton capacity	2.40	2.25	48

* All men hired in Winnipeg to go into the country to work on buildings shall be paid the city schedule rate excepting where other definite agreements are made.

(*a*) At least 25 per cent of the men employed on any contract shall be paid the rate for skilled men.

(*b*) For wood lathers, work may be paid for on a square yard basis at not less than 6 cents per square yard.

(*c*) Engineers in charge of hoisting engines of three drums or more operating any type of machine; or operating trenching machines, clamshells or orange peels, regardless of capacity; or operating steam shovels or draglines of one yard capacity or over; or operating drop hammer pile drivers; in all cases irrespective of motive power.

(*d*) Engineers in charge of hoisting engines having only two drums or of single drum if used on a building of three stories and over, used in handling building material; or steam shovels and draglines not specified in Class "A" hereof; irrespective of motive power.

(*e*) Engineers in charge of any steam operated machine not specified in class "A" or "B" hereof; or in charge of a steam boiler if the operation of same necessitates a licensed engineer under the provisions of "The Steam Boiler Act"; or air compressor delivering air for the operation of rivetting guns on steel erection work, or pumps in caissons, or concrete mixers of over 1/3 yard capacity; irrespective of motive power.

(*f*) Operators of gas or electric engines for machines not otherwise specified in class "A", "B" or "C" hereof, or men firing boilers, of machines classified in class "A", "B" or "C" hereof or assisting engineers in charge of same.

(*g*) If employed on the construction or demolition of the building by owner, contractor or sub-contractor.

Saskatchewan

Under the Minimum Wage Act, an Order in Council extended the operation of the Act to male as well as female employees in shops and factories. The minimum wage rates effective thereunder are shown in Table V—Minimum Wage Rates for Female Employees in Saskatchewan.

The Coal Mining Industry Act of Saskatchewan which was proclaimed in force on April 15, 1935, empowers the Lieutenant Governor in Council to regulate hours of labour and minimum wages for the persons employed in the industry.

The Public Service Vehicles Act of Saskatchewan as amended, grants the Highway Traffic Board the power to regulate the wages and hours of drivers of public service and commercial vehicles. No regulations under this Act have been issued.

Alberta

The Factories Act, 1926, provides that wherever a minimum wage has been fixed for female workers in any class of employment, no male worker (except indentured apprentices) may be employed in such class of employment at a less wage. (The table on minimum wage rates for women in Alberta is given above.)

A Male Minimum Wage Act was passed by the Alberta legislature at its session February 6 to April 7, 1936, and was amended in the session August 25 to September 1, both the Act and its amendment coming into force by proclamation November 2, 1936. The Act, as amended, which is similar to the Male Minimum Wage Act of British Columbia, applies to all male persons engaged in any industry, trade or business except farm labourers and domestic servants. It is to be administered by the Board of Industrial Relations appointed under the Hours of Work Act, which Board is authorized to issue orders fixing wage rates, hours of labour, overtime pay, etc. No orders had been issued under this Act at the end of the year.

The *Public Service Vehicles Act* which came into force May 1, 1936, gives to the Highway Traffic Board power to regulate hours of employment and wages of drivers of public service and commercial vehicles.

Under this Act, the Highway Traffic Board issued an order, effective December 15, 1936, by which a driver of a taxicab or livery must be paid a minimum of $15 per week for a week of six days, or if employed otherwise than by the week, he must be paid not less than at the rate of $15 for 6 days.

British Columbia

Under the Female Minimum Wage Act 1934, it is provided that where a minimum wage has been fixed for employees in any industry, business, trade or occupation, no male person over 18 years of age may be employed in such work usually done by female employees at less than the minimum wage fixed for such female employees. Similarly where such a rate has been fixed for female employees under 18 years of age, no male employee under 18 years may be employed at a less wage. The table showing minimum rates for female employees in British Columbia is given above.

Under the Male Minimum Wage Act, 1934 (Labour Gazette, June, 1934, page 510), minimum rates of wages in various industries and occupations have been established by the Board of Industrial Relations. This Act applies to all employees and their employers in any industry, business, trade or occupation except farm labourers and domestic servants. In the case of handicapped, part-time and apprenticed employees, the Board may authorize the payment of a wage less than the fixed minimum rate, and also may define the number of such employees to whom wages lower than the minimum may be paid. In 1935, an amendment to the Act authorized the Board to establish minimum wages and working conditions for male employees under 21 years of age. The following table shows rates in effect under regulations made under the Male Minimum Wage Act:

MINIMUM WAGE RATES FOR MALE EMPLOYEES IN BRITISH COLUMBIA

Industry	Wages per hour
	$
Logging Industry (includes the cutting of poles, ties, shingle-bolts, mining-props and piles, and all operations in or incidental to driving, rafting and booming) *(a)*:	
Cook and bunk-house occupations	2.75 per day
Making of shingle bolts (felling, bucking and splitting)	1.30 per cord
Grade and track occupations—	
East of Cascade Mountains and that portion of the basin of the Skeena River lying east of the mouth of and including the Khyex River	.35
Rest of the province	.37½
All other employees—	
East of Cascade Mountains and that portion of the basin of the Skeena River lying east of the mouth of and including the Khyex River	.35
Rest of province	.40
Sawmill Industry (includes sawmills and planing mills): *(a)*	
Male persons 21 years or over *(b)*	.35
Male persons under 21 years	.25
Shingle Industry (excludes shingle-bolt operations)	.40
Box Manufacturing Industry (wooden boxes, barrels, kegs, casks, tierces, pails and other wooden containers):	
Male persons 21 years or over *(b)*	.35
Male persons over 18 and under 21 years of age	.25
Male persons under 18 years	.20
Woodworking Industry (includes the making of sash and doors, cabinets, show cases, office and store fixtures, wood furniture, wood furnishings, veneer products and general millwork):	
Male persons 21 years and over	.35
Male persons over 18 and under 21 years of age	.25
Male persons under 18 years	.20
Baking Industry (manufacture and delivery of bread, biscuits and cakes):	
Male persons, 21 years and over	.40
Male persons of 18 years of age	.25
Male persons of 19 years of age	.30
Male persons of 20 years of age	.35
Fruit and Vegetable Industry (includes all canning, preserving, drying, packing, etc., of any kind of fruit, vegetable or seed): *(c)*, *(d)*	
Tomato Canning—	
Male persons 21 years and over	.35
Male persons under 21 years	.25
All other canning, preserving, drying, packing, etc.—	
Male persons 21 years and over:	
Hours up to 10 hours in any one day	.35
Hours in excess of 10 and up to 12 hours in any one day	.52½
Hours in excess of 12 hours in any one day	.70
Male persons under age of 21 years:	
Hours up to 10 hours in any one day	.25
Hours in excess of 10 and up to 12 hours in any one day	.37½
Hours in excess of 12 hours in any one day	.50
Construction Industry:	
In Vancouver, Victoria, New Westminster, Nanaimo, Prince Rupert, Esquimalt, Oak Bay, Saanich, West Vancouver, Burnaby and North Vancouver:	
Male persons, 21 years and over	.45
Male persons over 18 and under 21 years of age	.35
Rest of province:	
Male persons 21 years and over	.40
Male persons over 18 and under 21 years of age	.30
Carpentry Trade (except indentured apprentices), (construction or alteration of buildings and structures), in Victoria and defined district in southerly part of Vancouver Island	.70
Shipbuilding (e):	
Male persons of any age employed as ship-carpenters, shipwrights, joiners, boat builders, or wood-caulkers	.67½
All other male persons of any age	.50
Transportation Industry (other than by rail, water or air):	
Male persons of any age: *(f)*, *(j)*	
Operators of motor-vehicles of 2,000 pounds net weight or over and of horse-drawn vehicles (other than bread or milk retail deliverymen):	
Week of not less than 40, and not more than 50 hours	.40
Week of less than 40 hours	.45
For every hour in excess of 50 and up to and including 54 hours per week	.60
Operators of motor-vehicles of less than 2,000 pounds net weight (other than bread or milk retail deliverymen and motor-cycle drivers):	
Week of not less than 40 and not more than 50 hours	.35
Week of less than 40 hours	.40
For every hour in excess of 50 and up to and including 54 hours per week	.52½
Motor-cycle operators:	
Week of not less than 40, not more than 48 hours	.25
Week consisting of less than 40 hours	.30
Bicycle riders and foot messengers employed exclusively on delivery or messenger work (but not those employed exclusively by wholesale or retail trade establishments):	
Week of not less than 40 and not more than 48 hours	.17
Week of less than 40 hours	.20

MINIMUM WAGE RATES FOR MALE EMPLOYEES IN BRITISH COLUMBIA—*Continued*

Industry	Wages per hour
	$
Transportation Industry (other than by rail, water or air):—*Concluded*	
Male persons of any age: *(f), (j)—Concluded*	
Swampers and helpers:	
Week of not less than 40 and not more than 50 hours	.35
Week of less than 40 hours	.40
For every hour in excess of 50, up to and including 54 hours per week	.52½
Drivers of retail milk or bread delivery vehicles	.40
Bus Drivers in Victoria, Esquimalt, Oak Bay and Saanich:	
Male persons of any age in charge of or driving motor vehicle with seating accommodation for more than 7 passengers used as a public conveyance for which service a charge is made—	
Week of not less than 40 and not more than 50 hours	.45
Week of less than 40 hours	.50
Every hour in excess of 9 hours in any one day or 50 hours in any one week	.67½
Taxicab Drivers of any age in Vancouver, Victoria, Esquimalt, Oak Bay and Saanich *(j)*	2.50 per day
Mercantile Industry (wholesale and retail establishments): *(g)*	
Male persons, 21 years and over, for week of 37½ hours or more	15.00 per week
Male persons, 21 years and over, for week of less than 37½ hours	.40 (minimum of 1.60 in any day)
Male persons 21 years and under 24, inexperienced or partly experienced, with permit from the Board, for week of 37½ hours or more	9.00 per week 1st 6 months to 13.00 per week 3rd 6 months
Male persons, 21 years and under 24, inexperienced or partly experienced, with permit from the Board, for week of less than 37½ hours	.24 1st 6 mths. to .35 3rd 6 months (minimum of .95 in any day 1st 6 months to 1.40 in any day 3rd 6 months)
Male persons, 18 and under 21 years, inexperienced or partly experienced, with permit from the Board, for week of 37½ hours or more	8.00 per week 1st year to 13.00 for 3rd year
Male persons, 18 and under 21 years, inexperienced, or partly experienced, with permit from the Board, for week of less than 37½ hours	.21 1st year to .35 for 3rd year (minimum of .85 in any day 1st year to 1.40 in any day 3rd year).
Male persons, 18 and under 21 years employed not more than 5 days a month	.30 (minimum of 1.20 in any day)
Male persons commencing under 18 years, for week of 37½ hours or more	6.00 per week if under 17 years to 13.00 for age 20
Male persons commencing under 18 years, for week of less than 37½ hours	.16 if under 17 years to .35 for age 20 (minimum of .65 in any day if under 17 years to 1.40 in any day for age 20)
Stationary Steam Engineers (i):	
With certificate of competency under Boiler Inspection Act, where required	.50
With special or temporary certificate or where certificate of competency not required	.40
Barbering (excludes beauty-parlours or hairdressing shops patronized by women and children only):	
Week of 40 hours or more	15.00 per week
Week of less than 40 hours	.40
Elevator Operators:	
Male operators over the age of 18 years:	
Week of 40 hours or more	14.00 per week
Week of less than 40 hours	.37½ (minimum 1.50 in any one day)
First Aid Attendants (male) of any age with certificate of competency (assistant first aid attendants to be paid *pro rata;* overtime for first aid attendants 50 cents per hour)	4.00 per day

MINIMUM WAGE RATES FOR MALE EMPLOYEES IN BRITISH COLUMBIA—*Concluded*

Industry	Wages per hour
	$
Janitors (including janitors, janitor-cleaners or janitor-firemen):	
Janitor residing on premises, apartment building of over 50 suites *(h)*	125.00 per month
Janitor residing on premises, apartment building of not more than 50 and not less than 25 suites *(h)*	100.00 per month
Janitor residing on premises, apartment building of not more than 24 and not less than 13 suites *(h)*	75.00 per month
Janitor of apartment building of less than 13 suites for each hour of work actually performed according to a written agreement between employer and janitor	.35
All other janitors	.35

(a) Watchmen employed in camps where operations are entirely suspended are exempt from these minimum wage orders. In British Columbia Census Division No. 1 (southeast mountain area) a maximum sum of $1.25 per day for board and lodging may be deducted from wages.

(b) A number not exceeding 10 per cent of the total number of employees over 21 years of age may be employed at less than the minimum rate, but at not less than 25 cents per hour.

(c) The number of male persons paid at wage rates less than the minimum for male persons over 21 years shall not exceed 15 per cent of the whole number of male employees of any age.

(d) Employees packing or sorting products damaged by frost where such packing and sorting was done by the grower were exempt from the order from December 5, 1935, to March 31, 1936.

(e) Male persons under 21 years may be paid a minimum of 25 cents, providing the number receiving less than the regular minimum rates does not exceed 10 per cent of the total number of male employees of any age.

(f) If vehicle is owned by the employee, all reasonable costs of operation are to be paid by the employer. Waiting time is to be paid for at regular rates.

(g) Persons selling Christmas cards by personal or door to door canvas were exempt from September 3, 1936 to December 31, 1936. Where the employee provides his own bicycle, all reasonable costs of operation while used in the employer's service are to be paid by the employer. Regular employees working less than 37½ hours during the week ending December 26, 1936, on account of two holidays in that week were not required to be paid the higher hourly rate. For the week ending December 19, 1936, all male employees of any age working more than 48 hours were to be paid time and one quarter for such overtime work.

(h) Not more than $20 per month may be deducted from wages as rent for a suite of 2 rooms and bath, not more than $5 for each additional room; not more than $4 per month may be deducted for electricity and gas where no meters are installed.

(i) This order does not apply to steam engineers in apartment buildings who are to receive wages not less than those fixed for janitors.

(j) Uniforms, if required, are to be furnished free of charge by the employer.

Wages and Hours of Labour under Collective Agreements and Schedules of Wages and Hours made Obligatory by Order in Council in Certain Provinces

In certain provinces, legislation provides that the wage rates and hours of labour agreed upon by representatives of employers and workers in a trade or industry for a locality, district or the whole province may be made obligatory by Order in Council on the recommendation of the Minister in charge of the administration of labour legislation. Such rates of wages and hours of labour are noted below and are applicable to both male and female workers unless otherwise stated.

Nova Scotia

Industrial Standards Act of Nova Scotia

The Industrial Standards Act of Nova Scotia was enacted in the session of the Nova Scotia Legislature March 10 to May 2, 1936. The Act, which was summarized in the Labour Gazette, July 1936, page 604, is similar to the Industrial Standards Act of Ontario as noted below under "Industrial Standards Act of Ontario." It is, however, restricted to the building and construction industry in Halifax and Dartmouth and excludes employees of the provincial government or municipalities and also excludes any employee performing temporary work or service the total amount of which does not exceed one hundred dollars.

Four schedules were made binding by Orders in Council dated September 1, 1936, fixing wage rates and hours as follows:

	Minimum hourly wage rate	Hours per week
	$	
Bricklayers, Halifax and Dartmouth...	.97½	44
Carpenters, Halifax and Dartmouth...	.60	44
Electrical workers, Halifax and Dartmouth.....	.80	44
Plumbers and Steamfitters, Halifax and Dartmouth.....	.75	44

Provision is made in all schedules for extra pay for overtime.

Quebec

Collective Labour Agreements Extension Act

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the Labour Gazette, May 1934, page 417, and amendments to the Act were summarized in the issues of June, 1935, page 526, and July, 1936, page 607. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette,* and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The agreements apply to both male and female employees unless otherwise stated, but many of the agreements provide that in no case may the wage rates for female workers be less than stated in an order of the Minimum Wage Board. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the Labour Gazette beginning in the issue of June, 1934.

Baking Industry.—Agreements approved by Order in Council, as to wages and other working conditions in the baking industry and for bakery deliverymen provide for the following minimum weekly wage rates and maximum hours: Quebec—bakers $19 to $22, apprentices $6 for beginners, bakers of doughnuts and rolls $8 to $20, which rates may be reduced 15 per cent outside a 15 mile radius from the City of Quebec and Levis, hours 72 per week, (Labour Gazette, February, June, November, 1935, January and May, 1936); delivery salesmen, Quebec, $15, helpers $6, deliverymen (not salesmen) $10, which rates may be reduced 10 per cent outside a 15 miles radius

from the City of Quebec and Levis, hours 72 per week, (Labour Gazette, July, 1935, February, April and May, 1936). Three Rivers—bakers $15 to $22, apprentice bakers $5 to $10; delivery salesmen $9 plus a commission of 7 per cent on money collected, helper (permitted only with a handicapped regular man) $5 (Labour Gazette, February, May and October, 1935, January and March, 1936). Sherbrooke—bakers $13 to $20, apprentices $6 (Labour Gazette March, 1935). Montreal—men in charge of the oven, the dough or the pastry $22, journeymen bakers, helpers and labourers $18, apprentices $10 to $12, a 60 hour week for inside workers; salesmen $15; (Labour Gazette, August and October, 1935, January and April, 1936). Hull—bakers $12 to $28, confectioners $20, apprentices $6 to $12; hours 60 per week (Labour Gazette, June and October, 1935).

Fur Industry, Montreal and District.—An Order in Council which was summarized in the Labour Gazette, June and November, 1936, provides for the following minimum weekly wage rates in the district comprising the Island of Montreal and the area within 50 miles of it: Cutters—first class $35, second class $28; operators (male)—first class $28, second class $20; operators (female)—first class $20, second class $15; finishers (female)—first class $18, second class $14; apprentice cutters, trimmers, blockers and nailers—first class $20, second class $12; examiners—first class $24, second class $12; finishers (male)—first class $24, second class $20. Hours: 40 per week on the Island of Montreal and a radius of 10 miles from its limits and in the rest of the district for establishments with more than three workers; 48 per week in the area within a radius of 40 miles of the first area for establishments with three workers or less.

Shoe Manufacturing, Province of Quebec.—This agreement, approved by Order in Council (Labour Gazette, September, 1934, February, 1935, January and February, 1936) applies to all *male* employees in the boot and shoe manufacturing industry throughout the province. Employees are divided into four trade classes A, B, C, and D. Classes A and B comprise skilled and semi-skilled workers on certain specified operations and are divided into experienced workers and apprentices. Class C comprises experienced boys working on certain specified operations and their apprentices. Class D comprises helpers and boys not in other classes, such as sweepers, messengers, general assistants and also on certain specified operations. Minimum hourly wage rates are as follows:—

Class	Montreal and within radius of 10 miles of Island of Montreal	Quebec and within radius of 10 miles	Other municipalities of population of 3,000 or more	Rest of Province
	cents	cents	cents	cents
Class A:				
Operators.....	40	38	34	32
Apprentices....	26	25	22	20
Class B:				
Operators.....	34	32	30	27
Apprentices....	21	20	18	17
Class C:				
Operators.....	18	17	16	16
Apprentices....	15	14½	14½	14
Class D:.....	13	12½	12½	12½

In establishments where the piece work system is in effect, it is sufficient if 80 per cent of the employees in each class (A, B, C and D) receive the minimum rates, except where minimum piece rates are established for specific operations by the joint committee under the agreement.

Men's, Boys', Youths', Children's and Juveniles' Clothing Industry, Province of Quebec.—This industry throughout the Province is covered by an agreement made obligatory by Orders in Council. (The manufacture of work shirts, overalls, mackinaw coats, etc., is not included in the agreement.) The latest Order in Council made effective a new wage scale from January 1, 1937, providing for increases in wages over the previous rates. (Under an agreement between certain employers and the union, these increased wage rates became effective in shops with the agreement, on November 1, 1936.) The province is divided into three zones: Zone I is the Island of Montreal and the area within 10 miles of its limits, Zone II is the area within 75 miles of the boundaries of Zone I, Zone III is the rest of the province. The hours are 44 per week in Zone I and 48 hours in Zones II and III.

In the coats, pants and vests departments, class AA consists of skilled cutters in all three departments; class A, of head operators and shape sewers on unbasted coats in the coat department and pocket makers and tape sewers in the vest department; class BB, of pocket makers and skilled trimmers in the coat department, back and front pocket makers, trimmers and seamers in the pants department and skilled trimmers in the vest department; class B, of fitters and offpressers in the coat department, leg pressers in the pants department, offpressers and second operators in the vest department; class C, of edge basters, second basters, shapers and top collar makers in the coat department and lining stitchers in the pants department; class D, of examiners, joiners (second operators), lining makers and

pocket tackers in the coat department, lining sewers and top pressers in the pants department, fitters in the vest department; class EE, of steam machine pressers and underpressers in the coat department and general underpressers in the vest department; class E, of choppers, lining basters, machine edge basters and undercollar basters in the coat department, pocket makers and outside seamers on boys' shorts and bloomers and juvenile pants, lining sewers and attachers on boys' shorts and bloomers and juvenile pants in the pants department; class FF, of underpressers in the pants department; class F, of armhole basters, buttonhole makers, lapel makers, sleeve makers in the coat department, buttonhole makers, fitters, inside seamers on boys shorts and bloomers and juvenile pants and trimming makers in the pants department, buttonhole makers, head basters, lining makers and vee sewers in the vest department; class G, of bottom of collar and leaf of collar fellers, button sewers, canvas basters, canvas makers, coat finishers, general hands, inside coat tackers in the coat department, button sewers, examiners, finishers, fly makers, loop makers, pocket sergers and tackers in the pants department, brushers, button sewers, examiners, finishers, general hands, ticket sewers in the vest department; class H, of buttonhole tackers, fellers of bottom sleeve linings, pocket closers, sleeve lining tackers, ticket pocket makers, apprentice cutters and trimmers in the coat department, buttonhole tackers and cleaners in the pants department and buttonhole tackers and cleaners in the vest department; class K, of basting pullers (male).

Where piece work rates are in effect, the following increases on the rates in force on October 1, 1936, are to apply: 5 per cent for classes A, B, C and D, 10 per cent for classes E. F. G and for offpressers, fitters and choppers, 15 per cent for seam and steam pressers. Manufacturers who employ contractors are to increase the prices paid to said contractors in accordance with the aforementioned increases.

In the manufacture of odd pants, that is those which are not intended to be part of suits and which are intended to be sold only to retail and wholesale establishments, the following minimum rates apply:—

MINIMUM HOURLY WAGE RATES IN MANUFACTURE OF ODD PANTS

Class	Zone I	Zone II	Zone III
	cents	cents	cents
Skilled cutter	68	61	59

Women's Cloak and Suit Industry, Province of Quebec.—The Orders in Council approving the agreement for this industry govern conditions throughout the Province in the production, for women and girls over 14 years, of cloaks, coats, suits and of woollen skirts (Labour Gazette, December, 1935, March and April, 1936). The hours are 40 per week.

The following minimum wage rates must be paid employees working by the week:—

Class	Wages per hour
	cents
Fully skilled cutters	80
Semi-skilled cutters	55
Trimmers	60
Fur tailors	65
Assistant fur tailors	44
Button sewers, general hands and examiners	34

In the following crafts, work may be done on a piece work basis and piece rates are to be computed to yield the following minimum wage rates:—

Class	Wages per hour
	cents
Jacket, coat and reefer operators	80
Top pressers	80
Machine pressers	80
Under pressers	75
Piece pressers	45
Lining makers	42
Finishers	42
Skirt makers	42
Machine basters, hand basters and special machine operators	44
Semi-skilled operators	55

*A new schedule of wages is to come into effect February 1, 1937.

Skilled female operators' rates to be 20 per cent below the skilled male operators' minimum, and female semi-skilled operators 10 per cent below the semi-skilled male operators' minimum, except that if productivity is equal to male operators or if performing the same operation on piece work as a male operator, the same wage rates apply to both male and female operators. Female section operators to be paid the same rates as male section operators.

The Board of Examiners may determine a special rate for employees whose production is under normal.

Apprentices are limited to 5 per cent of the number of those employed in a factory. Apprentice operators, pressers and cutters to start at $7 per week, with advances every six months to a minimum of $22 at the end of three years.

Glove Industry, (Fine Gloves) Province of Quebec.—The agreement approved by the Order in Council for this industry covers the entire province (Labour Gazette, June and September, 1936). The hours are limited to 49 per week. The wage rates specified in this agreement are piece work rates. For work in towns of a population of less than 15,000, the standard minimum piece rates are reduced 10 per cent for the majority of operations.

Glove Industry (Work Gloves) Province of Quebec.—This agreement, approved by Order in Council and summarized in the Labour Gazette, September, 1936, covers glove cutters (work gloves) throughout the province. The wage rates are piece rates, which may be reduced by 10 per cent in towns of a population of 15,000 or less. Hours are 48 per week.

Women's and Children's Millinery Industry, Montreal and District.—The agreement approved by Order in Council for this industry (Labour Gazette, August, 1935 and March, 1936) covers the Island of Montreal and an area within a distance of 50 miles from its limits. Hours are 40 per week. Wages per week for qualified operators are: hand blockers $31; straw operators, fabric operators, blockers and cutters $28, drapers $19, trimmers $14. Workers not yet qualified may be paid at rates fixed by the Joint Committee until they are qualified, but not more than 25 per cent of employees in a certain class of work in any establishment may be paid at less than the above minimum rates.

Furniture Workers, Province of Quebec.*—The Order in Council making obligatory the agreement in this industry throughout the Province is summarized in the Labour Gazette, November and December, 1935 and September, 1936. The province is divided into

three zones: Zone I comprises the Island of Montreal, Zone II the province with the exception of Zones I and III, Zone III comprises the county of Chicoutimi and municipalities of a population of less than 3,000 provided the establishments in this zone do not employ more than 50 workers. The minimum wage rates are: for labourers over 21 years of age—25 cents per hour in Zone I, 22 cents in Zone II and 20 cents in Zone III; for boys of 16 years of age and over—12 cents per hour during first year, 14 cents during second year, 16 cents during third year, 18 cents during fourth year and 20 cents during fifth year. For female employees the minimum rate is 16 cents per hour. Lower rates may be paid workmen whose capacity is reduced, but in no case to be less than 80 per cent of the regular minimum rate, and not more than 5 per cent of staff may be paid at rates under the standard rate.

Printing Trades, Quebec and Chicoutimi.—The Order in Council extending an agreement as to wages and working conditions in the printing trades in the judicial districts of Quebec, Beauce and Montmagny (Labour Gazette, November 1935) provides for a 48-hour week for day work and a 45-hour week for night work. Minimum wage rates in the judicial district of Quebec for journeymen typographers, pressmen, stereotypers and bookbinders; $25 per week for day work and $27 for night work. In the judicial districts of Beauce and Montmagny these rates may be reduced 15 per cent.

For the judicial districts of Chicoutimi, Lake St. John, Roberval and Charlevoix-Saguenay, the Order in Council (Labour Gazette, October, 1936) provides for a 40-hour week. The minimum wage rate for journeymen typographers, pressmen, bookbinders and stereotypers is 52 cents per hour, with a 10 per cent reduction on this rate for work in municipalities of a population of less than 2,000.

Printing Trades, Montreal and District.—The Orders in Council covering the printing trades with the exception of work on daily newspapers and certain work in job offices, in Montreal and district, which were summarized in the Labour Gazette, June and December, 1936, include in their jurisdiction the Island of Montreal and the area within 100 miles of its limits. It is divided into four zones, of which Zone I comprises the Island of Montreal and within 10 miles of its limits, Zone II the municipalities of Three Rivers, Sherbrooke, Sorel, St. Hyacinthe, Valleyfield, Joliette, Granby, Saint Jean d'Iberville, Laprairie, St. Jerome and within 2 miles of their limits, Zone III the remainder of the area, and Zone IV is made up of establishments owning and printing a weekly or semi-weekly newspaper in the territory comprising Zones II and III. The hours are 48 per week. Minimum weekly wage rates are shown in the accompanying table.

Ornamental Iron and Bronze Workers (Shopmen), Montreal and Quebec.—For the Island of Montreal and neighbouring counties, an Order in Council made obligatory an agreement which stipulates a minimum wage rate of 60 cents per hour for mechanics, 50 cents for fitters and 40 cents for helpers. Hours are 44 per week (Labour Gazette, September, 1935, and July, 1936).

For the judicial districts of Quebec, Beauce and Montmagny, an Order in Council (Labour Gazette, February, 1935, and January, 1936)

provides in the judicial district of Quebec for minimum wage rates of 50 cents per hour for mechanics, 40 cents for adjusters and 30 cents for helpers. Hours are 50 per week. In the judicial districts of Beauce and Montmagny, these rates may be reduced 15 per cent.

Wage rates for ornamental iron workers (erectors) in certain localities are shown in the table of building trades rates below.

Granite Cutters, Province of Quebec.—An Order in Council (Labour Gazette, May, 1936) made obligatory the terms of an agreement governing conditions in granite cutting operations in connection with buildings, bridges, curbings and monumental works throughout the province with the exception of Saint Joseph d'Alma, Victoriaville and Rimouski. Hours are limited to 45 per week except for quarrymen and inexperienced labourers who may work 50 hours per week. Minimum wages for granite cutters and surface machine operators who are fully competent granite cutters 50 cents per hour, quarrymen employed in quarries 35 cents, inexperienced labourers in quarries 25 cents, apprentice granite cutters from 10 cents per hour during first year to 30 cents during third year.

Stone Cutters, Province of Quebec, except Hull and District.—This agreement (Labour Gazette, April and October, 1935, April and May, 1936) covered wages and working conditions in limestone, sandstone, artificial stone or any other stone quarries except granite and marble quarries, and applies to operations in connection with all buildings, bridges, walls, monumental work and other operations, throughout the whole province except county of Hull and five neighbouring counties. Hours 44 per week. Wages per hour: stonecutters 50 cents, apprentice stonecutters from 15 cents during first year to 40 cents during fourth year.

Stonecutters, Hull and District.—The Order in Council which was summarized in the Labour Gazette, May, 1936, and applies to Hull and five neighbouring counties, provides for wage rates of 80 cents per hour for stonecutters, 25 cents to 60 cents for apprentice stonecutters, 50 cents for quarrymen and drillers, 40 cents for other quarry workers except timekeepers and water boys. Hours are 44 per week. It includes work in any quarry or in any other place where limestone or any other stone is cut, but not work on marble or granite nor the quarrying of crushed stone.

Longshoremen (Inland and Coastal Navigation), Montreal.—The agreement, which was approved by Order in Council and summarized in the Labour Gazette, May, July and August, 1936, covers the loading and unloading of all ships (except the handling of grain) engaged in inland and coastal navigation in the harbour of Montreal and the Lachine canal zone. Wage rates are 42 cents per hour for day work, 45 cents for evening work and 48 cents for night work.

Barbers.—Agreements made obligatory by Orders in Council in the barber or the barber and hairdresser trades cover several districts. The hours vary in the several localities, each agreement specifying the time shops are to be open with periods off for each employee. Piece or job rates for each piece of work in the barbering, hairdressing, manicuring trades, etc., are specified in the agreements. For barbers employed by the week, the agreements specify a minimum weekly wage and in addition provide that barbers receive a certain percentage of their individual receipts above a specified amount taken in during the week. The following minimum wage rates for barbers and hairdressers are payable in the following centres and in their surrounding districts:

MINIMUM WEEKLY WAGE RATES FOR BARBERS AND HAIRDRESSERS

(k) And for all contracts of $10,000 or more in the rest of the district.

(l) 15 cents per hour extra for personal services.

(m) And in the rest of the district for contracts of $15,000 or over.

(n) For all contracts under $15,000.

(o) For contracts of $10,000 or less.

(p) For contracts over $10,000.

(q) And in the rest of the district for all contracts of $2,000 and over.

(r) For contracts of less than $2,000.

(s) For contracts of less than $10,000.

Building Trades.—The agreements in the building trades in various sections of the province, which have been made obligatory by Orders in Council, have been summarized in the Labour Gazette during 1934, 1935 and 1936. In most cases the agreements cover specified sections of the province, comprising several counties as well as the principal city. Building trades agreements which are in effect under these Orders in Council cannot apply to the agricultural industry. The minimum wage rates which were in effect at the end of the year 1936 under Orders in Council are shown in the accompanying table.

The agreements in many cases also specify minimum weekly rates, lower than the standard hourly rates, for workmen permanently employed on maintenance work for churches, chapels, seminaries, colleges, convents, monasteries, hospitals, orphanages, asylums or other charitable institutions or in manufacturing establishments. These weekly rates are not shown in the table. Minimum wage rates for apprentices which are set in many of the agreements are also omitted from this table.

Ontario

The Industrial Standards Act of Ontario

The Industrial Standards Act of Ontario, the text of which was printed in the Labour Gazette, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, convene or authorize an officer to convene a conference or series of conferences of employees and employers in the industry, in any zone or zones to investigate the conditions of labour and practices in such industry and to negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If in the opinion of the Minister a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force during pleasure or for the period, not exceeding twelve months, stipulated in the schedule, and thereupon such schedule shall be binding upon every employee or employer in such industry in the whole or any part of the Province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. The following is a summary of the wage rates in effect under these Orders in Council at the end of the year 1936:

Logging Industry, Port Arthur Forestry Division.—A schedule was in effect for the period March 24, 1936, to October 1, 1936, which provided for minimum wage rates (in addition to board and lodging) of $35 per month for cooks and kitchen staff, $37.50 for general bushmen, $40 for loaders, $45 for teamsters, $2.25 per day for river drivers. Piece rates were set for pulpwood cutters, and for these workers a maximum of 75 cents per day might be charged for board and lodging.

Baking Industry.—A schedule which was in effect under Order in Council from September 24, 1935, until August 6, 1936, provided that in the baking industry, in the Counties of Waterloo, Wellington, Perth, and Huron, the hours would be 56 per week with minimum weekly wage rates of $22 for foremen, $20 for oven men and table hands, $15 for bakers' helpers, $10 for pan boys or apprentices, $17 for salesmen or bread drivers.

Another schedule which came into effect December 8, 1936, provides that in this industry in Ottawa and surrounding district, the regular working week be of 56 hours with the following minimum weekly rates: $21 for cakemakers, dough makers, machine operators, bench hands and oven men, $18 for bakers' helpers, bread room checkers, bread salesmen or drivers and for fourth year apprentices, $16 for third year apprentices, $14 for second year apprentices, $12 for oven boys and first year apprentices.

Brewing Industry.—This schedule is in effect throughout the Province and provides for a regular working week, between April 1 and September 30 of 50 hours, except transport drivers whose week is 54 hours. Between October 1, and March 31, the regular working week is 45 hours. Minimum weekly wage rates are: coopers $30; truck drivers $25; helpers $22.50; bottlers, operating machines, $24.50; other bottlers $22.50; watchmen, fermenting room and cold storage, brew house, washhouse $24.50.

Men's, Boys' and Youths' Clothing.—The schedule which regulates this industry throughout the province applies to the manufacture of men's, boys' and youths' pants, coats, vests and suits, etc., except work shirts, overalls, mackinaw coats, etc., and except clothing for infants and children up to the age of 6 years.

The following wage rates apply to the counties of Ontario: York, Peel, Halton and Wentworth. In the remainder of the province

these minimum rates are reduced by 12½ per cent.

Minimum hourly wage rates for employees of "stock manufacturers": Class A (skilled cutter and head operator) 70 cents; class B (finish presser) 65 cents; class C (pocket operator and front pocket and back pocket maker on pants) 62 cents; class D (skilled trimmer, edge taper, 1st operator on vests and 2nd operator on vests) 61½ cents; class E (shaper and leg and bottom presser on pants) 60 cents; class F (seamer on pants, top stitcher on pants, lining maker on pants, waistband maker on pants, fitter, under-baster, top collar baster and finish presser on vests) 57 cents; class G (lining maker, edge stitcher, joiner and pocket tacker, shoulder joiner, general operator, gorge sewer, fitter on vests, top presser on pants and chopper) 50 cents; class H (edge presser, edge baster by hand, lining baster, facing baster by hand, collar setter, and examining brusher) 45 cents; class I (shoulder and undercollar baster, alteration tailor, seam presser, under presser and back presser on vests, pocket maker and outside seamer on boys longs, shorts and bloomers and lining sewer and stitcher on boys' shorts, longs and bloomers) 41 cents; class J (sleeve maker and separator of coats) 37 cents; class K (buttonhole maker, machine; edge baster, machine, fitter on pants, trimming maker on pants, seam presser on pants, separator of vests and ticket pocket maker) 35 cents; class L (facing and bottom tacker, special machine operator, lapel and collar padder, facing baster, machine, armhole serger, lining and back maker on vests, operator on vests, baster on vests and separator of pants) 33 cents; class M (canvas baster, machine, special machine operator on pants, buttonhole maker, hand, canvas baster, hand, finisher and button sewer) 31 cents; class N (bottom trimmer on pants, thread marker, canvas maker, machine, buttonhole tacker, binder, cleaner and basting puller, pocket and piecer on vests, general helper and busheller on pants) 28½ cents.

Minimum hourly wage rates for employees of "odd pants manufacturers": class A (skilled cutter) 68 cents; class B (front and back pocket maker, trimmer, lining stitcher, leg presser and top presser) 50 cents; class C (lining sewer and seamer) 43 cents; class D (pocket maker on boys' longs, shorts and bloomers and lining sewer and stitcher on boys' longs, shorts and bloomers) 41 cents; class E (chopper for odd pants) 40 cents; class F (fitter, underpresser, trimming maker, buttonhole maker and seamer on boys' longs, shorts and bloomers) 33 cents; class G (fly maker, pocket serger, tacker, button sewer, loop maker, finisher, examiner, cleaner and buttonhole tacker) 28½ cents.

Any employer may submit to the advisory board the name of any employee who has less than the average skill and ability, and the board may set a special wage rate for such employee for a defined period. In the case of employees performing more than one operation they are to receive the wage rate for the highest classification of work they perform, unless a special rate is fixed by the advisory board.

Women's Cloak and Suit Industry, Province of Ontario.—The schedule made binding by Order in Council under the Act for the women's cloak and suit industry, that is the manufacture, for females, of cloaks, coats or suits and of woollen skirts of specified weight was summarized in the Labour Gazette, December, 1935, and was in effect until November 18, 1936. The terms of this schedule relating to working hours and minimum wage rates were the same as in the agreement which is in effect in the Province of Quebec and is summarized above under "The Collective Labour Agreements Extension Act," except that the provisions relating to apprentices are not in the Ontario schedule, and except that the Board set up under the Industrial Standards Act is to determine rates for handicapped workers.

Millinery Workers, Province of Ontario.—The manufacture of millinery throughout the province is governed by this schedule. Retail custom millinery is exempt from the provisions.

Minimum wage rates per week in Toronto and within 50 miles of its limits; class A (hand blockers) $32, class B (blockers, pouncers and buffers, operators, cutters) $29, class C (drapers) $19, class D (trimmers and preparers) $15. For establishments situated more than 50 miles from the limits of the city of Toronto, these minimum rates may be reduced by 12½ per cent. A special wage rate may be fixed by the Advisory Board for any employee whose skill and ability is found by the Board to be below the average. The Board may also fix a special wage rate for any employee performing more than one operation or who does work partially covered by this schedule and partially not so covered. Hours are 40 per week.

Furniture Industry, Province of Ontario Except Toronto.—Under the schedule made binding for this industry, which was in effect until July 1, 1936, and which applied to the manufacture of all wood products known as household, office and school furniture (Labour Gazette, August, 1935), two zones were set up: Zone "A" consisted of the whole province except the city of Toronto and an area 15 miles from its limits and except the district bounded by the cities of Hamilton, Kitchener and Stratford; Zone "B" consisted of the area bounded by the cities of Hamilton, Kitchener and Stratford. Hours were 47 per week.

Class of employee	Wages per hour	
	Zone "A"	Zone "B"
	cents	cents
Skilled employees	45	47
Semi-skilled employees	35	37
Unskilled male labour over 21 years:		
From September 1, 1935, to March 1, 1936	28	30
From March 1, 1936, to July 1, 1936	30	32
Boys	17	17

Barbering Trade.—Two schedules have been made binding by Orders in Council for the barbering trade. In Toronto and in Windsor, the minimum wage rate for barbers employed on a weekly basis is $20 per week, or if not regularly employed, $3 per day except Saturday or a day preceding a holiday, for which the minimum is $5. If employed for less than a full day, 60 cents per hour is to be paid with a minimum of 3 hours' pay. For barbers employed on a percentage basis, rates are stipulated in each city.

Building Trades.—Schedules governing wage rates and hours in the building trades in various localities, which are in force under the Act, have been summarized in the Labour Gazette during 1935 and 1936. The schedules apply to the immediately surrounding district as well as to the city named. The wage rates and hours for journeymen stated in these Orders are given in the accompanying table. (Apprentices are to be employed according to the conditions of the Ontario Apprenticeship Act.)

(a) This Schedule terminated July 10, 1936. Wood lathing done on a yardage basis was to be paid at 7 cents per square yard.
(b) This Schedule terminated July 10, 1936.
(c) This Schedule terminated August 29, 1936.
(d) This Schedule terminated December 17, 1936.
(e) This Schedule terminated May 1, 1936.
(f) This Schedule terminated December 9, 1936.

Alberta

Industrial Standards Act of Alberta

This Act is similar to the Industrial Standards Act of Ontario which is noted above. The text of the Act was published in the Labour Gazette, June 1935, page 534, and amendment noted in the issue of June 1936, page 501. The following schedules have been made binding under this Act:

Baking Trade.—Two schedules are in effect in this trade. The schedule which governs the trade in Edmonton extends also to the surrounding district, and provides for a 54 hour week, with the following minimum weekly wage scale, effective from January 8, 1937: foreman $25.50, doughmen, ovenmen and bench hands $23, helpers, shippers and packers $18, wrappers $12.50, apprentices $12.50 first year, $14 second year, $16 third year, salesmen or deliverymen $21.

The Calgary schedule also extends to the surrounding district, with the following minimum wage scale for a 54 hour week: doughmen, ovenmen and bench hands $21.50, helpers, shippers and packers $15, wrappers $12.50, apprentices $8 first six months, $10 second six months, $12.50 second year and $15 third year; salesmen or deliverymen (experienced) $19.50, (inexperienced first three months) $16.50.

Brewing Industry.—This industry throughout the Province is regulated by a schedule which provides for a 44 hour week (with certain exceptions in which specified longer hours are permitted). Minimum hourly wage rates are: from 71⅝ cents to 81¼ cents in brewing department ($157 per month for first cellar man); from 62½ cents to 75 cents in bottling department (except labourers for first six months 57¼ cents and first bottle yard men $145 per month); from 66⅔ to 75¼ cents for engineers and firemen $189 per month for chief engineers); general mechanics 72 cents, mechanics' helpers 62½ cents.

Building Trades.—Schedules governing certain building trades in the cities of Edmonton, Calgary and Wetaskiwin, and in the district surrounding the City in each case, have been summarized in the Labour Gazette, April, July, September and November, 1936. The minimum wage rates and hours in effect under such schedules are shown in the accompanying table. Provision for apprentices' wages is made in some cases but not shown in this table.

MINIMUM WAGE RATES AND MAXIMUM HOURS FOR CERTAIN BUILDING TRADES, AS APPROVED BY ORDERS IN COUNCIL UNDER THE INDUSTRIAL STANDARDS ACT OF ALBERTA

Trades	Edmonton		Calgary		Wetaskiwin	
	Wages per hour	Hours per week	Wages per hour	Hours per week	Wages per hour	Hours per week
	$		$		$	
Bricklayers					.90*a*	44
Carpenters	.75	44			.60	44*b*
Labourers					.40	44*b*

(a) From January 1, 1937.
(b) 48 hours outside the city.
(c) 10 cents per hour extra for work 15 miles or more from city.

Department of Trade and Industry Act of Alberta

Under the provisions of the Department of Trade and Industry Act, 1934, a code of Fair Competition and Business Practice and Schedule of Prices for the Printing Industry was approved by the Minister of Trade and Industry, on petition of the members of the commercial printing industry in the province, and with the regulations was approved by Order in Council on October 9, 1936.

The code provides for a 44 hour week at regular pay except that in smaller municipalities, if necessary, permission to work up to 50 hours per week may be given by the Board of Industrial Relations.

In cities or other municipalities where agreements are in effect in the industry, between employers and Canadian or international unions, such conditions are made binding in all establishments. In municipalities where no such agreement exists, hours of labour, wages and working conditions must be submitted for approval to the Board of Industrial Relations. The wages and hours under union agreements on record in the Federal Department of Labour as being in force for job-printing establishments in Alberta are as follows: Edmonton compositors and pressmen, $37.40, 44 hours per week; Calgary, compositors $36.80, 40 hours per week and 92 cents per hour, 44 hours per week; pressmen, cylinder, $40.50, platen, $36.80, 44 hours per week; Lethbridge, compositors $37.40, 44 hours per week; Medicine Hat, compositors $35.64, 44 hours per week.

Codes for retail stores and for dyeing and cleaning require that for all employees the wages and hours under minimum wage orders shall be observed.

Maximum Hours of Labour as Limited by Provincial Legislation

Legislation on the statute books of the provinces governing various work-places such as factories, mines and shops, etc., limits the working period for certain classes of employees. This statutory regulation of hours deals, for the most part, with the working conditions of women and young persons.

In addition to the hours provisions in certain Acts, two provinces, British Columbia and Alberta, have enacted statutes establishing a uniform standard of hours in industry. In another province, Quebec, legislation has been passed to enable the working period to be shortened with a view to making possible the employment of more workers.

In British Columbia, the Hours of Work Act of 1923, was re-enacted, with amendments, in 1934. The Act sets a maximum limit of eight hours in a day and 48 in a week for persons employed in mining, manufacturing and construction and in such other industries or occupations as may be added by regulation. Up to the present time, barbering, baking, catering, drug stores, transportation, the occupations of hotel clerk and elevator operator, the mercantile industry and the soft drinks industry have been brought within the Act. The Board of Industrial Relations administering the Act may make exemptions or add other industries.

In Alberta an Hours of Work Act which came into effect on September 1, 1936, provided for an eight-hour day and a 48-hour week for female employees, and a nine-hour day and a 54-hour week for male workers. The Act applies to any establishment, work or undertaking in or about any industry, trade or occupation with the exception of farming and domestic service. It does not affect the provisions of the Coal Mines Regulation Act which provides an eight-hour day for underground workers.

Exemption from the hours limitation is made in both provinces in the case of persons holding confidential, supervisory or managerial positions.

Since June 10, 1933, an Act respecting the Limiting of Working Hours has been in force in Quebec. The Lieutenant-Governor in Council is empowered to limit the number of hours in a day or a week during which a workman employed in manual labour may work. Orders under this authority cover the building industry in St. Hyacinthe, and in the Montreal, Quebec and Eastern Townships Divisions; male and female operators in hairdressing establishments and beauty parlours on the Island of Montreal and employees in shoe repair and shoe shining parlours in the same district.

The Nova Scotia Legislature, in 1935, passed the Limitation of Hours of Labour Act relating to mining, manufacturing and construction. The kinds of undertakings to which the Act was to apply and the number of hours of work were to be fixed by a Board of Adjustment. It has not yet been proclaimed in force.

In New Brunswick, in 1936 a Fair Wage Act provided that the Board of Commissioners of Public Utilities, when directed by the Minister of Health and Labour, may establish fair rates of wages and the maximum hours for which such wages shall be paid in any trade, industry or business. Where unfair

conditions seem to exist voluntary adjustment through conferences of employers and workers may be sought.

Mining and Metallurgical Industries

Legislation has been enacted in all the provinces, except Manitoba and Prince Edward Island, providing for an eight-hour day for certain classes of miners.

In Alberta, underground workers have an eight-hour day, including the time spent going to and from the working face.

In Ontario, miners have an eight-hour day, reckoned from the time of arrival at the working face, in those parts of the province without county organization. In these areas are included all the principal mining operations in the province. The hours limitation may be extended to other parts of the province by proclamation of the Lieutenant-Governor in Council. Elevator and hoist operators in mines may not be required to work more than eight hours in any 24. In case of emergency the time may be extended by four hours in 24, for a period not longer than 10 consecutive days.

In the Yukon, the maximum working hours in underground quartz or lode mining and placer mining are limited to eight in 24 except for purposes of changing shifts or in an emergency in placer mining. In placer mining overtime may be worked under a written agreement between employer and employee except where the latter is engaged by the month.

In British Columbia, an eight-hour day is in force for workers both above and below ground in coal and metal mines. This period includes the time the underground worker takes to reach the working face. Employees in metallurgical works, including stationary engineers, also have an eight-hour day by legislation.

In Quebec, the underground employment of boys under 17 years for more than 48 hours in a week is prohibited.

In Nova Scotia, an eight-hour day is provided for underground workers. This has been extended to workers above ground by agreements between mining companies and the unions.

In Saskatchewan mines, a statutory eight-hour day is in force for all mine workers except where otherwise agreed upon by employers and employees.

In Manitoba, the Lieutenant-Governor in Council may make regulations governing hours of miners but up to the present, no action has been taken. There is practically no mineral development in Prince Edward Island.

Factories

Factory laws in the Canadian provinces limit the hours of work for women and young persons except in Alberta and British Columbia, where the Hours of Work Acts apply to all employees. Exemptions may be made, in all provinces, either by permit from the factory inspector or, in the case of the two western provinces, by the Board of Industrial Relations or by regulation.

In New Brunswick, for females, and in Ontario, for females and for boys under 16, the maximum hours are 10 in a day with a 60-hour week; in Quebec for females and boys under 18, the maximum is 10 hours daily with a 55-hour week; and in Saskatchewan for females and boys under 16 a 48-hour week.

The Nova Scotia Act imposes no limitation on hours of work under normal conditions, but in all these provinces, New Brunswick, Ontario, Quebec, Saskatchewan and Nova Scotia, provision is made for emergencies. With a permit, an extension of hours may be made in Ontario, Nova Scotia and Saskatchewan up to 12½ hours in a day and 72½ hours in a week on not more than 36 days in the year; in New Brunswick to 13½ hours in a day and 81 hours in a week for a maximum of 36 days and in Quebec to 12 hours in a day and 65 hours in a week for six weeks in the year.

In addition to these maximum hours provisions, the working period in factories is fixed for the same classes of workers. In New Brunswick the employment of women and young persons is prohibited between 10.30 p.m. and 6 a.m.; in Nova Scotia, between 9 p.m. and 6 a.m.; in Ontario between 6.30 p.m. and 7 a.m.; in Quebec between 6 p.m. and 6 a.m.; in Saskatchewan between 10 p.m. and 7 a.m. In Ontario and Quebec in emergencies the factory inspector may permit work up to 9 p.m. In these two provinces, however, women and young persons may be employed in two shifts of eight hours each, both shifts to fall between the hours of 6 a.m. and 11 p.m.

In Manitoba, the Factories Act limited the working hours of females and boys under 17 to nine in a day and 54 in a week. With permission from the inspector, the hours of females might be extended to a maximum of 12 in a day and 60 in a week for not more than 36 days in the year. There was no limit to the extension of hours for boys under 17. Work for females was prohibited between 10 p.m. and 7 a.m.

An Order of the Minimum Wage Board issued in 1936, which supersedes any conflicting provisions of the Factories Act, provides that no female and no boy under 18

shall be employed for more than eight hours in a day, or nine hours in a day if there is a half-holiday in the week, or for more than 48 hours in a week. No male person over 18 years of age may be employed in factories in Greater Winnipeg for more than 48 hours in a week, unless overtime is paid at the rate of 30 cents an hour. No person under 17 may be required to work overtime, and no male under 18 or any female may work overtime for more than three hours in a day or more than six hours in a week.

Prince Edward Island has no Factories Act.

Shops

In Alberta, shops are governed by the Hours of Work Act.

In British Columbia, the Hours of Work Act applies to all wholesale or retail establishments in the province except that temporary exemption from the 8-hour day daily limit may be granted, by Order in Council, for special purposes such as the Christmas shopping season. Except in the cities of Vancouver, North Vancouver and Victoria, the municipalities of the Districts of West Vancouver, Burnaby, Oak Bay and Saanich and the municipality of the Township of Esquimalt, the daily limit may also be exceeded by three hours on Saturday or on a day before a statutory holiday when falling on a Saturday but the total number of hours worked in any one week may not exceed 48. Persons employed in drugstores may work four hours per week in excess of 48 hours, but in no case may hours of work exceed nine in a day. These regulations came into effect on October 1, 1936, and continue until September 30, 1937.

Under the Industrial and Commercial Establishments Act of Quebec, females and boys under 18 may be employed in shops for a maximum of 60 hours in a week in towns of 10,000 population or more. For two weeks before New Year's Day or with a permit for not more than six weeks, the time may be extended up to 12 hours in a day and 65 hours in a week.

In Nova Scotia, under the Children's Protection Act, girls under 16 and boys under 14 years of age may not work in a shop for more than eight hours in a day, exclusive of meal times, or more than four hours on Saturday, with the exception of drivers, etc.

In Manitoba, under the Shops Regulation Act, women and girls over 14 and boys over 14 and under 17 years might be employed for 14 hours in a day and 60 hours in a week, with the exception of those engaged in out-of-doors work such as drivers, etc., who may be employed for a maximum of 66 hours in a week. In emergencies, the inspector might permit extension of hours for anyone over 16 years of age to 70 in a week.

By a Minimum Wage Order, however, females and boys under 18 employed in shops, stores, etc. in Manitoba may not work for more than 9 hours a day or 48 a week, except that 11½ hours may be worked on Saturday.

Under the Shops Act, boys or girls under 14 years af age, and exempt from school attendance, may be employed for a maximum of eight hours in a day and 48 hours in a week. Boys over 13 and under 14 years may be employed for two hours on school days and eight hours on holidays.

In Ontario, shops are regulated under the Factory, Shop and Office Building Act and maximum working hours in shops are the same as those for factories, that is, 10 hours in a day, and 60 a week for females and boys under 16.

Bakeshops and Bakeries

In New Brunswick and Nova Scotia, and in Quebec, employment in bakeshops is not governed by statute but large bakeries would come under the factory laws in all provinces. They are specifically included in the factories Acts of Ontario, Alberta and Saskatchewan and are subject to the hours provisions governing these establishments in the two last named provinces.

In Ontario, since 1934, the hours of adult male employees in bakeries have been limited to 56 in a week, except with written permission of the inspector, but no permission is required for overtime on Friday when a statutory or civic holiday occurs on the following Monday. No work, except that of a preliminary kind, may be done on Sunday between 7 a.m. and 1 p.m., but this prohibition does not apply to employees whose daily period of work is not more than eight hours betwen 7 a.m. and 6 p.m. and who regularly receive a weekly day of rest. Anyone working more than nine hours in one work period or during any 24 consecutive hours, must be given at least 24 hours rest period unless a special permit has been obtained.

The Manitoba Bakeshop Act limits the working hours of all employees to 12 hours in a day and 60 in a week.

Barbershops and Hair Dressing Establishments

In the Western provinces hairdressing and beauty-parlour establishments are under the Minimum Wage Acts, and working hours are limited under the authority of these statutes.

In Ontario, a "shop" in the Factory, Shop and Office Building Act includes a place where services are offered for sale and, therefore, the term would appear to cover barber-shops beauty-parlours, etc.

In Quebec, under the Act respecting the Limiting of Working Hours, an Order in Council provides a 55-hour week for male and female employees in all hair dressing and beauty-parlour establishments on the Island of Montreal The working hours must fall between 9 a.m. and 7 p.m. except on Saturdays when the time may be extended to 9 p.m.

Shoe Repair and Shoe Shine Shops

In Quebec, under the same authority, hours in these work-places, which are not governed by the Industrial and Commercial Establishments Act, are limited by Order in Council to 64 in a week, except with an overtime permit, which may extend the time by two hours in a day but not more than six hours in a week.

These work-places are also governed in Ontario and the Western provinces in the same way as barber shops.

Hotels and Restaurants

Working hours in hotels and restaurants are regulated in Alberta and British Columbia under the Hours of Work Acts and in Ontario for female workers, under the Factory, Shop and Office Building Act.

In Ontario, Quebec, Manitoba and Saskatchewan, there is statutory provision for one day's rest in seven for employees in hotels and restaurants in certain classes of towns.

In Ontario, the Act applies to cities and towns having a population of 10,000 or more.

In Quebec, Orders in Council under the One Day's Rest in Seven Act, issued in January and May, 1935, provides a weekly rest day of 24 consecutive hours or, in the Quebec District with permission of the factory inspector, two periods of 18 consecutive hours in the same week. The maximum consecutive hours which may be worked by any employee are limited to 12 in any 24 and office employees must have at least 12 hours consecutive rest. These regulations do not apply, however, to establishments employing less than 5 persons if situated in municipalities with less than 3,000 population.

In Manitoba and Saskatchewan, hotels and restaurants are governed by the One Day's Rest in Seven Acts, which apply only to cities.

Offices

In Alberta, the hours of office employees are governed by the Hours of Work Act, that is, maximum hours for females are eight a day and 48 a week and for males nine a day and 54 a week.

In other provinces persons employed in clerical work in such establishments as factories, shops, etc., would seem to come within the scope of the laws limiting hours in these work-places.

Transportation

(a) Steam:

In Ontario, a company operating a railway of 20 miles or more in length may not employ a conductor, engineer, motorman, fireman, trainman, despatcher or signalman for more than 16 hours without a rest period of at least six hours.

(b) Electric:

The Ontario Municipal Board has power to regulate hours for employees on street railways, including buses or other vehicles operated in connection with a street railway, but the statute stipulates that the hours of such persons shall not exceed 10 in one day for a maximum of six days in a week, the day's work to be performed, wherever possible, within 12 consecutive hours.

(c) Road:

Six provinces, Alberta, Manitoba, New Brunswick, Ontario, Prince Edward Island and Saskatchewan, specifically regulate the working hours of drivers engaged in passenger and incidental freight transportation.

Such drivers in Alberta may not be required to do more than nine hours of actual driving in any 24-hour period.

In an Act respecting taxicabs in Greater were set at 12 in a day for not more than six Winnipeg, the maximum hours for drivers days in a week. The Taxicab Board however was empowered to reduce these daily hours. The Municipal and Public Utility Board in Manitoba is empowered to regulate the working conditions of drivers of public service and commercial vehicles. A regulation provides maximum hours of 9 a day in driving and 12 a day in any capacity for 6 days in a week.

In New Brunswick, regulations under the Motor Carriers' Act limit working hours of drivers of motor cars, trucks and buses, etc., operated for compensation. They may not be employed for more than 10 hours in any consecutive 16, except in emergency.

In Ontario, no driver of a public vehicle may work more than 10 hours in any 24.

In Prince Edward Island, drivers of trucks and buses upon the highway may not be required to work for more than 10 hours in any 24.

Under the Public Service Vehicles Act, of Saskatchewan, the Public Utility Board may regulate hours of work for drivers of public service and commercial vehicles, not including motor vehicles carrying passengers for an electric or steam railway. Drivers of public

passenger vehicles, such as buses, may not work for more than 9 hours of actual driving in any 24-hour period.

In British Columbia, truck transportation was brought under the Hours of Work Act by regulation in June, 1935, thus giving an eight-hour day and 48-hour week to employees. Overtime, except for operators of motorcycles, bicycle riders and foot messengers employed exclusively on delivery or messenger work and milkmen, is limited to six hours in a week, but no employee may work more than 10 hours in any one day. Milkmen may work 15 hours in excess of 48 hours in a week, but over a period of seven weeks work may not be in excess of 378 hours, or more than 10 hours in any one day.

In 1936, an amendment in the Nova Scotia Vehicle Act provides that, subject to the approval of the Lieutenant Governor in Council, the Minister of Highways may make regulations governing hours of labour for drivers of commercial vehicles.

Building Trades

Under the authority of the Quebec Act respecting the Limiting of Working Hours, Orders in Council have been issued applying to the building trades. Hours of labour are limited to eight in a day and 40 a week in the Montreal Division, including the judicial districts of Montreal, Montcalm, Hull, Pontiac, Terrebonne, Joliette, St. Hyacinthe, Chambly, Iberville and Richelieu. Any contractor may adopt the two-shift system with a six-hour day and a six-day week for each shift. The two-shift system is compulsory from May 1 to October 1 on works costing more than $20,000 for the government, municipal and school corporations, fabrique or parish trustees, or on works partly financed by the government.

From May 1, 1935, building workers in the county of St. Hyacinthe were made subject to a 48-hour week with a daily maximum of eight hours.

Similar regulations to those in the Montreal Division were laid down for the Quebec Division, comprising the judicial districts of Quebec, Three Rivers, Beauce, Montmagny, Nicolet, Kamouraska, Chicoutimi, Roberval, Saguenay, Rimouski, Gaspé and Abitibi and for the Eastern Townships Division, including Bedford, St. Francis and Arthabaska. The order does not apply, however, if the total cost of the works is under $300 for the Quebec Division and under $200 for the Eastern Townships Division. From June 1, 1936, an amending order established an eight-hour day and 48-hour week in these two divisions. The two-shift system is compulsory for the same class of works during the summer season as in the Montreal Division, but in the Quebec and Eastern Townships Divisions each shift covers at least eight hours on six days a week.

Municipal Fire Departments

The Legislatures of Alberta, British Columbia, Nova Scotia, Ontario and Saskatchewan have enacted measures for regulating the working hours of persons employed by municipal fire departments. A two-platoon system is provided for in all these provinces.

In Alberta, in every place having a paid fire department all employees may have one full day off duty in every week. In cities or towns having a population of 10,000 or more, the two-platoon system is compulsory. Under this Act alternative systems are provided: either that employees have 24 hours on duty followed by 24 hours rest, or there are day and night shifts, the shifts alternating every seven days, and covering 10 hours during the day or 14 hours at night. The one full day off duty does not include periods of release at the changing of platoons.

In British Columbia, the Fire-Departments Hours of Labour Act, applying to any place where there is a paid fire department, provides that employees must have two full days off duty each week in addition to the periods off duty under the Two-Platoon Act.

In Ontario, the Fire Departments Act applies to places having a population of not less than 10,000 and a permanent fire department paid by the municipal corporation. The two-platoon system is compulsory, every employee having 24 consecutive hours off duty, not including periods of release at the change of platoons.

In Nova Scotia, in cities having not less than 30,000 population where there is a permanent fire department paid by the city, the two-platoon system comes into force when it is approved by a majority of the city council.

In Saskatchewan, in any city of 10,000 or more population having a permanent fire department paid by the city, employees have 24 consecutive hours off duty, not including periods of release at the changing of platoons, if it is so decided by by-law, the vote to be taken upon the submission, before November 1 in any year, of a petition signed by not less than one-tenth of the electorate.

Public Works

In British Columbia, provincial public works are included in the undertakings governed by the Hours of Work Act.

The Manitoba Fair Wage Act empowers the Minister of Public Works to limit the number of daily hours for persons employed on provincial public works. Under this authority, maximum hours varying from 44 to 48 in a week are in effect except for teamsters who have a maximum work-week of 54 hours. In 1934, these provisions were extended to certain private works.

In Ontario, the Government Contracts Hours and Wages Act came into force on January 1, 1937, and is generally similar to the Fair Wages and Hours of Labour Act passed by the Dominion Parliament in 1935. The Act provides for an eight-hour day and a 44-hour week on construction works undertaken by the Provincial Government by contract and on works aided by the province.

In Quebec, by an Order in Council in April, 1929, the Minister of Public Works and Labour was empowered to determine fair and reasonable hours of labour in connection with all construction contracts made on behalf of the Government. In 1932, provision was made to include such conditions in contracts made by any other government department. In this province, the hours of employees on certain public works are restricted by the Act respecting the Limiting of Working Hours wherever such works come within the scope of the Act.

In the Yukon, there is a statutory eight-hour day for persons employed on public works except in cases of "extraordinary emergency."

Other provinces have at one time or another, adopted a "fair-wage" policy in connection with public works. There is no information as to how far this policy affects hours of labour.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 37] FEBRUARY, 1937 [NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment showed its customary seasonal contraction at the beginning of January, 1937, but the losses, on the whole, were smaller than at the same date in earlier years of the record. The firms furnishing data laid off some 59,300 workers at the date under review or 5·7 per cent of their December 1 payrolls, as compared with an average decline of about seven per cent recorded at January 1 in the years 1921-1936. Returns were tabulated by the Dominion Bureau of Statistics from 10,034 employers whose payrolls aggregated 985,078 as compared with 1,044,411 in the preceding month. The index (average 1926=100) stood at 103·8, compared with 110·1 at December 1, 1936, and 99·1 at January 1, 1936. The indexes for the beginning of January in the preceding years of the record are as follows: 1935, 94·4; 1934, 88·6; 1933, 78·5; 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1; 1928, 107·7; 1927, 95·9; 1926, 90·7; 1925, 84·9; 1924, 89·8; 1923, 87·3; 1922, 78·8; and 1921, 88·8. The figures are indicative of conditions in all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of January, 1937, reports were furnished to the Department of Labour by 1,816 Local Trade Unions comprising a total of 186,163 members. Of these 26,546 or a percentage of 14·3 were registered as unemployed in comparison with percentages of 12·7 at the beginning of December, 1936, and 14·6 at the beginning of January, 1936.

Reports received from the offices of the Employment Service of Canada for December, 1936, indicated a decline in the volume of business from November, but a gain over that of the corresponding month a year ago, this comparison being based on the average number of placements effected daily throughout the Service. The major changes consisted of gains in logging and services and losses in construction and maintenance under both comparisons and a substantial increase in farming over December, 1935. Vacancies in December, 1936, numbered 33,284, applications 56,051, and there were 31,411 placements in regular and casual employment.

In retail prices the cost per week of a family budget of staple foods, fuel and lighting and rent was $17.04 at the beginning of January as compared with $16.99 for December, 1936; $16.68 for January, 1936; $15.99 for January, 1935; $15.41 for June, 1933 (the low point in recent years); and $22.17 for January, 1930. In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 was 81·6 for the week ended January 29; 81·7 for that ended January 22; 81·9 for that ended January 15; and 80·9 for that ended January 8. The slight decline during the last two weeks of the month was due in large part to lower prices for grains and non-ferrous metals. On a monthly basis the index number was 79·9 for December, 1936; 72·9 for January, 1936; 71·4 for January, 1935; 63·5 for February, 1933 (the low point in recent years); and 95·3 in January 1930.

The table on page 124 gives the most recent statistics available reflecting industrial conditions in Canada. The index of the physical volume of business in December, 1936, was down considerably from the peak levels for recent years reached in the two preceding months. It was, however, higher than at any time in 1935 and 5·5 per cent higher than in December of that year. Of the principal factors used in the construction of the index the manufacturing and construction groups were substantially lower than in recent months, the former mainly because of declines in the indexes of the manufacture of foodstuffs and tobacco. Other principal groups to record declines as compared with the preceding month were imports and exports. In the same comparison mineral production and electric power output showed important advances, the increase in the index of the former being due in the main to higher exports of nickel and asbestos and to increased shipments of gold. All of these principal groups were higher in December, 1936, than in December, 1935. Information available for January, 1937, shows advance in wholesale prices and in carloadings both as compared with the previous month and with January, 1936. A seasonal

*Most of the figures in this table with an analysis are included in the Monthly Review of Business Statistics issued by the Dominion Bureau of Statistics, price $1.00 per year.

†For the week ended January 29, 1937.

(1) Calculated from yields of Canadian bonds. (2) For group figures see articles elsewhere in this issue.

(3) Adjusted for number of business days and seasonal variations.

(4) Figures for end of previous month.

(5) Figures for four weeks ending January 30, 1937, and corresponding previous periods.

(6) Sugar production given in periods of four weeks ending December 31, November 28 and October 31, 1936; December 31, November 30 and November 2, 1935.

(7) MacLean's Building Review.

decrease occurred in employment as compared with the previous month but the index was higher than in January, 1936. Sugar manufactured was also lower than in December, 1936, but higher than in January, 1936.

The number of strikes and lockouts recorded for January was fifteen, involving 6,009 workers and causing time loss of 67,082 man working days, as compared with twenty disputes in December, involving 3,137 workers and causing time loss of 15,917 days. Most of the time loss in January was due to strikes of cotton factory workers at Welland, Ont., loggers in Northern Ontario and asbestos miners in Quebec. In January, 1936, there were only four disputes, involving 205 workers with a time loss of 1,105 days. Of the fifteen disputes recorded for January, eight were recorded as terminated, four resulting in favour of the workers involved, one in favour of the employer concerned, while compromise settlements were reached in three cases. Seven disputes, involving approximately 1,560 workers, were recorded as unterminated at the end of the month. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been called off or definitely declared terminated by the unions involved.

Privy Council Decisions on Validity of Dominion Legislation

The texts of the judgments of the Judicial Committee of the Privy Council on the constitutional validity of the of the Dominion's social legislation are given as the concluding article of this issue. Prefacing the texts is a summary of the decisions indicating briefly the findings of the Judicial Committee and wherein they differ from the judgments of the Supreme Court of Canada.

Report of Board in Railway Dispute

During the past month the proceedings under the Industrial Disputes Investigation Act related principally to the dispute between the railways and various classes of their employees concerning the elimination of wage deductions. As detailed in this issue (commencing on page 133), the Board of Conciliation and Investigation, appointed under the Act, reported to the Minister early in February. The Board was not unanimous in its findings, the chairman and the nominee of the railways recommending a three per cent reduction of the deduction, spaced throughout the year, with a greater percentage if railway revenues increased beyond a certain point. The Board member nominated on the employees' recommendation recommended in a minority report, the complete elimination of the 10 per cent wage deduction within the year. The majority award while accepted by the railways was rejected by the employees and a strike ballot is in course of submission to the railway workers.

Other proceedings under this Act are given in the section on pages 131-2.

Administration of Combines Investigation Act.

Hon. Norman McL. Rogers, Minister of Labour, gave notice in the House of Commons on February 11, of a Bill "to amend and consolidate the Combines Investigation Act and amending act of 1935, to provide for the administration of the Act under the Minister of Labour by an officer to be known as the Commissioner of the Combines Act, for the investigation of alleged combines by the Commissioner, and for the appointment of such a commissioner, special commissioners and assistants; and to provide salaries, remuneration and expenses therefor."

Under the Combines Investigation Act Amendment Act 1935, (Labour Gazette, October, 1935, page 885) which came into force on October 1, 1935, administration of the Combines Investigation Act was transferred on that date from the jurisdiction of the Minister of Labour to the Dominion Trade and Industry Commission.

Economic Recovery noted in Throne Speech.

Factors in the economic recovery of the country were noted in the Speech from the Throne opening the eighteenth Parliament of Canada. In part this section of the Speech was as follows:

"A marked increase in trade and commerce has been accompanied by a noticeable improvement in the general economic position. Outstanding features of this improvement have been an expansion of markets, a revival of industry, an increase in employment, ascending government revenues, and upward trends in wages and prices. In the primary industries improvement has been especially noteworthy."

The following reference was made to progressive action in attacking the problem of unemployment and relief:

"With the assistance and co-operation of the National Employment Commission, progress has been made in coping with unemployment and relief. Relief camps were closed on July 1. A registration of unemployed persons on relief has been completed. Dominion-provincial agreements have been entered into respecting a farm employment plan, under the terms of which work has been provided for thousands of single homeless men. A home improvement plan has been put into operation.

Despite these measures, however, and the substantial increase of employment, the provision for large numbers still on relief remains a foremost problem."

It was announced "that measures will be taken in co-operation with the provinces, to assist in the establishment of unemployed young people."

The adoption of a comprehensive program to meet widespread and intensive drought conditions in Western Canada was also referred to in the Speech.

Among other measures forecast were encatments "to facilitate the making of loans for the repair and improvement of rural and urban homes; to amend and consolidate acts which relate to combines in trade and industry, and to provide for pensions to the blind at a lower age than seventy years."

Report of Inquiry into Anthracite Coal Trade.

The report of Dr. H. M. Tory, appointed a Commissioner under the Inquiries Act to inquire into the importation and distribution of anthracite coal in Canada, was made to Honourable Norman McL. Rogers, Minister of Labour, on February 3 and was tabled by the Minister in the House of Commons on February 4.

While no evidence of price-fixing arrangements was found, certain undesirable conditions of monopolistic control in the city of Quebec were reported to exist. Recommendations were made in the report for regular analyses of imported coals and classification according to suggested standards of qualities, maintenance of competition in the sources of supply and in the distribution of anthracite, action by municipalities to prevent such practices as short-weighting and the incorrect description of various classes of coal, and the encouragement of consumers' co-operative enterprises engaged in the distribution of coal.

Further details regarding the report will be published in a later issue of the LABOUR GAZETTE. Copies of the report are being printed and will be available in English and French.

Health Insurance in effect in British Columbia in April.

A reported announcement made recently by the Hon. T. D. Pattullo, Premier of British Columbia, indicates that the health insurance scheme of that province (LABOUR GAZETTE, May, 1936, pages 422-3, and November, 1936, page 977) will come into full effect on or about April 1, 1937, with the commencement of benefits under the plan. Levies on wages and payrolls are scheduled to begin March 1, 1937. Under the Health Insurance statute as it now stands the Health Commission may collect 2 per cent of the income of wage-earners receiving up to $1,800 a year, and 1 per cent of payrolls paid by employers. The Provincial Government's direct contribution so far has been $100,000 for the purposes of organization.

Revision of industrial codes in Alberta.

Revision of Alberta's industrial code legislation under the Department of Trade and Industry Act (LABOUR GAZETTE, November, 1936, page 997 and April, 1936, page 502) was forecast in a recent announcement of Hon. William Aberhart, Premier of Alberta, who stated that a general code covering service trades would be introduced during the February session of the Legislature. This services code, he stated, would be similar in principle to those in effect under the general retail code. (The provisions of the code for the retail trade were given in the LABOUR GAZETTE for May, 1936, on page 424. Other codes established were those for the dyeing industry—LABOUR GAZETTE, May, 1936, page 425—and commercial printing—LABOUR GAZETTE, November, 1936, page 1004.)

Premier Aberhart also announced that it is the intention to repeal the sections of the existing codes dealing with price fixing. (By amendments to the Department of Trade and Industry Act provision was made for the fixing of maximum and minimum prices for commodities and services).

As reported by the Canadian Press, that part of Premier Aberhart's statement relative to the rescinding of the price fixing provisions was as follows:

"At the request of several industries, codes have recently been enacted which, in addition to regulating unethical practices, embodied minimum price schedules. It has been found, in many instances, that instead of the members of the industry affected explaining the necessity for the scale of prices established, the government has been blamed for raising prices, and this at a time when the purchasing power of Alberta citizens is at a low ebb.

"From the trial period it is evident that the time is not opportune for the establishment of price schedules, and these portions of the codes in question will be rescinded. The purchasing power of those engaged as primary producers will need to be increased to a fair and equitable level before consideration can be given to price fixing in other lines."

Bill Providing for Home Improvement Plan

In order to receive legislative sanction for the Home Improvement Plan, designed to stimulate building renovation, Bill 11 (The Home Improvement Loans Guarantee Act) was introduced in the House of Commons on January

29 by the Hon. C. A. Dunning, Minister of Finance.

The plan as recommended by the National Employment Commission and set in operation on November 1 (LABOUR GAZETTE, November, 1936, page 988) was based upon an agreement with the chartered banks to advance loans, aggregating 50 million dollars for the purpose of making repairs, additions and improvements to urban and rural homes. The guarantee of the federal government is limited to fifteen per cent of the total amount of the loans made by any approved lending institution and in any case the government guarantee is not to exceed $7,500,000 of the aggregate.

As indicated by the Hon. C. A. Dunning in introducing the measure, the major objectives of the plan were: (*a*) To absorb unemployment in the building trades when unemployment is not heavily concentrated; (*b*) to stimulate a revival of the construction industry; (*c*) to make it possible for home owners throughout Canada to make long-needed repairs and improvements to their homes.

New features in the Bill provide a higher maximum of loans on multiple family houses and longer repayment period for loans in excess of $1,000. (Five years is the maximum limit fixed by the Bill for loans over $1,000.) Penalties are also provided for false statement or improper use of the loan.

Hon. Mr. Dunning announced that statistics as to loans during the first two months of operation indicated that $1,200,000 had been loaned in small amounts comprised in approximately 3,600 individual loans.

Present Situation under Dominion Housing Act.

Housing was debated in the House of Commons on February 10 on a motion of Mr. Denton Massey (Greenwood) that the government "give full and immediate consideration to the setting up of a housing plan with a thought to eliminating slum conditions," to overcome a shortage of sufficient dwellings, and to make it possible for the working man to build his own home. Mr. Massey in introducing his motion reviewed the experience of Sweden in low cost housing.

In the course of discussion, Hon. C. A. Dunning, Minister of Finance outlined some of the features of the present Dominion Housing Act (LABOUR GAZETTE, July, 1935, page 624). He indicated that up to the end of January, 1,119 family units had been built under the Act at a cost of $5,376,000. Continuing, he pointed to the steps taken last September by Order in Council designed to encourage lending institutions to make loans for low cost homes and to make loans in the smaller and more remote communities. Under this Order in Council "authority was secured to bear a greater share of the loss and of the special expenses made in making these two classes of loans—the small loans, and loans in small communities."

The result of this modification of the original formula for allocating losses was outlined by the Minister as follows:—

"Wherever the lending institution made an 80 per cent loan for an amount of $4,000 or less, the Dominion government agreed to bear 80 per cent of the loss in the case of such loans up to $3,000, 75 per cent of the loss where the loan exceeded $3,000 but did not exceed $3,500, and 70 per cent of the loss where the loan exceeded $3,500 but did not exceed $4,000. The effect of this Order in Council is now becoming more visible, particularly in the erection of the lower cost houses. The average cost per house since the scheme was inaugurated has been $4,861. Obviously, that is high. That is not a low cost house. But as evidence of the greater development since September last, as a result of the Order in Council to which I am referring, I might point out that ninety-nine family units were built in the month of January, and the average cost of the whole ninety-nine was $4,123, a drop in the average for the whole scheme from $4,861 to $4,123, greater emphasis being placed, as these figures show, upon the lower cost unit."

In regard to Sweden's experience in low cost housing, Hon. Mr. Dunning observed:

"The only comparison I can make of what is possible under the Dominion Housing Act is to say that an approved house—that is, all the specifications have been approved by the housing administration of the Department of Finance—containing a living room, kitchen, bathroom, three bedrooms, full basement, central heating, insulated and well constructed—incidentally, the criticism that we have had is that our specifications are too stiff—can be built on an average lot for approximately $2,700. An eighty per cent mortgage would amount to $2,160, leaving an equity of $540 to be supplied by the owner. There is the difficulty. The monthly cost to pay interest and amortise the principal on that house would be $14.12. I submit that $14.12 to amortise a house of that kind puts it definitely in the category of low cost housing."

Local taxation was the reason expressed by the Minister for the reluctance of people to invest in a home of this type and in this respect he stated:

"The main reason why people who have $500, and who could get a home of that kind of which they would be proud, are not going into the scheme, is not because of any interest factor, not because the $14.12 per month is too

much for them, but because the local taxes are what they are, and again I say that is within provincial and municipal jurisdiction."

Housing and Slum Clearance in Great Britain

In 1933 the departmental committee on housing in Great Britain was appointed to consider what steps might be necessary "to secure the maintenance of a proper standard of fitness for human habitation in working-class houses." Among other recommendations, this committee proposed that every owner of a working class property which is not in all respects fit for human habitation shall be made liable at law to expropriation on a new basis of compensation. In 1935 a new Housing Act (LABOUR GAZETTE, February, 1935, page 140) was adopted "to make further and better provision for the abatement and prevention of over-crowding," the redevelopment of urban areas, and the reconditioning of buildings, etc.

The Ministry of Health has issued at intervals a series of half-yearly returns showing the progress in dealing with housing in England and Wales under the various housing Acts. The fifth of this series of reports, recently received, indicates that the record number of 339,538 houses were constructed during the year ended September 30, 1936.

The report also shows that good progress is being made in slum clearance. During the year ending September 30, 1936, 45,148 houses were demolished or closed under the Act of 1930 as compared with 30,890 in the previous year. Up to September 30, 1936, 109,067 houses (with accommodation for 512,941 persons) had been provided for the purpose of rehousing persons displaced under the Act of 1930, nearly one half of which were completed in the year ending on that date.

Recent orders under the Housing Act of 1935 specify the "Appointed Day" for bringing the first part of the Act into force. *The Economist* of January 2, points out that while no time limit has been fixed for the abolition of existing overcrowding, yet on the first Appointed Day it will become illegal for new overcrowding to develop. The first Appointed Day for the operation of the overcrowding provisions under the Act is January 1, 1937, and it applies to 1,282 local authorities. April 1, 1937, is the Appointed Day for an additional 36 local authorities, while the latest order establishes July 1, 1937, as the Appointed Day for 159 local authorities.

National Housing Program in U.S.A.

The United States Federal Housing Administration (LABOUR GAZETTE, August, 1935, page 714 and previous issues) has recently announced its endorsement of a nation-wide program, launched by national organizations identified with the building industry, to demonstrate the feasibility of constructing low-priced homes.

Associations representing the lumber, concrete and brick industries are sponsoring the program which carries out general principles of small house construction evolved by the Federal Housing Administration. The program is expected to be well under way within a few weeks. The National Lumber Manufacturers' Association and the National Retail Lumber Dealers' Association are sponsoring the national demonstration home program for the lumber industry. In addition, the National Concrete Masonry Association, the National Concrete Contractors' Association and the Brick Manufacturers' Association of America are planning similar demonstrations.

The ultimate objective of the program is to make available to approximately 70 per cent of the nation's families, properly designed and well-constructed homes containing minimum requirements of livability and comfort. "This program will attempt to prove," it was stated, "that properly designed small houses can be built to sell within a price range that will attract the great mass of potential small home owners comprising a large majority of our population."

Coincident with the announcement, the first of a series of dealer meetings, sponsored by the National Retail Lumber Dealers' Association, was held at Indianapolis, Indiana. At this first meeting a demonstration home program was launched which has as its objective the construction of one or more low priced homes in approximately 1,000 communities throughout the country. These homes are designed in accordance with principles outlined in the Federal Housing Administration's Technical Bulletin No. 4.

The Federal Housing Administration will aid all of these groups in the construction industry in their nation-wide program. It is the intention to hold a series of subdivision conferences during the coming year in large population centres where Housing Administration experts will outline details of land planning to operative builders and others interested in small house construction. Conferences on design and construction will be held also in many cities to give information concerning the principles of planning small houses. While mortgagee conferences will be held to explain how small homes may be financed by private lending agencies under terms of the Housing Administration's insured mortgage plan. In co-ordinating the nation-wide program and in order to make it more comprehensive plans have been made for participation by public utilities, newspapers and retail department

stores. Through these combined efforts the Housing Administration expects that a large number of small homes will be built throughout the country by the end of spring.

New Factory Legislation in Great Britain.

A press report from London states that the British Government's new Factories Bill was issued on February 2, 1937. It is reported that the new Bill provides: (1) A maximum working week of 48 hours for women and young persons, instead of the existing 60-hour week in non-textile and 55½-hour week in textile factories.

(2) That overtime be limited to 100 hours in the year and six in a week for persons under 16.

The proposed Bill would come into effect on July 1, 1938, but the Secretary of State would be given power to postpone in general or in a specified factory group—but not beyond June 1, 1940—operation of any provision in the part of the Bill dealing with safety measures, should special difficulties arise. This, it is explained, is to permit special treatment of distressed industry which might find it difficult to comply with the provisions.

U.S. Social Security Board's first annual report.

In its first annual report submitted to Congress on February 8, 1937, the Social Security Board established by the Social Security Act, records the progress made in establishing a national program of old-age benefits, in developing state systems of unemployment compensation and in providing assistance to the aged, blind, and dependent children through Federal and State co-operation.

The report states that over 22,000,000 applications for old-age benefit accounts had already been received. In the matter of unemployment compensation some 18,000,000 workers are now covered by the laws of 35 states and the District of Columbia which have been approved by the Social Security Board prior to January 1, 1937. With all but seven states participating in one or more of the public assistance programs set up by the Social Security Act, approximately 1,500,000 persons were by January receiving regular cash payments from Federal and state funds. For assistance to the aged 42 state plans have been approved, 28 for the blind, and 27 for dependent children.

Substantial progress is also reported under welfare provisions administered by other Federal agencies. Public health programs have been expanded and strengthened in 51 states and territories, maternal and child health programs in 50; programs for child welfare and services to crippled children in 42. Vocational rehabilitation is operating in 48 states and territories.

Draft State Legislation on Apprenticeship.

In the January issue of *Survey of Labour Law Administration,* published by the United States Department of Labour, there is given an outline of a proposed State apprenticeship Bill. This proposed legislation originated as a result of action of the Third National Conference on Labour Legislation, meeting in Washington last November, which recommended that the Secretary of Labour appoint a representative committee to draft suggested standards for incorporation in State apprenticeship legislation.

Meeting in Washington on January 7 and 8, this committee drafted suggested legislation which has been endorsed by the Federal Committee on Apprentice Training.

The purpose of the suggested bill is to promote sound apprenticeship, which will insure the development of desirable all-round training in accordance with the needs of the various trades. The suggested bill provides that the administration of the voluntary apprenticeship program be placed in the State department of labour, since this is the agency of government charged with the protection of employment standards.

At present only two States—Wisconsin and Oregon—supervise employment standards in apprentice training. Several States have requested assistance in drafting apprenticeship Bills for introduction in the legislatures this year.

Survey of World Unemployment Situation.

In practically every country, registered unemployment has continued to decline as compared with the corresponding date a year ago, according to quarterly statistics on employment and unemployment published in "Industrial and Labour Information" by the International Labour Office. This further general decline, it is stated, "indicates a continuation of the improvement which has now been taking place for nearly four years." Austria and Switzerland are exceptions to this rule, both of these countries having shown an increase in unemployment three months ago. On the other hand, in France, Hungary, New Zealand and Rumania, where the number of unemployed had increased three months ago it has now declined or remains stationary. In presenting statistics of employment and unemployment the International Labour Office emphasizes the limitations of statistical tables and states that such statistics only serve to indicate

the trend of employment and unemployment in the countries concerned.

Statistics based on unemployment insurance schemes indicate declines in unemployment ranging from 3·5 in Belgium to 2·1 in Denmark. The United Kingdom registered a decline of 2·3 per cent over the corresponding period of 1935. Increases in unemployment in this group were registered by Austria (1·3 per cent) and Switzerland (1·8 per cent).

Unemployment statistics obtained from returns made by trade unions indicate declines in unemployment ranging from 6·1 per cent in the United States to 2·3 per cent in Canada. Other declines were 5·6 per cent in Norway and 3·9 per cent in Australia. Statistics based on social insurance schemes, show improvement in indices of employment ranging from 9·6 in Yugoslavia to 4·3 in Belgium. An improvement of 5·4 was registered in Great Britain's employment index.

Returns from selected establishments also reflect the general improvement in employment. Indices advanced in various countries ranging from 31·1 in Bulgaria to 0·7 in France. The index of employment based on returns from selected establishments in Canada for the period reviewed showed an improvement of 2·7. Other countries showing an improvement were: Japan (5·7); Norway (5·0); South Africa (10·3); United States (6·5); and Sweden (6·5).

NOTE—More recent statistics dealing with the employment situation in Canada are given in this issue of the LABOUR GAZETTE and show the index of employment as at December 1, 1936, to be 103·8.

Toronto Store Employees Petition for Shorter Hours

Supported by the affiliated unions of the Toronto District Labour Council and the 170 organizations comprising the Toronto Youth Council, the Office and Store Employees' Association, Local 93, of Toronto, has petitioned the Toronto Council for a by-law requiring that all retail establishments in the city, regardless of class of trade, remain closed from 7 p.m. until 5 a.m. each day of the week except Saturday on which day they may stay open until 9 p.m. The petition also would provide for the closing of such establishments at noon on one additional day each week.

The petition, as summarized in the February 6 issue of *Hardware and Metal*, states:

"The long and sporadic hours of work in many cases amount to from 80 to 100 working hours per week and it is the general practice to work store employees for the full six days of each week.

"It is not uncommon to find," continues the brief, "on a Saturday night in a chain store, for example, the clerks working until 2 and 2.30 Sunday morning. Even the youngster who is the messenger boy is found on the premises long after midnight on Friday and Saturday nights!"

Reasons advanced for the adoption of the early closing bylaw were that it would not only raise the living standards of the employees of these establishments by providing more leisure hours for recreation and cultural advancement, but would also do much to alleviate the conditions of unemployment in this field since the shorter business day will result in an increase in the volume of business within specified hours and necessitate enlarging the staffs of the various establishments to cope with the additional business.

"In placing our request before you for early closing of retail stores and a half day off per week for such employees," the petition adds, "we are acting on fully-established precedents both in the Mother Country and in Canada. Shop Acts have been in force in England since 1912, legislation on working conditions and working hours, limiting hours in most cases to 48 hours per week and stipulating the closing of shops at an hour conducive to the health and wellbeing of the employees.

"In Canada we have precedents established by by-laws in the following cities—Winnipeg, Hamilton, Ottawa, Montreal and Vancouver. We cite as one example, Winnipeg by-law No. 1853 passed in the year 1900, covering the closing of all retail stores at 6 p.m. on week days and 10 p.m. on Saturdays."

The draft bylaw submitted with the petition contained a provision making it unlawful "to take an order by telephone or otherwise during the hours in which any shop is required by this bylaw to remain closed."

Section 4 of the proposed bylaw exempted from its provisions "the sale at any time of any article required in cases of death, illness or accident."

According to a report on "The Distilled Liquor Industry in Canada, 1935," issued by the Dominion Bureau of Statistics, there were during that year sixteen establishments engaged in the production of distilled liquor, five of these were located in the Province of Quebec, nine in Ontario and two in British Columbia. Two of these did bottling only. These sixteen establishments in 1935 reported a capital investment of $42,045,051, a payroll of 1,580 persons who received $1,913,271 in salaries and wages. The value of production amounted to $16,114,361.

RECENT PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

Reports were received recently by the Minister of Labour from two Boards of Conciliation and Investigation which had been established under the Industrial Disputes Investigation Act to inquire into disputes affecting (1) the Algoma Steel Corporation, Limited, and certain of its employees being members of the Algoma Steel Workers Union, and (2) the Canadian National Railways and Canadian Pacific Railway (subsidiary railways: Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways, and Esquimalt and Nanaimo Railway), and various classes of their employees.

Applications Received

Two applications for the establishment of Boards of Conciliation and Investigation were received in the Department of Labour during the month of January as follows:—

(1) From certain employees of the London Street Railway Company, being motormen, conductors, bus operators, shopmen, barnmen, trackmen, etc., members of Local Division 741, Amalgamated Association of Street and Electric Railway Employees of America. The employees request (1) restoration of the 10 cents by which their hourly wage rates had been reduced, and (2) one week's holidays with pay each year. One hundred and eighty men are stated to be directly affected by the dispute.

(2) From 840 textile workers employed by the Empire Cotton Mills, Limited, at Welland, Ontario. These employees are affiliated with the United Textile Workers of America. The acting Mayor of the City of Welland also applied for the establishment of a Conciliation Board in this case. The employees had ceased work on December 22, demanding an increase in wages of 20 per cent. The company had already increased wages by 6 per cent. The application stated that the employees were dissatisfied with the wages paid, mill conditions and quality of cotton used, and objected to the speed of production. In addition to a wage increase of 20 per cent, the employees desired recognition of the workers' committee and an undertaking on the company's part not to discriminate against the employees on account of participation in the stoppage of production or for trade union activity outside of working hours. The industry concerned not coming within the direct scope of the Industrial Disputes Investigation Act, a Board of Conciliation and Investigation could be established in this case only with the joint consent of both parties to the dispute. The management of the Empire Cotton Mills, Limited, refused concurrence in Board procedure, but indicated its willingness to co-operate with the Department of Labour in any efforts which might be made towards effecting a settlement of the dispute. Further particulars in regard to this dispute are given in the article on Strikes and Lockouts elsewhere in this issue.

Chairman Appointed

The personnel of the Board of Conciliation and Investigation established to deal with a wages dispute between the Canadian National Railways and its clerks and other classes of employees, being members of the Canadian Brotherhood of Railway Employees, was completed on January 25 by the appointment of His Honour Judge F. L. Smiley, of Ottawa, as third member and Chairman. Judge Smiley was appointed by the Minister of Labour in the absence of a joint recommendation from the other Board members, Messrs. W. Sanford Evans, of Winnipeg, and Howard S. Ross, K.C., of Montreal, nominees of the company and employees respectively.

Agreement Effected

It was reported in the August issue of the Labour Gazette (page 682) that an application for the establishment of a Board has been received from twelve freight handlers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, employed on the wharves at St. Andrews, N.B. The applicants claimed that, by arranging to handle the work on the wharves through a contractor, the Canadian Pacific Railway Company had jeopardized the seniority standing of their former employees, their pension privileges, etc. These men desired to remain as employees of the Canadian Pacific Railway Company and to enter into an agreement with that company on an hourly wage basis. As a result of departmental mediation, negotiations were entered into between the parties concerned, and the Department was advised during January that the Canadian Pacific Railway Company and representatives of the workmen in question had signed an agreement in regard to the handling of cargo at the Port of St. Andrews on a tonnage basis, the agreement to become effective after expiry of thirty days' notice to the contractor.

There appeared in the January issue of the Labour Gazette (page 9) the text of the

unanimous report of the Board of Conciliation and Investigation which dealt with a dispute between the Cadomin Coal Company, Limited, and its employees, being members of Cadomin Local Union No. 7296, United Mine Workers of America, in regard to the interpretation of the clause in the general agreement providing for equalization of work for the miners. It should have been explained in the January issue of the LABOUR GAZETTE that when application was made by each party for the establishment of a Board in this case, the Cadomin Coal Company, Limited, and the representatives of Cadomin Local Union No. 7296 agreed that the recommendations of the Board would be final and binding on both parties.

Report of Board in Dispute between the Algoma Steel Corporation, Limited, and its Employees

The Board of Conciliation and Investigation established to inquire into a dispute between the Algoma Steel Corporation, Limited, and approximately 2,000 employees, members of the Algoma Steel Workers Union, submitted its final report to the Minister of Labour during January. The report is unanimous and is accompanied by an agreement respecting wages which was reached between the parties to the dispute with the assistance of the Conciliation Board.

An interim report made by the Board in September, together with a signed agreement covering working conditions and hours of employment, was printed in the October issue of the LABOUR GAZETTE (page 863).

The Conciliation Board which dealt with this dispute was composed as follows: Mr. A. H. Dowler, K.C., of Fort William, Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. Lynn B. Spencer, K.C., of Welland, nominated by the company, and Mr. W. F. O'Connor, K.C., of Ottawa, nominated by the men.

The texts of the final report of the Board and the agreement respecting wages follow:—

Report of Board

In the matter of the Industrial Disputes Investigation Act and of a Dispute between the Algoma Steel Corporation, Limited (Employer), and certain of its Employees, being members of The Algoma Steel Workers' Union (Employees).

The Honourable Norman McL. Rogers,
Minister of Labour,
Ottawa, Canada.

SIR,—The undersigned members of the Board of Conciliation and Investigation, established by your order of the tenth day of July, 1936, referring to and incorporating herewith its interim report made on the seventeenth day of September, 1936, have the honour to submit the following final report:

By the intervention and with the assistance of the Board the parties concerned arrived at and executed, on the eleventh day of January, 1937, the hereunto annexed agreement.

The employers and employees alike acted throughout the proceedings with such marked fairness, reasonableness and courtesy that the Board cannot conclude its labours without expressing its gratitude to them therefor.

All differences between the parties hereto have been satisfactorily adjusted.

All of which is respectfully submitted.

Dated at Sault Ste. Marie this eleventh day of January, 1937.

(Sgd.) LYNN B. SPENCER,
Member.
(Sgd.) W. F. O'CONNOR,
Member.
(Sgd.) A. H. DOWLER,
Chairman.

AGREEMENT *RE* WAGES

This agreement made in duplicate this eleventh day of January, 1937, between Algoma Steel Corporation, Limited, hereinafter called "the employer," of the one part, and the Algoma Steel Workers' Union, hereinafter called "the employees," of the other part:

Witnesseth that the parties hereto, in consideration of the respective covenants of each with the other, hereinafter expressed, have agreed with relation to the employment of the employees by the employer during the subsistance of this agreement, as follows:—

1. This agreement shall come into force on the day of its date, and, subject to its contents, shall be read as one with that certain existing agreement between the parties hereto which was made and executed on the sixteenth day of September, 1936.

2. On, from and after the first day of March, 1937, and until and including the thirtieth day of September, 1937, but subject as hereinafter stated:—

(*a*) The basic rate of wages for ordinary labour prevailing throughout the plant and works of the employer shall be thirty-seven and one-half cents (37½c.) per hour (representing an advance of approximately thirteen and one-half per centum (13½ per cent)) and no such lower rate shall therein prevail or be paid.

(*b*) The rate of wages now being paid in such plant and works to employees engaged at occupations which, in the year, 1928, were

performable for the predecessor of the employer by employees then and since known as—

"twelve hour men" shall be advanced by 11½o per cent,

"eleven hour men" shall be advanced by 9½o per cent,

"ten hour men" shall be advanced by 7½o per cent,

and "nine hour men" shall be advanced by 5½o per cent, but the rate of wages now being paid as aforesaid to employees engaged as aforesaid then known as "eight hour men" shall remain as it is at the time of execution of this agreement.

3. Notwithstanding anything in this or in such other agreement between the parties hereto contained, if the average monthly production of steel ingots manufactured by the employer between the first day of January, 1937, and the 30th day of June, 1937, inclusive, exceeds by three thousand tons or more per month the present production of approximately twenty-four thousand tons per month, then on the first day of July, 1937, or at any time thereafter during the subsistence of this agreement, the employees shall be free to re-open, upon three days' written notice to the company, this agreement and to seek a revision of its terms, but if such increase of tonnage shall not eventuate or if such notice be not given the rates of wages provided by this agreement shall continue in force until and during the thirtieth day of September, 1937.

In witness whereof the employer has executed this agreement under its corporate seal and the employees have executed it under the hands and seals of all the members of their Executive Committee.

ALGOMA STEEL CORPORATION, LIMITED,
(Sgd.) T. F. Rahilly,
General Manager.
(Sgd.) Wm. Jeffrey,
Secretary.

Executed in the presence of
(Sgd.) I. Wetherall,
For the employer.

ALGOMA STEEL WORKERS' UNION
(Sgd.) Ivan J. Campbell,
President.
(Sgd.) Harry L. Waite,
First Vice President.
(Sgd.) Spark H. Thomas,
Second Vice President.
(Sgd.) Merl H. Smith,
Secretary-Treasurer.
(Sgd.) Charles E. Harbottle,
Recording-Secretary.

Signed in the precence of
(Sgd.) C. Carey,
For the employees.

Report of Board in Dispute between the Canadian National Railways and Canadian Pacific Railway and Various Classes of their Employees

The Board of Conciliation and Investigation established to deal with a wages dispute between the principal Canadian railways and their employees reported to the Minister of Labour at the beginning of February. The majority findings, which were signed by the Chairman of the Board, the Honourable Mr. Justice A. K. Maclean, President of the Exchequer Court of Canada, and the Board member nominated by the companies, Mr. W. Sanford Evans, of Winnipeg, recommended the lowering of the present wage deduction to 9 per cent on February 1, 1937, to 8 per cent not later than August 1 and to 7 per cent not later than November 1 of this year, a larger reduction in the wage deduction to be substituted in favour of the employees if railway revenues exceed certain figures. The Board member appointed on the employees' recommendation, Mr. Fred Bancroft, submitted a minority report urging the elimination during 1937 of the entire 10 per cent wage deduction in the following manner: 4 per cent on February 1, and 6 per cent in three equal instalments on the first day of the months of May, August and November, respectively.

Certified copies of the two reports were forwarded immediately to the parties to the dispute. The chairman of the men's committee notified the Department by wire on February 3rd that the recommendations of the Board were unacceptable to the employees and that arrangements were being made immediately to prepare a strike ballot for submission to the men. He pointed out that during the negotiations conducted by the Board the Chairman had been advised in writing that the employees' full committee had unanimously refused to accept as settlement of the dispute any agreement or proposed agreement based on the formula relating to gross revenues submitted by the railways. The above information was communicated to the employing companies.

On February 5 a communication was received in the Department of Labour from the managements of the Canadian Pacific and Canadian National Railways, stating that—

> "The Railways are prepared to accept the recommendation of the Board as a basis for an agreement between the Railways and the Employees for the adjustment of the dispute.
>
> The Railways in the conciliation conferences having offered, as stated in the Board's report, to reduce the rate of deduction from compensation from 10 per cent to 9 per cent as from February 1, 1937, they will immediately take the necessary steps to put into effect that part of the Board's recommendation."

The letter added that a copy of the same was being forwarded to the representatives of the employees for their information.

Subsequently the President of the Canadian Pacific Railway Company interviewed the

Honourable Mr. Rogers, Minister of Labour, in regard to this matter, and on February 8 the Chairman of the railwaymen's committee also came to Ottawa to discuss the situation with Mr. Rogers.

The classes of railwaymen affected by this dispute include the following: locomotive engineers; locomotive firemen, hostlers and hostler helpers; conductors; trainmen; railway telegraphers; commercial telegraphers; machinists; carmen; boilermakers; blacksmiths; sheet metal workers; electrical workers; stationary firemen and oilers; maintenance of way employees; pipe fitters; railway and steamship clerks; and signal maintainers.

The texts of the report of the Board and of the minority report follow:—

REPORT OF BOARD

In the matter of the Industrial Disputes Investigation Act and in the matter of a dispute between the Canadian National Railways and the Canadian Pacific Railway Company, and certain subsidiary railways (Employers), and various classes of employees of the said Railways and their subsidiaries (Employees).

To the Honourable
The Minister of Labour,
Ottawa, Ont.

The Board of Conciliation and Investigation appointed by you in the above matter, to inquire into the dispute between the railways and their employees, now beg to report that it commenced its hearings at Montreal on November 23, 1936, and the same continued there for several days, interrupted by one adjournment. Subsequent to the conclusion of the hearings at Montreal the Employees presented further but brief material to the Board at Ottawa. In addition, and at our request, several formal conferences and discussions took place between the parties themselves, and, by consent, rather informal conferences, at separated intervals, took place between the parties and members of the Board. The submissions of the respective parties, consisting of written and oral statements, and numerous documents, were ably and comprehensively, and in a very appropriate and commendable spirit, presented by Mr. H. B. Chase on behalf of the employees, and by Messrs. Hodge and Hills on behalf of the railways.

The employers represented before us comprise practically all railways in Canada except those owned by United States railway companies, and the employees consist of the members of seventeen railway unions and embrace a large proportion of all employees of Canadian railway companies.

The number of employees directly represented was estimated at approximately 82,000; the number to be directly affected by the Board's recommendation at 117,000; and the total number of railway employees in Canada at 127,000. The employees were the applicants for the Board.

It was represented to us that this is the first occasion on which the parties to a dispute referred to a Board consisted, substantially, of all the Canadian railways, on the one side, and, on the other, of the great majority of organized employees of all classes, united in common action for a specific objective. The parties, similarly grouped, had entered into a general basis of agreements in 1934, and as the present dispute arises out of a desire to change those agreements, the same grouping of parties was agreed to in conference prior to the application for a Board.

Terms of Reference

The matters referred to the Board are set forth in documents transmitted to the Chairman by the Registrar of Boards of Conciliation and Investigation under the terms of the Industrial Disputes Investigation Act, 1907.

In Section 23 of this Act it is provided:

"23. Upon the Board being fully established the Registrar shall forward to the chairman a copy of the application for establishment of such Board, and of its accompanying statement and declaration, and of the statement in reply, and the Board shall forthwith proceed to deal with the matters referred to in these documents.

"2. Should it at any stage of the proceedings be made to appear to the Minister that it is necessary, in order to deal satisfactorily with the matters in dispute, that some other matter or matters involved in or incidental to those appearing in the application and statement in answer, if any, should also be referred to the Board, the Minister may under his hand and seal of office refer such matters to the Board accordingly."

It was not, during the course of the inquiry, suggested by either of the parties that the terms of reference should be enlarged and the Board has not itself found reason to make representations to the Minister to that effect.

The application of the employees sets forth that the present dispute arose because of the desire of the employees to change an agreement with the railways entered into on November 3, 1934. In subsequent conferences between the parties the representatives of the employees contended that the agreement "should be cancelled, thereby eliminating the deduction of ten (10) per cent from the employees' pay cheques and restoring to full force and effect the basic rates provided for in the respective agreements as between the railways and their employees." The application sketches the history of wage negotiations between the parties from the date of the agreements to the date of the application for a Board. Reasons for the action taken are not mentioned, but were left to be presented in evidence.

In their statement in reply, the railways claim that the question at issue is really the same as was dealt with by a Board in 1931. This claim enlarges the historical field brought under review to include the period when what are known as the "basic rates," established in the years 1926 to 1929, were first made subject to deduction. Developments since 1931 are traced and certain grounds of action by the railways are set forth, which were later fully developed in evidence.

We take it, therefore, that the specific issue referred to the Board is the contention of the employees that the rates of pay, established between 1926 and 1929, should be restored to full force and effect, and that this issue is to be considered in its historical setting within the period from 1926-1929 to the present time.

Issues not within the Reference

If it is important to define what is directly covered by the terms of the reference it is important also to state what possible issues are not within the reference.

1. The fairness or adequacy of the basic rates themselves under the conditions under which they were established is not before the Board. These rates, under the conditions in 1926-1929, were not challenged by either party but were, at least implicitly, accepted as basic in connection with the present dispute. The employees stated there was no question before the Board "as to the adequacy or inadequacy of basic wage rates and no question concerning either an increase or a decrease in such basic wage rates."

2. In the 1926-29 basic rates, there was a different rate for each of the different classes of employees, and this would necessarily involve different standards of living. Whether these differing rates and standards as between classes were fair when compared one with another, is consequently not in question before the Board. The claim now made is for the full restoration of the basic rates with all the differences in rates as between classes still remaining as before.

3. If the rates of 1926-1929 are the particular starting point of this inquiry, then the history of wage rates prior to that period, which was extensively dealt with by both parties in evidence, while helpful toward an understanding of the attitude and arguments of the parties at the present time, is not before the Board for review or comment.

4. Rates of pay affect only those employed during the time employed. The employees devoted a section of their main submission to "wage or income losses suffered by railway employees in addition to the wage deductions and the increased expenses and burdens assumed by railway employees." The losses of income were stated to have resulted from (*a*) total loss of employment, (*b*) part time work, and (*c*) demotion to lower rated positions. As indicating the seriousness, not only of the dislocation of labour during the depression, but also less directly of the shrinkage of business for the railways, it was pointed out that at the all-time peak in 1929 total railway employees in Canada numbered 187,846, but only 121,923 in 1933 and 127,526 in 1935. While the Board fully realizes what the decline in the volume of railway work has involved in the way of difficulty and distress for many thousands, it must be evident that the problem of volume of work is entirely outside the reference to us. The contention is as to rates of pay of those actually working and during the time they work.

Historical Setting of the Dispute

The principal developments within the period covered by the terms of reference, and related to the matter specifically referred, and the conditions and considerations which actually determined these developments and governed the decisions of previous Boards, would seem to have been as follows:

What are called the basic rates had been established in a series of agreements between the railways, acting separately, and various classes of their employees. These agreements provided for increases over rates previously in effect, the percentage of increase being different in each class. The first agreements in this period were dated December 1, 1926, and involved conductors and trainmen. Agreements with locomotive engineers, locomotive firemen and hostlers and telegraphers, on both railways, and with clerks and freight handlers on the Canadian Pacific Railway, were made in 1927, and with the remaining classes at various dates in 1929. On the Canadian Pacific Railway the agreement with the clerks and freight handlers was revised as late as May 16, 1930. The rates thus established remained in effect during 1930 and the greater part of 1931.

Prior to 1934, when for the first time all classes of employees united in representations, it was in negotiations between the railways and a group of employees, consisting of the locomotive engineers, locomotive firemen, conductors, trainmen and telegraphers, generally known as the "running trades," that the most important changes were first developed, and the course of events will be sufficiently indicated by tracing only the transactions with this one group between 1931 and 1934.

On September 15, 1931, the railways served notice upon the "running trades" of their desire to reduce the rates of pay by 10 per cent because of changes in general economic conditions that had occurred since 1929. In

the negotiations that followed, the railways, according to their submission, "as an evidence of goodwill and in the hope that economic conditions would improve," proposed that the matter should be dealt with in the form of a 10 per cent deduction from compensation that would still be calculated on existing basic rates, rather than by establishing new basic rates. This would seem to have been the introduction of the formula which has attached to the issue ever since and has helped to shape its character.

The employees declined to accept the proposal and the railways applied for a Board, the application being for a revision of existing agreements by a reduction of 10 per cent in the rates themselves. In their original application and in argument the railways rested their case mainly upon two grounds: (1) Their financial condition because of the falling off in their revenues, and (2) the reduction in the cost of living, by reason of which the employees, even with a reduction of 10 per cent, would be in a better position in respect to the purchasing power of their rates of pay than they were when the existing agreements were made.

In its report, the Board stated:

"The real point in issue in this case is whether, since the existing wage agreements were made between the railways and the employees such changed conditions have arisen as justify a decrease in the basic rates of pay."

The Board explicitly accepted "the capacity to earn revenue," and "changes in the cost of living" as important factors in the arranging of rates of pay and came to the conclusion that "according to the merits and substantial justice of the case there should be a 10 per cent reduction in the basic rates of pay."

Referring to a contention of the railways that the principle of considering revenues and costs of living in the adjustment of wages was one that should work both ways, the Board commented:

"This principle has been accepted and acted upon in the past and it is our earnest hope, and we believe it to be just, that if this decrease is now accepted, the restoration to the employees, as soon as conditions sufficiently improve, of any reductions which they have accepted, should have the sympathetic attention of the railways, and we understand from what the railways, themselves, have said at the enquiry that it is their full intention to do so."

The employees at first refused to accept the award of the Board as the basis of an agreement with the railways, but the latter put a change in remuneration into effect on December 1, 1931. They did this, however, under the formula of "a 10 per cent deduction from compensation calculated on existing basic rates of pay," although the recommendation of the Board had been that there should be a reduction of basic rates. This formula thus became established in practice.

Negotiations with the employees were continued and on February 4, 1932, an agreement was reached according to which, "the parties hereto agree to give effect, in principle, to the recommendation of the Board" to the extent that (*a*) the 10 per cent should be deducted from each employee's pay cheques; (*b*) that the basic rates of pay as specified in the various schedules should remain in effect; and (*c*) that the agreement should be effective from December 1, 1931, to January 31, 1933, but if on or after December 1, 1932, "business conditions have not so improved as to enable the railways to terminate the agreement at January 31, 1933," notice to that effect was to be given and conferences were to be held.

Business conditions, instead of improving, continued to become worse and about December 1, 1932, the railways gave notice that after January 31, 1933, they would be unable to discontinue the 10 per cent deduction and must propose a still larger deduction, later stated at 20 per cent. The employees refused to accept the 20 per cent deduction but expressed willingness that the 10 per cent deduction should continue, but this was not acceptable to the railways. A Board was applied for and set up in March 1933.

This Board, by a majority, recommended acceptance of the 20 per cent deduction as from May 1, 1933. The main ground of the recommendation was the change that had taken place since 1926-1929 in the revenues of the railways, in general economic values and in the cost of living. The report states: "We have intimated above and we now say, that in our view the contrast which might justify in February 1933, the deduction asked for from the rates agreed upon in 1927 and 1929 would be a contrast between the conditions on the two dates." And later: "On the whole we find that there has been a decrease in the current price and value, in terms of money, of labour, of all classes, of not less than 20 per cent between 1929 and February, 1933; we find that there are no reasons for suggesting that the employees in question should be exempted from this percentage of reduction."

A changed attitude on the part of the employees from that expressed in the agreement signed on behalf of the same group a little over one year before, is noted by the Board and, on this occasion, the employees "disassociate themselves from the principle of the agreement of February 4, 1932, and repel the argument."

The finding of the Board, however, adhered to the principle of that agreement and of the conclusions of the preceding Board. The Board referred to "the unqualified admission of the Companies that what is sought is temporary diminution of the rates, the basic rates to continue to be basic." The recommendations of this Board were not accepted by the employees, but the railways on May 1, 1933, put into effect the 20 per cent reduction in the remuneration of the classes represented.

Railway revenues reached their lowest point in this year, 1933, but by the autumn were showing signs of improvement. Conferences were then resumed and on October 28 a compromise agreement was reached whereby the 20 per cent deduction should continue until October 31, and from November 1, 1933, until October 31, 1934, the rate of deduction should be 15 per cent. From November 1, 1934, the deduction was to be reduced to 10 per cent with the proviso, however, that after September 1, 1934, either party might give notice of a desire to change this latter percentage before it became effective.

Railway revenues in 1934 had shown such small improvement that the railways did not feel they would be justified in raising wages to the 10 per cent deduction scale as of November 1. Negotiations were therefore entered upon in the month of October and on this occasion all classes of employees took joint action.

In the negotiations the railways made a proposal, based on the principle of sharing between the railways and their employees the anticipated improvement in revenues, to the effect that wage rates should be adjusted at the beginning of each quarter, rising proportionately to the increase in revenues in the preceding quarter. This proposal was not accepted by the employees, but by November 1, 1934, a compromise agreement was reached that the 15 per cent deduction rate then in effect should continue until December 31, 1934; that from January 1, 1935, to April 30, 1935, the deduction should be 12 per cent; and that, effective May 1, 1935, the deduction should be 10 per cent; the last mentioned deduction to continue in effect thereafter, subject to the right of either party, after July 1, 1935, to serve thirty days' notice of a desire to change such percentage of deduction. In exercise of this latter right the employees, on March 26, 1936, served the notice which led to the establishment of the present Board.

Examination of Evidence and Arguments

The contention out of which arose the present dispute is, as has been stated, that the basic rates, established in the period 1926 to 1929, should be fully restored. It is estimated that the full restoration of the basic rates would involve an added operating cost to the railways, on the basis of present numbers employed, of approximately $18,000,000 per year.

It would appear from the formula adopted, and also from direct statements, that the railways have all along regarded the deductions from the basic rates as temporary during the economic depression that set in after 1929, and they have expressed their willingness to restore these rates as conditions permitted. The dispute is not, therefore, as to the ultimate restoration of the basic rates but, in particular, as to the time or times at which reductions in the deduction should be made and as to the proportions restored on each occasion.

Although no date was named in the application of the employees, it may be assumed that immediate full restoration was originally contemplated by them. In later conciliation conferences full restoration by stages within six months was suggested. The particular issue, then, is as to whether full restoration should take place within six months, or, possibly, at least within the year 1937.

In support of their contention the employees presented many arguments and a large volume of historical and statistical material. In their own summary of their main case, the consideration first mentioned is the contrast between the wages being paid on Canadian railways within Canada and those on railways within the United States and on lines in Canada owned and operated by United States companies. Among the other main lines of argument were these: that the railways "have rapidly risen from the deep troughs of the depression," and are, or should be, in a position to pay the higher wages; that general business is rapidly improving; and that the employees have contributed to an increased efficiency and productivity in the railways and that there is a "need for a corresponding increase in their individual purchasing power." A substantial portion of the employees' case was concerned with an examination of the tests, or yard-sticks, to be applied in estimating purchasing power and the ability of the railways to pay. Throughout the history of this issue the railways have advanced, as the main conditions to be considered, the financial position of the railways, the changes in the value of money and purchasing power, and changes in the state of general business. As is clear from the record, these conditions have actually been taken into account by previous

Boards. It is evident, therefore, from the contentions of both parties, that the way of measuring alterations in the conditions fundamental to the issue, and the degree to which any such measurement should be regarded as indicating a proper wage scale, must necessarily be crucial points in the discussion.

Changes in the financial position of the railways have been measured by items in their published financial statements, but it has been a question, for example, whether gross revenue from purely railway operations in Canada is in itself a satisfactory index, or whether revenues from all sources should be considered. In estimating changes in the purchasing power of money wages, three measures have been applied by the railways, the "All Items" index, compiled and published by the Department of Labour, the "Family Budget" index, by the same authority, and the "Retail and Cost of Living" index of the Dominion Bureau of Statistics. All three have been criticized by the employees. For measuring changes in general economic conditions various indexes, mostly published by the Dominion Bureau of Statistics, and also news items in the public press, have been cited.

Before discussing their validity, it is very important to recognize the extent to which these various measuring indexes have been regarded as indicating a proper wage scale. General automatic regulation of wages by these indexes has not even been suggested. Moreover, indexes, when appealed to, have never been applied exactly, but only very approximately, and other factors which might modify their bearing on the argument have always been recognized.

In their submission to us the railways stated:

"Admittedly reasonable and just compensation for the employees is a first charge on any enterprise."

The employees laid down a general doctrine in these words:

"A proper and sufficient earnings, or income, for employees is, and must be, the first charge and responsibility to be met by employers. This charge, as a matter of social justice and economic necessity, must be met before consideration is given to the payment of interest or dividends."

We do not feel called upon to express an opinion upon a general doctrine of this kind but note at least partial similarity, if not full identity, in the views of the two parties on this point.

As a matter of fact, the railways have not, as we understand it, proposed at any stage since 1929, and do not propose to-day, a money rate of wages which would impair the real remuneration of the employees as established by agreements in the period 1926-1929. It has been an essential part of the railways' case that, at every change, the employees for whom work existed were left with a higher purchasing power than in the basic period. It is because this has been logically the central point in the case, that the way of measuring real wages has been so controversial. The condition of the revenues and finances of the railways has been advanced as among the reasons why they, at any stage, should not pay more, or much more, than what had been agreed, as recently as 1929, to be a fair remuneration.

That changes in the value of money in terms of goods and services do occur is an economic fact. The only question is as to how to determine the degree of change. With a single commodity or service, or with a fixed group, there is no difficulty; but the groupings of goods and services consumed by different individuals, families or classes, vary, and if a common index is to be set up the problem is to select a group of goods and services that is typical and representative within comparatively narrow limits. Part of the criticism by the employees of the three cost of living indexes was that there had not been sufficiently comprehensive or detailed studies of individual or family budgets, to satisfactorily establish the basic material. A good deal of their argument rested, however, on the assumption that the indexes were designed to show how much it cost to live in Canada, whereas, most explicitly, they are put forward to indicate only percentage changes in cost from time to time; and it is not improbable that the price changes in an intelligently selected list of standard goods and services may prove closely representative of the average of all price changes.

The most comprehensive basis, as shown by the submissions made to us, is that of the index published by the Dominion Bureau of Statistics. The list of commodities and services is large, and the quantities estimated as consumed are calculated from the total quantities consumed in Canada, many of which can be accurately measured. It is, as it were, an index of the price changes in the actual budget of the people of Canada as a whole, and as such it must possess a very considerable degree of scientific merit. The employees before the Board include unskilled labourers, all grades of workers up to the highly skilled trades, and other occupational groups, and the numbers are so large that what railway employees actually consume is an appreciable factor in the making of the average national budget. The index of price changes in the national budget cannot therefore be disregarded as being of no significance

when estimating the price changes affecting so representative a body.

The base of the "All Items" index is not so broad as that of the Dominion Bureau, and that of the "Family Budget" is less comprehensive still. The commodities and services computed have not, however, been selected without some investigation and have been subject to continuous observation as to results over many years. They are intended to show price changes representative of those experienced in cities by workingmen's families.

That each one of these indexes has probably had, in reality, a general representative character is indicated, it is pointed out, by the similarity in their curves. If, for example, the year 1926 be taken as 100, the Dominion Bureau index had declined to 81·5 for the month of September, 1936, the latest month reported in the records submitted to us; while for the same period the decline in the "All Items" index had been from 100 to 80·9, and in the "Family Budget" index from 100 to 78·4. Thus price changes under all these three indexes in a ten-year period, fell within the narrow range of about 3 per cent. As no exact application of such indexes is involved, this variation is insignificant.

We have given space to this matter because of the place it occupied in the discussions, as well as because of its intrinsic importance. Changes in the value of money and the cost of living have been factors influencing the decisions of wage tribunals in the past, and these very indexes have been recognized as having some indicative value, and, upon occasion, have been appealed to by employees as well as by employers. It would be well that the authorities responsible for the compilation of the indexes should recognize the importance of making and keeping them statistically sound.

What the application of these indexes indicates as to the real wages of the employees at the different stages between the basic period and the present, was put before us by the railways. In the past the indexes most generally applied were those of the "All Items" and "Family Budget." The index least favourable to any extreme claim is that of the Dominion Bureau. What is indicated by it is, that $100 in money wages in 1926, when prices were at 100, would buy, say, 100 units of goods and services, distributed according to average consumption in Canada; whereas, in September, 1936, when, because of the deductions, money wages were only $90 but prices had been reduced to 81·5, the $90 would buy 110·4 units. Making all reasonable allowance for individual differences in standards of living and for the technical and other more solid objections by the employees to the indexes themselves, there would seem to be sufficient margin in the above figures to support the contention that the present scale of wages has not necessitated a lowering of the standard of living, as compared with the basic period 1926-1929. On the basis of similar calculations there would seem no good reason to doubt that real wages have been well maintained throughout all the deduction period. That the trend of the indexes has recently been upward, indicating increasing costs, is a condition to be taken into account and this will later be considered.

It was not part of the employees' case that railway rates of pay in Canada compared unfavourably with the rates received by other general classes of employees in this country. Their main contention in this respect rested on a comparison of railway rates in Canada with those in the United States. On the other hand, the railways held that their employees enjoyed a higher scale of remuneration than did other approximately comparable classes in Canada. While it was not suggested that different classes of labour could be closely compared in this respect, or the differences accurately measured, the railways directed attention to the wage calculations in the publication, "Wages and Hours of Labour in Canada," issued by the Department of Labour, and instituted a comparison particularly between wages in manufacturing industries and in railway operations. Comparison in this publication is between rates calculated per hour on the number of hours worked, which the employees contend is not a fair basis for calculating the remuneration of certain classes of the "running trades."

The railways, however, also submitted, as another exhibit, the "Advance Report on the Manufacturing Industries in Canada, 1934" published in 1936 by the Dominion Bureau of Statistics, and they referred to previous volumes of the same reports. Dividing total yearly remuneration paid by manufacturing industries by the number of employees, the average, it was pointed out, was appreciably lower than the average computed in the same way for railway employees.

If it be true that the admitted requirement as to a "reasonable and just" wage has been substantially satisfied, it then becomes a question whether the railways are at present able to pay and justified in paying more, or much more, by way of wage remuneration. This brings into the issue the

financial condition of the railways and the test to be applied to financial ability to pay.

The employees contended that "the ability-to-pay factor cannot, in fairness and in justice, be accepted as the determining factor when consideration is given to questions involving wage deductions" and submitted in support thereof a number of decisions of tribunals in wage disputes.

It is evident that in an issue such as this very careful definition is necessary. A doctrine expressed in apparently contradictory terms is of no practical value. In a broad sense, there can be no performance unless there is the ability to perform. An obligation may be imposed and penalties attached, but the practical result can follow only where ability exists.

The extensive exhibits submitted by the employees on this point covered the findings of courts or tribunals in fourteen wage disputes and extracts from a minority opinion in one other case. Of the fourteen findings, twelve were in the United States, one in Australia, and one in Great Britain. The minority opinion was in a case before a Conciliation Board in Canada. In eleven of the cases railways were involved, in two, street railways, and in two, mining companies.

The principal issue common to this selected list of cases was whether a company, financially weak, was justified in putting into effect a rate of wages lower than the prevailing standard rate. The findings on this issue are clear. The Arbitration Board in the case of certain employees vs. the Georgia and Florida Railway, 1914 (Case No. 6), which was particularly called to our attention as a governing case, stated:

"The employees have the first claim on the earning of a road for a reasonable wage to be determined not by the financial position of the Company, but by the rates paid by other roads in the same section of the country for like services."

And again:

"The recognized test in this matter is that of comparing the rates of pay, as proposed, with those in force on other lines operated through similar country, and under like conditions, so far as the same can be done."

In certain of the cases the principle that fair and just wages must be a first charge upon earnings was stated in somewhat more general terms. For example, the Commonwealth Court of Australia in its decision in a case against a mining company (Case No. 11), after pointing out that the immediate question was whether an employer who was poor should be ordered to pay as high wages as an employer who was rich, stated:

"If a man cannot maintain his enterprise without cutting down the wages which are proper to be paid to his employees—at all events, the wages which are essential for their living—it would be better that he should abandon his enterprise."

There is no suggestion in these cases that wages can be paid except out of "earnings," but if earnings are insufficient and cannot be increased the alternative contemplated is either the taking over of the enterprise by stronger groups or its abandonment.

Except that wages should be just and reasonable there is not much in these cases bearing on what the general standard, or "going" rate of wages should be, but in the most recent case cited, the report of an Emergency Board, *In re* the Louisiana, Arkansas and Texas Railway and Certain of its Employees (Case No. 15), it is clearly recognized that ability to pay is a factor in the making of standard rates. The following is the language used:

"As relating to the industry as a whole, ability to pay is a factor of consequences; if the national system is not taking in the money it cannot pay out the wages, and in a rough and tumble world the wages of employees must, to some extent, depend upon the affluence of their employers. But in a competitive market, the tendency is for an article, whether wheat, or cotton, talent or skill, to have a single price. Strong concerns pay the market price for the human services they require; and weak concerns are not exempted, because of their poverty, from the market price. If they cannot pay standard wages, they go into bankruptcy and their enterprises pass into other hands, or cease to be."

Unless the particular principle in these cases can properly be applied to differences in wages between Canada and the United States, it is not directly applicable in the case before us, in which practically the whole Canadian system of railways is involved, with uniform wage scales throughout. If these wage scales are well up to the competitive market price of labour in Canada and are in themselves fair and reasonable, then the earnings of the system clearly become a factor to be considered.

Moreover, it should be noted, all the principles and conditions which have influenced the decisions of wage tribunals do not emerge in the decisions in the above cases, which were selected from among the cases where wages were ordered to be maintained or increased. There have been many cases in which wage reductions were confirmed or ordered and grounds for such action were found. The findings of the Conciliation Boards in 1931 and 1933 in Canada are cases in point and other cases were referred to in argument.

The financial position of the railways is set forth in their accounts, the principal items in which for several years have been submitted to us. Questions have arisen as to whether only railway operations in Canada should be taken into account, or the position of the companies as the result of all their activities

and interests. Figures from both standpoints were placed before us.

In respect to the basic period, it would not be unreasonable to take averages for the four-year period, 1926-1929, as the standard of comparison. The railways themselves have suggested, however, that averages for 1926 and 1927, the two years of smallest revenues in the four-year period, should be taken. Combined gross revenues of the two companies from railway operations in Canada on the average in 1926 and 1927 were $441,814,316. In 1936, partly estimated as to the last month, the combined revenues were $292,000,000. This is a decline of something over $149,000,000 in gross revenues, or approximately 33 per cent. By comparison, wages in 1936 were at a decline of only 10 per cent, and the contention is that they should now be restored to the full scale prevailing under the higher revenues.

In 1931 a reduction of rates by 10 per cent was awarded, the condition of the revenues of the railways being one of the considerations before the Conciliation Board at that time. In that year the combined gross revenues were $318,803,765 as against $292,000,000 in 1936, when the wage deduction was again 10 per cent. Revenues in 1936, the year in which the present application for full restoration of rates was made, were still $26,000,000 short of those of the year in which the current wage deduction was formerly put into effect.

Gross operating revenues are perhaps the simplest single test having significance. If, however, variations in the value of money are applied to wages they should be taken into the reckoning in other factors. The railways would be affected mainly in the cost of supplies and of money for refunding or new capital. These effects would be reflected in the expenditures and therefore some account should be taken of the net position. Because of the difference in the financial structures of the two railways, the combining of figures to show a general net position is open to objection. The capital structure of the Canadian Pacific Railway is the much more favourable of the two and, indeed, in book values, in capitalization per mile, and in the proportion of stock to bonds, this company ranks high among the most satisfactorily financed corporations. To take its position as a test is therefore to present the best showing possible.

Net income of the Canadian Pacific Railway for the enterprise as a whole, before fixed charges and dividends, was in 1935, the last year for which figures are available, less than half that of 1926 and 1927, and was some 26 per cent less than that of 1931. Of the capital debt in 1935 of $964,008,399, at par value, $472,256,921, or 48·98 per cent, was in stock not carrying a fixed contractual rate of interest. Of this stock, $335,000,000 was ordinary stock, for which the owners paid into the company, on the average, $123 for each $100 share, and the balance was 4 per cent non-cumulative preference stock. No dividend on the ordinary stock has been paid during the last five years and on the preference stock during the last four years. Unquestionably, those who provided practically one-half of the company's property assets, such as roadbed, rails, locomotives, rolling-stock and buildings, contributed a share in the creation of the transportation values for which the company's revenues were received, and if this share of values does not appear, after other proper charges are made, then revenues are inadequate.

Even although no distribution was made to stockholders, the company had left on hand, after other disbursements, only the very small sum of $2,832,084. To fully restore the 10 per cent wage deduction would involve an additional yearly cost of approximately $8,000,000 for the Canadian Pacific Railway alone.

As to the Canadian National Railways, without taking into account any interest on loans from the Government but only fixed-interest debt due the public, there was in 1935 an income deficit of $48,878,182, which was made good out of the Dominion treasury. In 1926 and 1927 the corresponding income deficit averaged only $905,835. In 1931 the income deficit was $60,869,794; in 1932, $61,006,918; in 1933, $60,017,714; and in 1934, $49,506,695. All of these deficits were made good out of the Dominion treasury.

The case of the employees in reply, mainly negative, was that "the railways have at no point in these proceedings showed that they are not financially able to discontinue the 10 per cent payroll deduction." "We have admitted," they stated, "and now reiterate that management has been efficient," but they expressed the belief that there had been unwise extension of plant in the past, and that maintenance-of-way expenditures during the last year or two had somewhat exceeded current requirements. For these conditions the employees claimed they were no responsible and should not be "penalized." A different distribution of certain charges was suggested, but no general reconstruction of the accounts was attempted to show where money for increased expenditure on wages could be found.

If railway revenues are inadequate, relief may come from reduction of expenditures, from increase of traffic, from higher charges for services within the limits the traffic will bear, or from Government money votes. Borrowing from the money market for operating deficits is not a practicable recourse. The alternatives of higher freight and passenger

rates and of Government money votes, to include the Canadian Pacific Railway, are not, we feel, within the conditions to be considered by us. We have had no evidence as to what might be possible in the way of further economies or improvements in methods. We must, therefore, consider the problem from the position of revenues as at present derived and as affected, or likely to be affected, by expansion of traffic. Money for expenditures must be available from some source. The Canadian railway system, as represented in the parties before us, cannot go out of business, and ability to pay must exist or be created within it.

Many facts relating to general business conditions were laid before us. The evidence indicates that a considerable measure of recovery has developed since 1933, the lowest point in the depression, that improvement is continuing and that there are many signs of confidence in still further improvement. Railway revenues have also been rising within the said period and the rate of increase within recent weeks is definitely encouraging. Since 1933 and up to 1936, the combined operating revenues had recovered a little more than 25 per cent of the deficiency as measured from the 1926-1927 base. Wages in this period had recovered a still higher percentage of the deduction in effect in 1933. The proposals and declared intentions of the railways have been that wages will continue to share in further improvement. It is a question of times and proportions.

So far, the problem has been considered from the position of the railways within Canada. A considerable part of the employees' case dealt with the relationship of railway wages in Canada to those in the United States. In the basic period, 1926-1929, the scale of railway wages in the United States was represented as having been slightly higher than in Canada; the subsequent maximum wage deduction made by the United States railways was smaller, reaching only 10 per cent, and this had been fully restored in the United States by April 1, 1935. We can appreciate the place in the thoughts and feelings of the employees a contrast of this kind might come to occupy.

It should be noted, however, that the employees, very explicitly, do not subscribe to a general rule that rates in Canada and the United States should always be approximately the same. Their argument was rather that because the railway managements, and the Canadian Government, at times in the past, over the protest of the employees, who were of the opinion they were entitled to still higher wages, had fixed wage scales in Canada at the United States standard, they should in consistency have observed the same practice on this occasion.

As a precedent in this connection the employees quoted from the Order in Council (P.C. 1768) by which the McAdoo award, applicable to United States railways, was made effective in Canada in 1918. In the preamble to this Order in Council it was set forth as a consideration that "the railway companies are of the view that the wages paid railway employees in Canada ought to be the same as that adopted in corresponding territories in the United States, as the class of work is the same in both countries; that there is a large interchange of traffic, and that as a result, many employees work in both countries; and on the further grounds that different organizations are international in their scope, and that heretofore the wage scales in both countries have been relatively the same."

This view of the railway companies was, however, only one of five considerations recited in this preamble. Another was thus stated: "That in view of the increased cost of living, wages in Canadian territory should be increased as increased in American territory." The three remaining considerations related to ways and means. Standing first was an estimate of the added cost of the proposed wage increase to the Canadian railways, $36,865,494. Another consideration was the then "net earnings" position of the various railways, which showed them unable to meet the increased cost. The final consideration was, "that in order to enable the railways of Canada to meet the increased wage charges which they will be obliged to pay by reason of the increases hereinbefore referred to, the Minister of Railways and Canals believes that similar action ought to be taken in Canada as taken under similar circumstances in the United States and freight rates be raised in Canada as such rates have been raised in adjacent United States territory." It was accordingly ordered that upon acceptance of the new wage scale by the private railway companies the Board of Railway Commissioners forthwith prepare and make effective new freight rate schedules.

It was therefore recognized in this Order in Council that certain fundamental economic conditions, such as the value of money in one country as compared with the other, should be taken into account, that sufficient railway earnings must exist before additional charges could be paid, and that similarity in the opportunity to earn revenues must be created before a rule should be applied requiring similarity in wage scales as between the two countries.

When the basic rates were fully restored in the United States on April 1, 1935, an "emergency surcharge" in freight rates on a large number of commodities was granted to the United States railways. The railways were later advised by the Interstate Commerce Commission that these emergency charges "could not be regarded as a permanent remedy and that the railroads should undertake a revision of the rate structure to meet changed conditions." The emergency rates expired on December 31, last, and the hearing of the application for revision of the rate structure is now proceeding. The full restoration by the United States railways of the wage deduction in 1935 was strongly urged upon us as an example to be followed now by Canadian railways, but unless action in relation to freight rates were taken in Canada as was taken in the United States, the conditions in the two countries would not be similar in respect to the important consideration of opportunity to earn revenues. Policy as to freight and passenger tariffs is not, as we have pointed out, within the matters referred to us.

Separate national control and regulation of earnings must make the railways of the two countries into separate national systems. National policies, such as those in respect to development of resources, domestic and foreign trade, and price levels, create differences in operating conditions for these railway systems which are beyond their control. So do geography, climate, and the distribution of population. While there are many advantages in there being like standards and practices in the two systems, it seems reasonable to us that, in any particular case, similarity in governing factors should be established as a fact, before the example in one country can be urged as a fixed rule in the other.

This is essentially a conciliation board rather than an economic court. The economic elements of this problem, as we see them, have probably been sufficiently indicated in the preceding review of the evidence and arguments. An element not economic in character is the declared intention of the railways, from the beginning, to restore a certain definite money rate of wages as soon as financially possible. While whatever is done to implement this intention must be financially practicable, it may, under all the conditions, be justifiable that it should be the maximum practicable from time to time.

Under the conditions before us, that is, unless an increase in freight rates or government advances were granted, we do not consider the original contention of the employees, that the deduction in wages should be fully restored forthwith, or even within six months or one year, to be likely practicable. In arriving at this opinion we have taken into account all the evidences of improvement in general business and in traffic returns, with the probabilities of the continuance of this improvement even at a somewhat higher rate during the year. Moreover, we do not consider that the position of real wages at present, even taking into account the recent slightly higher trend in costs of living, are such that there is in fairness an immediate obligation on the railways to take all the risk, or an unreasonable risk, in anticipating the realization of revenues.

The original contention of the railways was that in consideration of all pertinent conditions no reduction in the wage deduction was at present warranted. However, they brought to our attention the proposal made by them in 1934, involving the principle of sharing between the railways and the employees any improvement in revenues, with adjustments to be considered quarterly. In conciliation conferences under the present proceedings the railways suggested a modified plan based on the same general principle. Combined operating revenues of the railways in 1926-1927 were nearly $442,000,000 and, in 1936, $292,000,000, the deficiency in the latter year being, in round figures, $150,000,000. Wages in 1936 were subject to a deduction of 10 per cent. The proposal was that as each one-tenth of the revenues, or $15,000,000, was recovered, one-tenth of the wage deduction, or 1 per cent, should be restored. If operating revenues for twelve months ending at any quarter year warranted a change, adjustment of wages was to be made effective one month after the end of the quarter year. To make the adjustment even more prompt, it was proposed that as each $7,500,000 of revenue deficiency was recovered, ½ per cent, or one-twentieth, of the wage deduction, should be restored.

To meet an objection to one aspect of this proposal, that under it there would be no immediate increase in wages paid, the railways then offered to put into effect a restoration of 1 per cent of the wage deduction on February 1, 1937, making the deduction on that date 9 per cent. The proposal embodying this offer was that instead of making the revenues of 1936 the basis, the revenues for the year ended December 31, 1935, should be taken and for every increase of $7,500,000 over the 1935 base, ½ per cent of the wage deduction should be removed. The 1935 revenues were $273,600,000, as against $292,000,000 in 1936. This difference of $18,400,000 would mean that a 1 per cent

reduction in wage deductions would have accrued by December 31, 1936, which would be made effective on February 1, 1937. There would remain on hand, as of December 31, 1936, $3,400,000 toward the making up of the next $7,500,000 of revenue increase, which would entitle the employees to a further ½ per cent in reduction of the deduction. Wages were not to move up and down, if revenues fluctuated, but any advance gained was to be held until a further advance was earned.

By thus moving back the base, while retaining the unit of calculation of $7,500,000, the railways would fully restore the basic wages before their revenues were fully restored. Figured from the 1935 base, all deduction from wages would be removed when revenues reached $423,600,000. The average revenues of 1926-27 were some $442,000,000. Thus basic rates of pay would be fully restored while revenues were still $18,400,000 short of those in the two years of smallest revenues in the basic period, 1926-1929. Revenues would still be $40,200,000 short of average revenues for the basic period as a whole.

The representatives of the employees definitely declined to entertain these proposals. They offered to make an agreement "based on the present 10 per cent deduction being reduced to 5 per cent, effective January 1, 1937, reduced to 2½ per cent April 1, 1937, and the remaining 2½ per cent to be eliminated July 1, 1937." They added in general terms, "We are still prepared to negotiate with a view toward reaching an agreement providing for the termination of the 10 per cent deduction by progressive steps." The railways held that a guarantee by them, unrelated to their revenues, of full restoration of wage rates within a short period, such as contemplated by the employees, would not be warranted, and direct negotiations between the parties were suspended.

The Board continued to explore the possibilities of an understanding involving some degree of compromise. On the practical side, the Board recognized that the employees might naturally desire something fixed and definite concerning their wages, and not something wholly contingent. On the other hand, the Board felt that, unless present wages were relatively unreasonable and unjust in themselves, the removal of wage deductions should, for the time being at least, bear some relation to realized earnings. If an acceptable formula could not be found that would carry the issue through to its final termination, it was important that an arrangement for at least the next twelve months should be made. Not only is this probably the shortest period it would be desirable that any wage arrangement should cover, but we were informed there is a working understanding to this effect between the railways and their employees.

Considerations also arise from the general condition of the transportation problem in Canada at this time. That Canada has a very big and serious transportation problem is realized by Canadian citizens generally. So far as the railways are concerned, their net income is at present insufficient to meet all charges proper to the industry. The increasing competition of transportation agencies on the highways is a factor the dimensions of which are not yet definitely determinable. How much betterment in the situation can be brought about by further reorganizations and economies, or how soon a reconsideration of the freight rate structure may be advisable, are not at the moment clear. The bearing of these conditions on the particular problem before us will be recognized, not only by the railway executives but also by the employees, as responsible citizens and because of their interest in the soundness of the business in which they are engaged.

Under all the conditions pertaining to this issue, and looking forward, now, for a period of twelve months, we are of the opinion that the rate of reduction of the wage deduction should not be considered out of relation to increases in revenues. When conditions are inter-related, there would seem to be fairness to both parties in the synchronizing of changes in the two factors as nearly as possible. In principle, the proposal of the railways does not seem to us to be open to objection on the ground of fairness. The measuring-stick the railways suggested has in its amended form been made more favourable to the factor of wages, and we cannot regard it as unfair as a temporary guide. The natural desire of the employees for definiteness in their wages, so that their individual budgets can be planned, remains to be considered. A fixed 1 per cent reduction in the deduction at the very beginning of the year 1937 would leave increases in income for the balance of the year wholly conditional. The prospect of substantially increasing revenues for the railways is good, but not without elements of uncertainty. Outside of the hazards of new world-wide disturbances, there are many local conditions that cannot at present be confidently calculated.

Even in the face of all contingencies, both the employees and the railways are very hopeful with regard to increase in traffic. The confidence in the outlook expressed before us

by the employees should give a feeling of great assurance to them about the returns that would accrue from a share in the increase. The railways, we have reason to believe, are prepared to consider further fixed reductions in the wage deduction during 1937 to correspond to the estimate of increase in traffic they feel justified in entertaining.

In view of all the facts and circumstances submitted to us, and according to the merits and substantial justice of the case, we, therefore, beg to recommend:

1. That the existing deduction from basic rates of pay of 10 per cent be reduced to 9 per cent on February 1, 1937, as proposed in conciliation conferences by the railways, and that further fixed reductions during the year be put into effect unconditionally, namely, a reduction to 8 per cent not later than August 1, 1937, and a reduction to 7 per cent not later than November 1, 1937.

2. That there be restored to the employees during the year further reductions of wage deduction whenever, and to the extent, percentages calculated on increases in gross operating revenues, in the following manner, are greater than the fixed percentages set forth above; the manner of calculation to be that for every increase of $7,500,000 in the combined gross operating revenues of the railways over the revenues of the year ended December 31, 1935 ($273,600,000), a reduction of ½ per cent in wage deduction should be accounted as having accrued to the employees; calculations to be made at the end of each quarter year, and whenever the percentage of accruals is higher than the fixed percentage then in effect or due, the higher percentage shall go into effect one month after the end of the quarter year; it being understood that the percentages calculated under this plan of contingent increases are not to be in addition to the fixed minimum percentages but are to be substituted for the latter whenever they would bring into effect a higher percentage of reduction in the wage deduction.

Under the terms of this recommendation there would be an assured reduction of 30 per cent in the existing wage deduction by November 1, next, with the prospect of greater or earlier deductions if revenues warrant, and with the prospect of a further reduction accruing in the quarter ending December 31, 1937.

We trust that this recommendation will be accepted as the basis of an agreement between the parties to cover the current year. We believe the terms and spirit of the recommendation are clear, but if it is accepted and any differences of view arise as to its interpretation or as to adjustments under it, the members of the Board, if so desired by both parties, would be glad to be called upon at any time during the year to advise as to a possible reconciliation of such differences.

Mr. Bancroft is unable to join in this report, and will submit a Minority Report.

Respectfully submitted,

(Sgd.) A. K. MACLEAN,
Chairman.

(Sgd.) W. SANFORD EVANS.

Ottawa, January 30, 1937.

MINORITY REPORT

In the matter of a dispute between the Canadian National Railways and Canadian Pacific Railway Company (subsidiary railways: Dominion Atlantic Railway, Quebec Central Railway, Northern Alberta Railways and Esquimalt and Nanaimo Railway), Employer, and various classes of employees of the said railways, Employees.

To the Honourable,
The Minister of Labour,
Ottawa, Ont.

Dear Sir,—The Board of Conciliation and Investigation appointed by you to inquire into the dispute between the railways and their employees, commenced its sittings in Montreal on November 23, 1936, in the Mount Royal Hotel. At various times since then, sittings of the Board were held in Montreal and Ottawa. In addition, many conferences were held between the parties themselves and between the parties and the members of the Board seeking a settlement of the dispute by conciliatory means.

At the first sitting in Montreal, after the members of the Board had taken their oaths of office, the Chairman read the commission giving the Board authority to proceed and indicated the nature of the dispute from the Reference to the Board by the Minister of Labour.

The following appeared before the Board to represent the parties to the controversy:—

For the Railway Companies:—

George Hodge, Manager, Department of Personnel, Canadian Pacific Railway Company.

A. J. Hills, Chief of Personnel, Canadian National Railways.

W. H. Armstrong, Office Engineer, Bureau of Economics, Canadian National Railways.

H. D. Brydone Jack, General Statistician, Canadian Pacific Railway.
J. R. Kimpton, Chief Clerk, Department of Personnel, Canadian Pacific Railway (Staff member).
J. L. Callaghan, Clerk and Stenographer, Department of Personnel, Canadian National Railways (Staff member).

For the Employees:—
Howard B. Chase, Assistant Grand Chief Engineer, Brotherhood of Locomotive Engineers.
H. H. Lynch, Vice-president, Brotherhood of Locomotive Enginemen and Firemen.
T. Todd, Vice-President, Order of Railway Conductors.
W. J. Babe, Vice-President, Brotherhood of Railway Trainmen.
W. H. Phillips, Vice-President, Order of Railway Telegraphers.
G. R. Pawson, General Chairman, Canadian Pacific Railway, Commercial Telegraphers' Union of America.
R. J. Tallon, President, Division Four; James Somerville, Vice-President, International Association of Machinists.
Thos. Broad, General Chairman, C.P.R., Brotherhood of Railway Carmen of America.
J. Thomson, Executive Board Member, Brotherhood of Boilermakers, Iron Shipbuilders and Helpers of America.
Frank Dinardo, Executive Board Member, Brotherhood of Blacksmiths, Iron Forgers and Helpers.
V. E. Bowlby, Executive Board Member, Sheet Metal Workers' International Association.
Ernest Inglis, Vice-President, and L. A. McEwan, Executive Board Member, International Brotherhood of Electrical Workers.
Jas. Gascoyne, Vice-President, Brotherhood of Firemen and Oilers, Roundhouse and Railway Shop Labourers.
W. V. Turnbull, Vice-President, Maintenance of Way Employees.
Frank H. Hall, Vice-President, Brotherhood of Railway and Steamship Clerks.
John Bruce, Vice-President, and F. Walsh, General Chairman, C.P.R., United Association of Plumbers and Steamfitters.
E. G. Primm, General Chairman, C.P.R., Brotherhood of Railway Signalmen.

More than sixty representatives of these seventeen international organizations were in attendance and Mr. Howard Chase, presented the case for the employees to the Board.

Messrs. George Hodge and A. J. Hills, prepared a joint statement for the railway companies and Mr. Hodge presented the case for the railway companies to the Board.

Practically all the railways in Canada are involved in the dispute and judging from the estimates given by both parties to the Board, approximately 83,000 to 85,000 employees are directly affected, and from 117,000 to 125,000 if those indirectly affected are included.

In the application for a Board of Conciliation, and which application is part of the reference to the Board by the Minister, the applicants—being the employees—state in part:—

"The Vice-Presidents' Conference Committee held conferences with the railways on May 14 and July 6, and on September 15, 1936, a further conference was held with the railways, during which the General Chairmen's Conference Committee was present with the Vice-Presidents' Conference Committee. In all of these conferences the representatives of the employees have contended that the agreement of November 3, 1934, should be cancelled, thereby eliminating th deduction of 10% (ten per cent) from the employees' pay cheques, and restoring to full force and effect the basic rates provided for in the respective agreements, as between the railways and its employees."

During the negotiations preceding the application for a Board, the railway companies declined to restore the ten per cent deduction, or any part of it. Thereupon the employees applied for a Board of Conciliation and the Minister of Labour granted the application.

There is one item in the dispute before the Board. The employees asked the railway companies to eliminate the ten per cent deduction from their pay cheques and restore the basic rates of pay existing in the agreements between the railways and the seventeen railway organizations. The railways declined to do so, and couldn't see any good reasons for restoring any part of it.

Although the dispute is confined to one item, yet, due to the magnitude of the parties involved, this item represents approximately $18,000,000 a year, or according to the evidence of the railways, $17,152,000. Both sides used $18,000,000 when referring to the amount required to restore the wages and salaries to pre-deduction levels.

It is obvious that the large sum mentioned merely reflects the tremendous number of employees involved. For the first time in the history of Canadian railways, these seventeen international organizations have unitedly negotiated with the railways and unitedly presented their case before a Board of Conciliation. The railway companies—as the Reference indicates—are united for the purpose of wage negotiations and for the presentation of their case before the Board. Naturally the figures are large when figuring a ten per cent restoration in the annual payroll for all these employees.

The evidence shows that the employees, during the past five years, have had their pay

cheques reduced, first by ten per cent, then twenty per cent, later restored to fifteen per cent, then twelve per cent and finally ten per cent. The fact that these deductions have amounted to approximately $91,000,000 taken from pay cheques during the past five years again reflects the great number of employees under consideration. The present ten per cent deduction has been in force since May 1, 1935, as a result of an agreement dated November 3, 1934.

The evidence shows that during the earlier years of the depression, the operating revenues of the railway companies substantially declined. The railway companies indicate that the level of operating revenues for 1936 was approximately $190,000,000 below the average of the peak years of 1926 and 1929, and that the operating revenues in 1936 are about $25,000,000 below the level of 1931. All of which goes to show the magnitude of the interests to be considered.

The relations between the officials of the railways and the representatives of the employes have been, and are, friendly. The negotiations during the proceedings and the presentations before the Board indicated the excellent relationship between the parties.

Both sides presented their case with care, keenness and thoroughness, as the voluminous evidence indicates. Despite the friendliness, it should not be overlooked that the representatives of the employees declared that they were absolutely and resolutely in earnest regarding their request for the abolition of the ten per cent deduction. The representatives of the railways were just as firm and serious in declaring that the railways could not afford to accede to the request and couldn't see any just reasons for restoring any part of it. In these two positions the parties were deadlocked at the beginning of the proceedings before this Board.

History of Wage Deductions

On September 15, 1931, the Canadian National Railways and the Canadian Pacific Railway Company asked for a ten per cent payroll deduction to be effective October 1, 1931, to December 31, 1932, basic wage rates to remain unchanged. This request was made to the representatives of the engineers, firemen, conductors, trainmen, and telegraphers. Conferences were arranged, but no settlement was reached. After giving formal notice for a revision of existing agreements, to bring about a ten per cent reduction in the specified rates of pay, the companies applied for a Board of Conciliation under the Industrial Disputes Investigation Act.

The majority report of this Board was dated November 30, 1931, and recommended a ten per cent reduction in the basic rates of pay. The railway companies at once put the award into effect. The employees declined to accept the award. Conferences were held between the companies and the representatives of the engineers, firemen, conductors, trainmen and telegraphers, with the result that on February 4, 1932, an agreement was reached between these employees and the railway companies, providing for a ten per cent deduction from pay cheques. The agreement was effective from December 1, 1931, to January 31, 1933, with provisions for notice by the management after December 1, 1932, if an extension of the agreement was desired. Deductions from the employees' pay cheques from November 15 to November 30, 1931, were returned. Similar agreements were made by other classes of employees. The Brotherhood of Railway and Steamship Clerks, etc., made a one-year agreement effective March 1, 1932. The mechanical trades, represented by Division 4, Railway Employees' Department, made an agreement effective April 1, 1932, and the Brotherhood of Maintenance of Way Employees came next with an agreement effective May 1, 1932.

These special arrangements provided for deductions from pay cheques. The existing agreements between the employees and the railways were undisturbed, and it was plainly stated that the basic wage rates in such schedules were to remain unchanged. Such has been the arrangement all the way down to the present time, when the agreements existing are undisturbed and the basic rates in the agreements untouched.

On November 30, 1932, the engineers, firemen, conductors, trainmen and telegraphers were informed that the railways would be unable to discontinue the ten per cent deduction after January 31, 1933. On January 28, 1933, the railway companies served formal notice upon these employees, seeking a twenty per cent reduction below the basic rates of wages existing prior to December 1, 1931. The railway companies applied for a Board of Conciliation. On April 25, 1933, the majority members of the Board reported to the Minister of Labour; they recommended a twenty per cent deduction in wages. On May 1, 1933, the railway companies put into operation a twenty per cent deduction from the pay cheques of the employees in these classes.

The railway companies served notice on the representatives of the other classes of employees of their desire to increase the deduction from pay cheques by an additional ten per cent, making twenty per cent altogether.

The "running trades"—engineers, etc., outlined previously—endeavoured to convince the railway companies that the order imposing a twenty per cent deduction should be rescinded. Being unsuccessful, the employees in the "running trades" took a strike vote. This occurred during the negotiations between the railways and other classes of employees. The situation was such that the Prime Minister urged that a further effort be made by the parties to reach a settlement.

On October 28, 1933, a settlement was reached and an agreement signed providing for a fifteen per cent deduction from pay cheques. This agreement was effective November 1, 1933, for one year until October 31, 1934, when the deduction was to be set at ten per cent. The usual notice requirements were included to enable either party to change the situation. Agreements followed between the companies and other classes of employees along similar lines, with this exception, that the added five per cent, making the total fifteen per cent deduction, should not apply to employees working less than forty hours a week, or to those who had accepted lower paid assignments amongst the comparatively lower paid employees

The railway companies on September 25, 1934, notified the representatives of the "running trades", that they were unable to make effective the ten per cent deduction on November 1, 1934, and desired to continue the fifteen per cent deduction after that date. Similar information was given to other classes of employees with existing agreements. Arrangements were made by the seventeen railway organizations involved, to handle the wage controversy together. A conference committee was formed and arrangements made with the railway companies to handle the matter in a united way.

On November 3, 1934, an agreement was reached and signed and was the basis of the agreements entered into by the various classes of employees represented by these seventeen railway organizations.

The required notice having been given after July 1, 1935, to end the arrangement by termination of the 10 per cent deduction, and many conferences between the parties proving unsuccessful to break the deadlock, the employees applied for a Board.

Wage Deductions in the United States and Canada

The contentions of both parties to the dispute, relative to wages in Canada and in the United States, suggests that the history of wage deductions could not be complete as far as the railways are concerned, without a glimpse at the situation in the United States.

The railway companies contend that since the Great War conditions have altered between the United States and Canada. They point out that the United States became a great creditor nation; and that the advent of the New Deal policy has further removed the railway employees in the United Stafes from comparison with railway employees in Canada. It is urged that railway wages in Canada should be governed by Canadian conditions.

The employees claim that United States wages and conditions were imposed upon them—against their wishes—during the time of the McAdoo award in the United States. This was accomplished, it is stated, by the companies urging the adoption of this well-known award and the Government of the day providing for it in a Privy Council Order No. 1768. The representatives of the employees affirm that the Canadian Railways have followed United States wages and conditions when to their advantage, and have ceased to do so when it is to the advantage of the employees. They claim that at no time during the depression have the railway employees of the United States suffered more than a ten per cent deduction in wages, and the basic rates were completely restored on April 1, 1935, and also that the United States Railways were not in as good a position to do so at that time as the Canadian Railways are at the present time.

From the evidence, it seems that, effective February 1, 1932, an agreement was reached between the railway companies in the United States and their employees, establishing a ten per cent deduction from pay cheques for one year, this arrangement to terminate at the end of the year.

In December, 1932, the railways in the United States successfully obtained from the employees, by agreement, an extension of the ten per cent deduction until October 31, 1933. Notice could be given for modification after June 15, 1933. This agreement for a ten per cent deduction was again extended until June 30, 1934, when it was to end unless another extension was made.

The railways of the United States, on February 15, 1934, informed the employees that the railways desired to increase the deduction to fifteen per cent, effective July 1, 1934. The employees would not consent and after extended conferences, an agreement was reached providing for the gradual elimination of the ten per cent deduction in the follow-

ing way:—2½ per cent on July 1, 1934; 2½ per cent on January 1, 1935; and 5 per cent on April 1, 1935. This agreement was dated April 25, 1934, and under it the basic rates of pay in the agreements existing were restored and the deductions wiped out.

The evidence indicates that the introduction of the McAdoo award, both in the United States and in Canada, was accompanied by certain concessions in freight rates. It is claimed by the representatives of the railways that the restoration of the ten per cent deduction in the United States was accompanied by an emergency freight rate increase. However, as the evidence shows, the agreement made between the railways and their employees in the United States, and dated April 25, 1934, provided for the full restoration of the 10 per cent as follows: 2½ per cent July 1, 1934; 2½ per cent January 1, 1935; and 5 per cent April 1, 1935. The emergency freight rates came into effect on April 1, 1935, and expired December 31, 1936, and according to latest information have not been renewed. The elimination of the 10 per cent deduction in the United States commenced July 1, 1934, and it was complete on April 1, 1935. The emergency freight rates came into effect in April, 1935, and expired at the end of 1936. It is stated that a general revision of freight rates in the United States will be sought by United States railways.

Whatever weight may be given to this matter, it is evident that the depression deductions in the United States from pay cheques were wiped out on April 1, 1935, and the employees on railways in Canada are at present working under a ten per cent deduction from their pay cheques.

It is quite apparent that Canadian railways have terminated the ten per cent deduction for their employees in the United States on 6,738 miles of lines, which the Canadian railways operate, and United States railways operating in Canada, have terminated the ten per cent deduction for their employees on 1,496 miles of lines which they operate in Canada. These employees have been enjoying their basic schedule rates since April 1, 1935. In some cases the employees on United States lines in Canada are paid a considerably higher basic rate than similar employees on Canadian lines.

Cost of Living

So much of the evidence centred around the "real wage," as the companies called it, and the emphatic protest of the employees to this being considered, that any report should not overlook this significant part of the controversy.

The railway companies pressed the point that the indexes* compiled by the Department of Labour and the Dominion Bureau of Statistics did show the changing cost of living and that was the only way in which the railways had used the indexes. A great many of the tables and some charts filed by the railways were based upon the changes found in these indexes; and many of their arguments centered around the "real wage" as indicated by the changes in these indexes.

The employees attacked the cost of living figures, upon which the railway companies based their idea of a "real wage." In emphatic language they condemned the "real wage" of the companies, because they declared the figures upon which it was based were related to antiquated and outmoded studies and the indexes did not even show the trend of the cost of living. They certainly objected to the measuring stick to show the value of money when the measure was faulty and utterly unreliable, and claimed that those who compiled the indexes did not make any such claim for them as the company had in using them to base a measure of money values.

Both sides argued the different positions so extensively that it may be a good thing to see what authorities have to say on the subject. From studies made on this subject by distinguished and expert statisticians, and resulting from a conference at the International Labour Office in Geneva in May 1930, extracts from the conclusions reached by such experts are to be found in the evidence of the employees as follows:—

"The following resolution prepared by the Committee on Cost of Living Indices, and adopted by the Second Conference of May 1930 is particularly significant:

'In view of the fact that international comparisons of cost of living, which are the bases of all international real wages comparisons, are defective because of the lack in various countries of adequate recent comparable budget studies, the Committee recommends that the various countries which have not made family budget enquiries within the last five years be requested to make a new and comprehensive study of the budgets of working-class families; to conduct these enquiries as soon as possible (and not later than the end of 1932); and to take account of the studies on these subjects issued by the International Labour Office and Recommendations made by the several Conferences of Labour Statisticians.'

"In the section of the Report on the Conferences dealing with the existing wage

*Indexes and Indices are synonomous.

and cost of living material of the six countries studied, we find the following conclusion with respect to cost of living indices:—

'The section dealing with the cost of living indices shows the same variety of methods from one country to another. To some degree this is only to be expected since habits of consumption vary greatly and the methods of compilation of statistics will necessarily reflect this. *The outstanding fact, however, in these six countries, is that the actual methods of weighting the different items included are not based upon recent and detailed studies of the consumption habits of the working classes but upon estimates which are centered around fragmentary and often out-of-date budget investigations.*

In the United Kingdom the results of a 1904 enquiry and in the United States those of a 1918 enquiry are utilized. In Germany the present weighting is a theoretical modification of 1907 conditions. *In Canada there is little exact information of family budgets.* In Italy again, the weights are largely theoretical and the continuous indices 1921-31 relate only to individual cities. In France the cost of living index for Paris is the most reliable but there has been no recent enquiry into working-class family budgets.' (*Emphasis ours.*)

"It will be observed that Canada is the only country for which no budgetary studies have been made, while the others are largely using budgets which are well out of date. It is quite apparent, therefore, that criticism of the cost of living indexes for Canada compiled by the Department of Labour and the Dominion Bureau of Statistics is well founded. This is further supported by actual examination of the indexes themselves.

"It may be pointed out", replied the railway companies, "that the matter relating to the International Conference at Geneva has reference largely to the difficulty of making international comparisons. It is quite obvious that the criticisms were not intended to apply to the use of an index in the countries of issue to indicate the *changing* cost of living, which is the only basis on which the Railways have ever used the Canadian cost of living index."

It is clear, that the basic rates in the schedules are not in question or the differences in rates of pay between certain classes of employees. But the railway companies have emphasized the point, that the *changing* cost of living as revealed by the indexes is a cogent reason for not restoring the deduction from pay cheques at this time.

Taking all the evidence of both sides upon this subject, the conclusion is inescapable, that the "real wage" idea of the railway companies is based upon information not accurate enough to have any important bearing on the question of the elimination of the ten per cent deduction, or upon the greater question involving the economic welfare of approximately 117,000 employees and their families in the Dominion of Canada. It is fair to assume that the employees are mostly married men.

In fairness to the compilers of the indexes, which have been the centre of argument on this subject, the difficulty is often due to parties using the indexes far beyond the purpose of the figures and against the warning of the compilers that these figures can only be used within the limitations imposed.

Wages on Canadian Railways

One difficulty encountered during the hearings was to obtain accurate information as to what the employees of the railways in Canada actually earned during 1935. Both parties used averages obtained from the figures of the Dominion Bureau of Statistics.

The presentation of the individual earnings of such a number of employees would be a real task. The employees insist, that the railway companies have the information, because they have to make a return of the earnings of the employees to the Income Tax Department. However, the nearest approach to this subject was by way of average monthly earnings of various classes of employees.

The employees compiled a number of tables from the figures provided by the Dominion Bureau to show the average monthly earnings of more than 116,000 employees. The results were strenuously objected to by the railways. The representatives of the railways, taking the same source for their figures, compiled elaborate tables to show the hourly rates of all these employees, and claimed the result showed a favourable comparison with other industries in Canada. The employees rejected these results with emphasis, claiming, in effect, that the railways knew very well that the employees in the "running trades" were not paid upon an hourly basis; that their basic rates were primarily and fundamentally based upon a monthly mileage basis with certain provisions made for some mileage and time worked by the hour. They objected to the railways' method of using the figures in question.

One outstanding fact about the wage situation came from each side during the presentation of these masses of figures. Said the employees, concluding a survey of average monthly earnings: "More than one-half of the Canadian railway employees received average monthly earnings of less than $110 in the year 1935." The railways replied: "To show the fallacy of such a conclusion, it is only necessary to say that on the same basis of argument, all railway employees in Canada earned less than $115 per month, BECAUSE THE AVERAGE EARNINGS OF ALL EMPLOYEES WERE $113 PER

Month. It is to be borne in mind, of course, that this general average is affected by the unavoidable short-time work of many employees."

The railway companies give the average monthly earnings for all employees in 1935 as $113 per month. It is true that short time and reduced mileage enters into it, and that is what the employees claimed in their brief, that in addition to the ten per cent deduction from pay cheques, that the lost time, reduced mileage and demotions, had decreased their earnings.

The employees contended that the popular conception of high wages on Canadian railways was due more to "vivid imagination" than accurate data. It is quite easy for the railways to select groups of highly skilled and responsible employees and show comparatively good wages compared with other industries, because wages in this case reflect great skill and responsibility among other things. It is just as easy for the employees to select groups of lower paid employees and use their wages for an argument.

The railway companies Submission No. 8 is entitled "Wages and Hours of Labour in Canada, 1929, 1934 and 1935."

In this publication is given the minimum rate of pay for labourers in the civic service in the city of Toronto. The hourly rate is given as ·594 for a forty-four hour week in 1935. That works out at $26·136, or for a short four-week month $104.54. These are the figures in the railway submission. The railway companies affirm that the average for all employes is $113 per month in 1935. It is true that if all the employees were working full time the average would be higher.

This surely bears out the contention of the railway employees that there is a misconception about the so-called high rates of pay on Canadian railways, and if there are comparative good wages paid to certain classes, it is because of the skill, responsibility and training, among other things, of these employees.

These figures are indicative of the actual earnings of the employees during the year 1935 One thing which must be remembered is that the Board of Conciliation is to recommend what wages are to be paid in 1937, and not 1935 or 1936.

Ability to Pay Factor

A great deal of evidence was submitted on this factor and the parties are not a long way apart on this subject.

The railway companies state: "The railways feel that inability to pay something more than is fair and reasonable may properly be put forward as a factor in the dispute," and again, "Admittedly reasonable and just compensation for the employees is a first charge on any enterprise."

Said the employees: "It is the position of the employees that the ability-to-pay factor cannot, in fairness and in justice, be accepted as the determining factor when consideration is given to questions involving wage deductions. A proper and sufficient earnings or income for employees is, and must be, the first charge and responsibility to be met by employers. This charge, as a matter of social justice and economic necessity, must be met before consideration is given to the payment of interest or dividends. We do not assert this obligation as a newly conceived principle of economic justice; we merely repeat it as being a principle which has long been recognized, established, and endorsed by courts and by wage tribunals, upon which responsible and outstanding representatives of employers, employees and the public have served."

In support of this contention, the employees submitted fourteen decisions rendered in the United States, Canada, Great Britain and Australia, to show what various tribunals had decided. Nearly all of these decisions were connected with railways and their employees. It was contended that general support was given in these cases to the claim that ability to pay should not be used as a determining factor in arriving at wage rates, and certainly not regarding the restoration of wage deductions.

The railways agree that, as related to the payment of a fair and reasonable wage, ability to pay cannot be accepted as the determining factor.

Financial Position of the Railways

A great deal of the controversy centered around the railway companies Submission No. 6, being financial statements showing the net income of these railways from 1926 to 1935. The net railway operating income for 1935 is shown as $6,054,882 for the Canadian National Railways, compared with a deficit of $2,843,935 in 1931, when the first deduction in wages occurred; and the employees argue, that this net result for 1935 was obtained in conjunction with extraordinary maintenance work in advance of requirements, or anticipated maintenance work, which would have added at least $1,000,000 to the net railway operating income, if the maintenance work had been normal. The employees do not criticize this work, but feel it should not be used as a means of preventing the restoration of basic rates of wages.

The real disagreement over net figures was on the $2,832,083 balance of the Canadian Pacific Railway Company in 1935. The employees point out that if the income account of the Canadian Pacific Railway in 1935 had

been compiled in the same manner as it was in 1933 and 1934, the balance would have been $6,383,080.

My colleagues, in their report, refer to this balance as follows: "Even although no distribution was made to stockholders, the company had left on hand, after other disbursements, only the very small sum of $2,832,084." This refers to the balance of the Canadian Pacific Railway in 1935.

That the viewpoint of the employees is correct, claiming the balance in the income account of the Canadian Pacific Railway would be over six millions in 1935, if the account had been compiled in the same manner as 1934, is shown by the following quotation from the report of the Canadian Pacific Railway to its shareholders in 1935.

"CANADIAN PACIFIC RAILWAY COMPANY

Fifty-fifth Annual Report of the Directors of Canadian Pacific Railway Company, Year ended December 31, 1935.

To the Shareholders:

The accounts of the Company for the year ended December 31, 1935, show the following results:

INCOME ACCOUNT

Gross earnings		$129,678,904 57
Working expenses (including taxes)		107,281,380 60
Net earnings		22,397,523 97
Other income—net		8,145,494 31
	$	30,543,018 28
Deduct provision for depreciation of Ocean and Coastal Steamships*		3,550,996 64
	$	26,992,021 64
Deduct fixed charges		24,159,937 83
Balance transferred to Profit and Loss Account	$	2,832,083 81

* In 1934 provision for such depreciation, amounting to $3,783,660.01, was deducted from Profit and Loss and Surplus Revenue Account."

The first presentation on the financial situation of the railways came from the employees. From the tables and analysis filed by them, they argued that the total special income account of the Canadian Pacific Railway had increased in 1935 to $8,145,494 and "included therein was an increase of $1,177,750 in the cash distributions received from the Consolidated Mining and Smelting Company Limited, in which the company has an interest amounting to $8,412,500. This is another indication of improving business."

A survey of the stock holdings of the Canadian Pacific Railway showed that 16·84 per cent of the ordinary stock was held in Canada and the rest outside, and only ·28 per cent of the preference stock was held in Canada. This was in 1935, and the figures agree with the annual report to the Canadian Pacific Railway shareholders regarding the stock holdings. The intention of the employees, it seems, in submitting this survey of stock holdings, was to strengthen their side of the argument which developed later between the two parties, as to whether it was the best thing to restore the deduction in wages or purchasing power in Canada, before resuming dividends on the stock, which is so largely held outside of Canada.

Another table filed by the employees was to show the growth of surplus and profits from sale of capital stock at a premium. In connection with this, they state: "The employees have submitted a statement showing the surplus accumulated earnings and from premium on capital stock sold in previous years. At the end of 1935 that surplus amounted to $206,217,575, or 43 per cent of the approximately $472,000,000 of capital stock outstanding. It is true that this amount of $206,217,575 is not in cash, but it nevertheless represents tangible assets equivalent to 43 per cent of the capital stock," and later in the evidence: "Mr. Hodge stated in his testimony that the return of 1·957 per cent on investment in the year 1935 was calculated on $1,144,445,232 investment in railway property. The total capitalization which amounts to $971,649,170 indicated that in the past $172,796,062 of earnings has been ploughed back into the property, thus enhancing the value of the stockholders' investment."

Regarding the foregoing subject, the employees answered: "We desire to refer to the statement of the railways that the return on investment for the Canadian Pacific in 1935 was 1·957 per cent, as compared with an average of 4·325 per cent during the years 1926 to 1929 inclusive. From the *Yearbook of information* published by the Committee on Public Relations of the Eastern Railroads (United States), we observe that, in the year 1935, the return on property investment of Class 1 Roads in that country was 1·94 per cent, while during the years 1926 to 1929 inclusive, such returns ranged from 4·30 per cent to 4·99 per cent, so that the Canadian Pacific is in relatively as good position as those lines in the United States, which have discontinued the 10 per cent payroll deduction"

The employees' tables show the current assets and liabilities of the Canadian National Railways and the Canadian Pacific Railway, from 1923 to 1935, and claim "the Canadian Pacific Railway was in a better current financial position than in 1923, and in as

good a position as at some of the intervening years." In another table, operating revenues are shown by the month for the years 1931 to 1935, and for nine months in 1936, for the Canadian Pacific Railway, and after comparing the current position and increasing revenues, the employees declare: "We do not believe it can be said that any concern which has come through this depression without failing in any year to show a net in excess of its fixed charges, even with an increase in those fixed charges of $5,000,000 during the period, notwithstanding which the net shows a progressive improvement since the low point of the depression, is not in position to discontinue the 10 per cent payroll deduction."

"No doubt the company", stated the employees in their first presentation, "will point to the fact that no dividend on either ordinary or preferred stock has been paid since 1932, but we call attention to the fact that over a long period of years, extending back to 1893 in the case of preference stock, and back to 1911 in the case of ordinary stock, a dividend of 4 per cent on preference stock and 10 per cent on ordinary stock has been unfailingly paid. Even in 1930, when the depression was well under way, the amount paid in dividends was the greatest in the history of the company. In 1931 the usual dividend on preference stock was continued and that on ordinary stock amounted to 6½ per cent; and again in 1932 the amount appropriated from revenues for dividends on preference stock amounted to a half yearly dividend on that stock."

In connection with Railway Submission No. 6, which is the financial statements of the Canadian Pacific Railway and the Canadian National Railways, the railway companies explained in part:

"The statement for the Canadian National Railways shows that in 1935 their net railway operating income was $6,054,882 as compared with an average of $31,943,168 for the years 1926 to 1929 inclusive, during which years the existing basic rates of pay became established. The deficit on income account, exclusive of interest on Dominion Government Account, in 1935 was $48,878,181.67 as compared with an average of $3,145,368 during the former years mentioned. This item, as stated, is exclusive of interest on Dominion Government loans, which as shown in the Annual Report for the year 1935 amounted to $35,949,676.70. The net railway operating income in 1935 produced a rate of return on the investment of only ·316 per cent as compared with the even low average of 1·78 per cent during the period between 1926 and 1929.

"The statement of the Canadian Pacific Railway shows that in 1935 the company had a net railway operating income of $22,379,524 as compared with an average of $46,255,222 between 1926 and 1929 inclusive. During the year 1935, the Company had a surplus of $2,832,084 as compared with the average surplus of $9,267,911 during the earlier years mentioned. It must be pointed out, however, that the surplus during these four earlier years was secured after paying dividends in those years averaging $32,214,464 per annum. In 1935 no dividends whatever were paid, nor were there any paid in 1933 or 1934. A dividend of only 2 per cent on preference stock was paid in 1932. Common stock shareholders have not received any dividend whatever since 1931. In 1935 the railway operating income provided a rate of return on the investment of only 1·957 per cent as compared with an average of 4·325 per cent during the years 1926 to 1929 inclusive.

"The returns thus far in 1936 have not materially affected these comparisons insofar as net returns to the Railways are concerned. From January to September inclusive, the combined operating income of the Canadian National and the Canadian Pacific Railways increased $14,595,877. Their operating expenses, however, increased $14,678,981."

My Colleagues on the Board following a resume of the financial statement of the railways, observe: "The case of the Employees in reply, mainly negative, was that 'the railways have at no point in these proceedings showed that they are not financially able to discontinue the 10 per cent payroll deduction.' and later 'A different distribution of certain charges was suggested, but no general reconstruction of the accounts was attempted to show where money for increased expenditures on wages could be found.'"

I cannot agree that the employees' position in this respect was "mainly negative." On the contrary, they made a great effort to show the improved financial condition of both the railway companies to convince the Board, and the railway companies, that the 10 per cent deduction should be restored. They pointed out, among a host of reasons in favour of their plea, that on the Canadian National Railways in 1931, when the first 10 per cent deduction was made, the net railway operating income deficit was $2,843,935, and that in 1935 this had turned into a net railway operating income surplus of $6,054,882. Further had it not been for extraordinary maintenance work it would certainly have been over $7,000,000 in 1935; and they claimed the maintenance work will benefit the future and will result ultimately in a better net position for the Canadian National Railways. They also pointed out that while the income or deficit, before interest charges due on Government loans, was $61,006,918 in 1932, nearly the same as in 1931 when the first deduction was imposed; that in 1935 it was reduced to $48,878,182; and it is expected that 1936 will show an improved position.

They indicated the improved position of the Canadian Pacific Railway at great length,

and it is not necessary to repeat any of the figures already mentioned in the report, because my colleagues state in their report: "The capital structure of the Canadian Pacific Railway is the much more favourable of the two and indeed, in book values, in capitalization per mile, and in the proportion of stock to bonds, this company ranks high among the most satisfactorily financed corporations. To take its position as a test is, therefore, to present the best showing possible."

Why the majority members of the Board should say that no general reconstruction of the accounts was attempted, it is difficult to surmise. Should the employees have employed auditors to reconstruct the accounts from the companies' records, or should the Board have done so?

The employees have endeavoured to show that both railways have so improved their financial position during 1935, with every indication of greater improvement during 1936 and 1937, that the deduction from pay cheques should be eliminated. They gave the figures to warrant their claim, in their opinion, and argued that the employees were giving more service per dollar of compensation than ever before. They called it greater productivity of employees. A great many illustrations of this were filed by them. Greater efficiency in every way was admitted by both parties and it is shown that the general efficiency and maintenance of the railways is second to none on this Continent. This condition was due to the co-operation of capital management and employees. In addition there is positive evidence of the improvement in business in 1935—again in 1936—and increased expectation for 1937.

The railway companies are of the opinion "that the employees with a reduction of only 10 per cent in compensation, compared with compensation calculated under basic rates of pay established during the years 1926 to 1929 inclusive, might properly consider themselves as in an extremely fortunate position, particularly having regard to the fact that during recent years the shareholders' return on their investments necessarily has had to be cut 100 per cent." And the railways suggested that the shareholders are entitled to some consideration before the employees can justly claim to be entitled to any further improvement in their rates of pay. The operating revenues of the railways in 1935 were $273,558,755 as compared with $318,803,765 in 1931, a decrease of $45,245,010 or 14·2 per cent, pointed out the companies, who argued that the present money value of the wages received, judged from the cost of living indexes, places the employees in as favourable a position as the wages received before the first ten per cent deduction in pay cheques.

Replying to railway companies Submission No. 6, the employees observe "there is shown for the Canadian Pacific as Other Income an amount of $4,594,498 for 1935 as compared with $6,663,793 Other Income for the year 1934. This would indicate a decrease in Other Income, but as a matter of fact, Other Income for 1935 amounted to $8,145,494." And again: "This exhibit also shows Net Income for the Canadian Pacific for the year 1935 as $2,832,084, whereas as a matter of fact, it was $6,383,080, if calculated on the same basis as 1933 and 1934."

The railway companies opposed the termination of the wage deduction in part, upon the claim, declared the employees, first, that increased income could be given to shareholders, and second, that companies manufacturing railway supplies and equipment would be able to expand their activities on the basis of railway orders. "If", said the employees, "the railways resume payment to their shareholders, the greatest part of the money thus distributed will, of course, leave Canada." And later: "But we cannot conceive of anyone seriously contending that the business activity and the ultimate general prosperity of the Dominion of Canada will be better promoted by a distribution of dividends to shareholders, than by a distribution of wage payments to employees. If this is to be a factor in your deliberations—and we believe it should be—certainly there is here powerful reason for the immediate termination of the payroll deduction."

From all the foregoing, it is amply demonstrated that the railway companies, with great care, presented the financial situation of the railways, from their viewpoint, and that the employees did the same, and made every effort to show by the improved position of the railways, how the railways could well afford to consider restoring the ten per cent deduction in wages and the basic rates.

Conciliation Conferences

The members of the Board directed their efforts to bringing the parties together for the purpose of reaching a settlement of the dispute after all the main evidence was submitted. These efforts didn't finally succeed as the reports of the members of the Board to the Minister attest.

One great obstacle to a voluntary agreement, through conciliation, was the precipitation

into the dispute of an idea that the restoration of the 10 per cent deduction should be based on increases in gross operating revenues. The railway companies from the commencement of these conferences, suggested a gradual restoration of the deduction from pay cheques, upon a formula based upon the increases in gross operating revenues from time to time. The companies felt that they could not afford to gamble on the expectations of increased operating revenues during 1937. The employees declared definitely that they would not accept gross operating revenues as a measure for their wages; and also, that the employees would not make any agreement with the railway companies which was based wholly, or in part, on a formula based upon gross operating revenues.

During the conferences both parties to the dispute modified their original positions. The employees' position at the beginning of the proceedings was for the restoration immediately of the 10 per cent deduction. Their position during the conferences was outlined in a suggestion for settlement by a gradual restoration of the 10 per cent in the following manner: 5 per cent January 1, 1937; 2½ per cent April 1, 1937, and reverting to basic rates on July 1, 1937.

The railway companies' position at the beginning of the proceedings was that they could not afford to restore the 10 per cent and couldn't see any just reason for restoring any part of it at the present time. The railway companies agreed during the conciliatory conferences between the parties, to guarantee a restoration of 1 per cent on February 1, 1937, and any additional restoration earned under a formula based on increases in gross operating revenues. At a later date the railway companies were favourable to guaranteeing 1 per cent February 1; 1 per cent August 1; and 1 per cent November 1, 1937, with any additional restoration which the formula would provide after taking into consideration the guaranteed returns.

In my opinion, the employees are right in rejecting gross operating revenues as a means of measuring their wages. Not because there is no precedent for it, as far as the evidence goes, but because it cannot lead to anything but controversy and dissatisfaction. What logical reason is there for endeavouring to force this formula on the employees, when they say definitely they will not make any agreement with the companies based upon it. That position in itself may not dispose of the merit of the suggestion—if it has any—but it does raise an obstacle to a settlement. If the railways believe that this formula will give something in addition to a guaranteed return at staggered periods during 1937, it should not be difficult for them, based upon their estimate of increases in earnings during 1937, to translate their confidence into percentage increases and say what the increase in per cent should be, in addition to the guaranteed amount in the proposal. This could eliminate the objectionable formula.

The interesting feature about the majority recommendation is this: the suggestion of 1 per cent February 1; 1 per cent August 1; and 1 per cent November 1, respectively, is definite and guaranteed. The gross operating revenues formula is just so much padding for the year 1937. Under the gross earnings formula, and the companies' own estimates, this formula will not give the employees, during the year 1937, anything in addition to the three per cent at various periods, except an additional one-half of one per cent from May 1 to August 1. This is based upon the estimate of the railway authorities that the expectation for 1937 was for an increase in gross operating revenues of from 8 to 10 per cent; and I am taking the ten per cent figure. This being the case, then what is the use of trying to force upon the employees a formula which is objectionable and practically doesn't mean a thing to them during 1937.

According to the railway companies, the combined operating revenues of the Canadian National (Lines in Canada) and Canadian Pacific Railways in 1936 amounted to 292 million dollars. The average for the years 1926 and 1927 was nearly 442 million dollars. The difference between these two levels is $150,000,000. This sum divided by ten—10 per cent—equals 15 million dollars. The final position for application of this base is set out as follows. The combined operating revenues of the Canadian National (Lines in Canada) and Canadian Pacific Railway, for the year 1935, were 273·6 million dollars. Under this modification the deduction would be completely removed when combined operating revenues reached a level of 150 million dollars in excess of 273·6 million dollars, or 423·6 million. Provision is made for one-half of one per cent increase based on an increase of $7,500,000 in revenues at specified periods.

The estimate of the railways for 1937 is an expectation of from 8 to 10 per cent increase in gross operating revenues. So, under the formula proposal here is the situation:

Application of Majority Recommendation

Reduction from present 10 per cent deduction is based on the restoration of one-tenth of the deduction for each $15,000,000 increase in operating revenues for 12 months ending any

quarter year of 1937 over operating revenues for the year 1935.

Operating revenues Canadian National (Lines in Canada) and Canadian Pacific Railways in 1935 were 273·6 million dollars.

If operating revenues in 1937 increase by 10 per cent over 1936 as indicated above, then deduction would become:—

9 per cent effective February 1, 1937
8½ per cent effective May 1, 1937
8 per cent effective August 1, 1937
7½ per cent effective November 1, 1937
7 per cent effective February 1, 1938.

It is plain, from the above, that the 1 per cent February 1; 1 per cent August 1; and 1 per cent November 1, being guaranteed, the only possible benefit to the employees from the formula of gross operating earnings is an additional one-half of one per cent from May 1 to August 1; and that is including the period of 1937 on to February 1, 1938. This return is based on operating revenues reaching 321·2 million dollars on December 31, 1937.

Inasmuch as it takes gross operating revenues of 423·6 million dollars before the 10 per cent deduction in pay cheques is wiped out, it should make an interesting calculation of the number of years required to accomplish this. It is not difficult to understand the strong objection of the employees to this formula.

All the discussions regarding a settlement seem to have centered around the current year of 1937. It is estimated that if the 10 per cent deduction were restored, effective January 1st and was in effect until December 31st, 1937—the fiscal year of the railways—it would amount to roughly $18,000,000 on the annual pay roll for all employees. Each 1 per cent, if effective January 1 to December 1, 1937, would mean an additional $1,800,000 to the annual pay roll.

My colleagues suggest in the majority award, that the return of 1 per cent February 1; 1 per cent August 1 and 1 per cent November 1, is an assured reduction of 30 per cent in the deduction by November 1, and they hope an agreement will be made on the basis recommended for the "current year."

It is quite true that three per cent is 30 per cent of 10 per cent; but it relates to when it is applied. To restore 10 per cent for 1937—all parties agree—would cost roughly $18,000,000. To restore 30 per cent of the 10 per cent for 1937, effective January 1 to December 31, would amount to $5,400,000; but to restore 1 per cent on February 1; 1 per cent on August 1; and 1 per cent on November 1, does not amount to anything like a 30 per cent restoration of the 10 per cent deduction during 1937. Figuring the position, it means that for 1937, the first 1 per cent would be in effect for eleven months, the second for five months, and the third 1 per cent for two months. So that the actual return in cash to the employees for 1937, including the one-half of one per cent on May 1 coming from the formula on gross earnings, would be, according to railway figures, roughly $3,000,000. That is a long way from the $5,400,000 required to restore thirty per cent of the deduction in 1937.

The railway companies show the operating revenues, Canadian National (Lines in Canada) and Canadian Pacific "running total for the preceding twelve months" were $273,558,000; for December 1935 and for December 1936 the estimate is $292,000,000 approximately. A bigger increase in operating revenues is expected in 1937 over 1936, than the increase in 1936 over 1935; and there is every indication of an excellent improvement in 1937, judged by the steady and healthy increase in car loadings up to the middle of January 1937, and the accelerated upward swing in general business.

One of the difficulties in the situation is that the Board of Conciliation has to recommend a wage for the period of 1937, and the reports from which the parties obtained a great deal of evidence are up to 1935 and part of 1936. While 1936 is now passed, the annual reports of the railway companies will not be out until March of this year. However, the railway companies state their net position at the end of 1936 is not improved over 1935. The net position includes a great many considerations for all parties in a controversy like this one

General Conclusions

After it was found that the parties involved had reached the place where negotiations were suspended, the Board continued to explore the situation to see if an arrangement could be found that might bring about a settlement, but in vain. The gross earnings formula alone has prevented any possibility of a voluntary settlement, without considering the distance apart of the parties, on a direct restoration of the 10 per cent by percentage stages.

My colleagues, after examining the formula based on increases in gross operating revenues, state in their report: "The measuring-stick the railways suggested has in its amended form been made more favourable to the factor of wages and we cannot regard it as unfair as a temporary guide." This "amended form" was in conjunction with the favourable attitude of the railways to guarantee 1 per cent February 1; 1 per cent August 1; and 1 per cent November 1, 1937. The majority award in its recommendation proposes 1 per cent February 1;

1 per cent August 1, and 1 per cent November 1, and adopts the "amended form" as a measuring stick for any additional restoration of the deduction in pay cheques.

With the award and recommendations I disagree.

The deductions in pay cheques commenced in 1931. During the last five years the deductions from pay cheques amounted to more than $91,000,000. The ten per cent deduction now in force was the result of an agreement made on November 3, 1934. and effective May 1, 1935, subject to thirty days' notice after July 1, 1935. This notice was given on March 31, 1936. Since then negotiations, conferences, and investigation by the Board have brought the matter to the present time. Since April, 1935, basic rates of wages in the United States have been restored to the employees of the railways there, and also to the employees of Canadian railways operating in the United States and to employees of United States railways operating in Canada. As already pointed out, a great deal of the evidence as to financial condition of the railways is of 1935 and in any case the 1936 situation shows a healthy improvement in gross operating revenues compared with 1935. The car loadings to date show a healthy and steady improvement. Business, according to railway authorities, is showing remarkable improvement. General business improvements in Canada are indicated in all directions by government reports and private business reports. The employees, in addition to a cash deduction from pay cheques, have had deductions in their earnings due to short time, demotions and reduced mileage conditions. It is important to notice that the recommendations in both the majority and the minority reports have to do with wages to be paid, not in 1935 or 1936, but in 1937, and surely these are related to the conditions in 1937 rather than any other conditions. If it was argued that the wages ought to be retroactive to the time the notice was given in March, 1936, it might be a different matter. That is not involved. The question is, what is to be done regarding the wages in 1937 or as the majority report puts it, during the "current year."

Taking into consideration all the evidence, including the argument of the railway companies regarding the financial situation of the railways during the depression, the history of the basic wage structure from the time it was first agreed upon, and the comparative wages of today based upon changing money values; viewing the financial situation of the railways as presented and their current condition and the difficulties which they have encountered and overcome, due to the co-operation of management and employees, and realizing that the railways have ambitious programs for 1937 regarding capital expenditures, it does seem to me, that what the railway companies declare is a temporary arrangement for deductions from pay cheques, should be drawing to a close in justice to the employees. The railway companies have agreed from the first of the deductions that the conditions were to be only temporary and quite frankly state that the restoration of the deductions in full is only a question of time. It is the question of time which really keeps the parties apart from an agreement. One thing is certain, it would be a grave injustice to the employees, if what they entered into as a temporary agreement should develop into a more or less permanent arrangement.

One point the employees stressed all through the proceedings was that they believed that the 10 per cent deduction should be restored during the current year of 1937. Taking everything into consideration, it seems to be fair and that the employees are on fair and reasonable ground when they maintain that position. The railway companies argued that ability to pay should not be a determining factor when a fair and reasonable wage is to be considered. The question here is shall what was considered to be a fair and reasonable wage by both parties prior to December 1, 1931, be restored. And the employees ask that it be restored during the current year.

Recommendations

In view of all the facts and circumstances submitted to the Board and according to the merits and substantial justice of the case, I recommend: that the 10 per cent deduction in pay cheques of the Employees of the Railways be eliminated during the current year 1937 in the following manner:

Four per cent on February 1, 1937.
Two per cent on May 1, 1937.
Two per cent on August 1, 1937.
Two per cent on November 1, 1937.

I would like to make an alternative suggestion. Should it be necessary for the parties to resume negotiations after the awards are made, it would be a good thing if the parties could agree upon a restoration of 4 per cent February 1st, and then on June 1st enter into negotiations to see when the other stages of the elimination of the deductions from pay cheques should occur during 1937, commencing with May 1st as to amount and the dates effective. It should not be beyond the ability of the representa-

tives of the Railways and the representatives of the Employees to reach a settlement of this matter in a business-like spirit in the interests of themselves and the Dominion of Canada as a whole. Anyway on June 1st the conditions to be surveyed would be nearer realities than approximate estimates, as they are now.

Respectfully submitted,

(Signed) FRED BANCROFT.

February 1, 1937.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1.

Summary of Recent Decisions.

REPORTS have been received of two cases recently settled by the Canadian Railway Board of Adjustment No. 1. Earlier decisions were outlined in the LABOUR GAZETTE, August, 1936, page 696 and in previous issues; and the sixth report of the proceedings of the Board, covering the period from October 1, 1933, to September 30, 1936, is being issued as a supplement to this issue of the LABOUR GAZETTE.

The Board was established under a voluntary agreement concluded in 1918, between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. It has power to determine all differences arising between the railway companies and the members of any of the six railway brotherhoods, "including the interpretation of wage schedules or agreements having due regard to the rights of the several classes of employees and of the railways respectively."

The Board consists of six representatives of the railway companies and six representatives of labour one for each of the following Railway Brotherhoods; The Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Railroad Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Case No. 455.—Canadian Pacific Railway (Western Lines) and the Brotherhood of Railroad Trainmen.

This case concerned a difference of opinion existing between the officers of the Canadian Pacific Railway Company (Western Lines) and the Brotherhood of Railroad Trainmen regarding the application of Article 3, Clause F, Road Schedule.

On July 9, 1935, through freight crew, a conductor was called in turn at Minedosa for 3.45K, and ran to Binscarth, 76 miles west, with six stone cars and some other work equipment. After arrival at the latter point, the stone was unloaded between there and Harrowby, 13 miles west. After completion of the work the crew was returned from Harrowby to Minedosa, handling revenue loads and arrived there at 19.50K.

The crew was paid actual mileage Minnedosa to Binscarth, 76 miles, plus initial switching Minnedosa from 3.45K. to 4.20K, 35 minutes or 7 miles; plus time in work train service 7.10 K to 12.30K, 5 hours, 20 minutes, or 67 miles; at Harrowby the turn-around point, from 12.30K to 14.40K, 2 hours, 10 minutes, or 27 miles; plus actual mileages Harrowby to Minnedosa, 89 miles; plus 15 minutes or 3 miles putting train away—total mileage for the round trip including work train service, 269 miles.

The employees' contention was that Article 3, Clause F, Trainmen's Schedule, provided that not less than a minimum day would be allowed unassigned crew used in work train service for two calendar days or less; and as Article 5, Clause A, Trainmen's Schedule, provides that in all freight service a minimum of one hundred miles or less, 8 hours or less, would constitute a day's work exclusive of switching; therefore the representatives of the employees also considered that in the above mentioned case the minimum day should be allowed in through freight service in addition to time claimed in work train service.

The company submitted that the crew was paid in accordance with Schedule provisions for the service performed.

According to the general statement, representatives of the employees and of the railways appeared before the Board on June 9, 1936, and submitted orally additional evidence in support of their respective contentions. At that time the Board decided that its decision in the case should be deferred until further information should be obtained regarding the practice under the rule throughout the territory covered by the schedule agreement, and the parties were requested to make a joint check and report in the matter.

Representatives of the parties again appeared before the Board for a further discussion of the case. It was reported to the Board that it had not been found possible by the representatives of the employees and

of the railways to agree upon a joint report as to what the general practice had been under the rule as affecting the question at issue. It was made evident, however, that the practice under the rule had not been uniform. The arguments of the parties were reiterated and enlarged upon in considerable detail.

The statement concluded that "in view of the varying practices which have prevailed under the schedule condition in question it becomes necessary for the Board to reach a decision based upon the language of the rule itself. Article 3, Clause F of the agreement referred to provides that when an unassigned crew is used in work service for two calendar days or less, the crew will be paid through freight rates and under through freight conditions. It must be admitted that such conditions might incidentally involve the handling of revenue freight during the course of service extending up to two days. The ruling printed in the schedule at the end of Article 3 clearly indicates that if an unassigned crew is used in work service for traffic either going to or returning from its work service, it would be entitled to a minimum of one hundred miles for handling revenue freight in either direction in addition to the compensation to which it would be entitled under the rule for the work service performed as apart from the service rendered in handling the revenue freight."

Under these circumstances the claim for the employees was not sustained.

Case No. 456.—The Canadian National Railways (Central Region) and the Order of Railroad Telegraphers.

This dispute concerned a claim made by an operator for lost time while travelling from Oka Junction to Garneau.

According to the joint statement, the inauguration of the summer passenger train service on the Oka Branch of the Railway necessitated the establishment of a temporary position of Operator at Oka Junction from June 24, 1935, to September 7, 1935, inclusive. The position was bulletined as provided in Article 2, Rule (*m*) of the Telegraphers' Schedule, and was bid in by the operator concerned in this dispute. The position was abolished when the summer passenger train service was discontinued, and the operator elected to go on the spare board, displacing a junior spare telegrapher, who was relieving the regular operator at Garneau. The Operator's assigned hours at Oka Junction were from 1 p.m. to 10 p.m. The assigned hours of the position at Garneau were from 12.01 a.m. to 8 a.m. There was no train from Oka Junction to Garneau between 10 p.m. Saturday, September 7, 1935, the time the operator was released at Oka Junction, and Monday, September 9, consequently he was unable to reach Garneau until Monday afternoon. He commenced work at Garneau at 12.01 a.m. Tuesday, September 10, 1935.

Claim is made for one day's pay for Monday, September 9, 1935, on which day the operator travelled from Oka Junction to Garneau.

In support of their contention the employees referred to Clause "A," Article No. 12, of the Telegraphers' Schedule Agreement which provides:

"Telegraphers transferring by order of the proper officials or in the exercise of their seniority rights will suffer no loss of schedule wages while in transit and in making transfer (rate of pay to be based on rate of position to which he is transferring, provided, however, that pay for time in transit will not be in excess of time actually required by existing train service). This clause does not apply to telegraphers transferring from one promotion district to another."

The employees further contended that the operator was transferring from Oka Junction to Garneau "in the exercise of his seniority rights" and by the authority of the proper official. The time required to travel from Oka Junction to Garneau was "not in excess of time actually required by existing train service" and he was not "transferring from one promotion district to another," so therefore he should be paid for the time actually lost on account of not being able to get from Oka Junction to Garneau as there was no train.

The Railways also quoted Article 12, Rule A, but added in conjunction Rule C as follows:

"(*c*) When Spare Operators are used for a series of reliefs in continuous service, and without any loss of time between relieving at one point and then relieving at another, there will not be any lost time on account of travelling from one relief point to another, but such employees shall not be paid for travelling to the first relief nor from the last relief."

When the position of Operator at Oka Junction was abolished the operator reverted to the spare board in the contention of the Railways, and became a spare operator. The provisions of Article 12, Rule (*c*) apply in this case, and as the Operator travelled from Oka Junction to Garneau to his first relief as spare operator he was not entitled to compensation therefor, and the Railway should not be penalized in the exercise of seniority by spare operators.

Parties to the dispute appeared before the Board and presented oral evidence in support of their respective contentions. Claim of the employees was not sustained.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1937

The following table shows the number of disputes, workers involved, and time loss for January, 1937, as compared with the previous month and the same month a year ago.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Jan. 1937.....	15	6,009	67,082
*Dec. 1936.....	20	3,137	15,917
*Jan. 1936.....	4	205	1,105

*Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration and disputes involving less than six employees, are not included in the published record unless ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes".

The records include all strikes and lockouts which come to the knowledge of the Department, and the methods taken to secure information preclude the probability of omissions of disputes of importance. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

The considerable increase in time loss for January as compared with December was due chiefly to a strike of cotton factory workers at Welland, Ont., and a strike of loggers in the Fort Frances district of northern Ontario, there being also an important strike of asbestos miners, etc., at Asbestos, P.Q. Over one-half of the time loss in December was due to four strikes of cotton factory workers in Ontario and Quebec but none of them were of prolonged duration. In January, 1936, none of the four disputes in existence involved large numbers of employees or caused much time loss.

Four disputes, involving 1,367 workers, were carried over from December and eleven disputes commenced during January. Of these fifteen disputes, eight terminated during the month, four resulting in favour of the workers involved, one in favour of the employer concerned while compromise settlements were reached in three cases. At the end of January, therefore, there were on record seven disputes recorded as strikes or lockouts, namely: meat packing workers, Vancouver, B.C., fur factory workers, Winnipeg, Man., shoe factory workers, Toronto, Ont., women's clothing factory workers, Montreal, P.Q., cotton factory workers, Welland, Ont., foundry workers, Brantford, Ont., and longshoremen, Vancouver, B.C.

The record does not include minor disputes such as are defined in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Information is available as to four such disputes, namely: motion picture projectionists, Toronto, Ont., July 11, 1932, two employers; moulders, Peterborough, Ont., February 27, 1934, one employer; glassworkers at Hamilton and Wallaceburg, Ont., and Redcliff, Alta., August 19, 1936, one employer; and coal miners, River Hebert, N.S., Oct. 23, 1936, one employer.

Disputes involving men on unemployment relief work, who are not paid wages but receive subsistence or allowances for which work is performed or may be required, are not included in the record, no relation of employer and employee being involved.

In Toronto, Ont., during January, picketing of certain establishments by unions has been reported although strikes or lockouts had not occurred. The employers had refused to recognize the unions. This affected a dairy, a painting and a house wrecking job.

A dispute involving fifty employees in two coal mines near Camrose, Alta., about the end of January has been reported in the press but particulars have not been received. It was stated that work was resumed on February 4, an increase in contract rates having been secured.

The following paragraphs give particulars regarding certain disputes in addition to the information given in the tabular statement.

MEAT PACKING WORKERS, VANCOUVER, B.C.—At the end of January the strike of a number of employees in one meat packing establishment had not been settled. The strike commenced on December 29 against the dismissal of eighteen employees, alleged by the employees to be for union activity but stated by the employer to be owing to inefficiency and seasonal reduction in staff. Mediation by the provincial Deputy Minister of Labour and the western representative of the Department of Labour not having resulted in a settlement, the provincial Minister of Labour arranged a meeting of the representatives of both parties with the officials on January 19. The management refused to reinstate the men dismissed or to recognize the Meat Cutters and Packing House Employees' Federal Union, No. 95, affiliated with the Trades and Labour Congress of Canada. Toward the end of the month proposals were made for the reference of the dispute to a Board under the Industrial Dis-

putes Investigation Act or to an investigation under the Public Inquiries Act of British Columbia.

Fur Workers, Winnipeg, Man.—The Commission appointed by the Manitoba Government to investigate this dispute resumed the inquiry on January 4, after an adjournment from December 19.

Cotton Factory Workers, Welland, Ont.—Early in January a committee of the employees met the management and were informed that the twenty per cent increase in wages demanded was impossible and the six per cent increase given before the strike was all that could be paid but that working conditions would be improved and that wages would be further increased later on if business improved. These terms were refused by the strikers. The City Council requested the intervention of the Ontario Department of Labour. A settlement not having been reached, the member of Parliament for Welland and the United Textile Workers of America requested the mediation of the Federal Department of Labour. The Chief Conciliation Officer of the Department reached Welland on Janury 16 and with a representative of the provincial Department of Labour conferred with the parties to the dispute. The management made proposals for a settlement to be put before the strikers. These were that all employees would be re-engaged without discrimination and that the wage rates of the lower paid employees would be adjusted and that the wage scale would be raised when business improved. On January 22 these proposals were voted on by the employees in a secret ballot conducted by the civic authorities, being rejected by a vote of 653 to 130 with six spoiled ballots. On January 23 a telegram was received in the Department from the Acting Mayor of Welland requesting the establishment of a Board of Conciliation and Investigation, and on January 27 a formal application for a Board was received from the employees. A Board could be established in this industry only with the concurrence of both parties to the dispute. The employing company refused its consent but stated it was willing to co-operate in conciliation measures. The dispute, therefore, was unterminated at the end of the month but it is reported that a settlement was reached about February 9, substantially on the basis of the proposals of the company as voted on and rejected on January 22.

Loggers, Flanders, Ont.—Employees in the camps of two lumber companies ceased work on January 7, 1937, demanding increases in wages, reduced hours and recognition of the Lumber and Sawmill Workers' local of the United Brotherhood of Carpenters and Joiners of America. The rate for monthly bushmen was $31.00 with board and the strikers demanded $37.50, with corresponding increases for other classes. A wage scale under the Industrial Standards Act of Ontario had been in effect from March 24 to September 30, 1936, but had not been renewed. As a result of conciliation by representatives of the provincial Department of Labour the employers agreed to raise the wages and to give a bonus to all men who worked the whole season but refused to reduce the hours from ten per day to eight or to recognize the union. It was, however, stipulated that there would be no discrimination against union members and work was resumed on January 22.

Coal Miners, Florence, N.S.—Miners in one colliery ceased work on January 13 when the management put on eighteen men instead of sixteen for certain work in longwall mining, thus reducing earnings. The strikers claimed that under the agreement in force no changes in conditions were to be made unless mutually agreed upon. On January 15 the management agreed to reconsider the matter, work to be resumed on the next regular day.

Asbestos Miners and Mill Workers, Asbestos, P.Q.—Employees in one establishment ceased work on January 23, demanding increases in wages and an agreement with the National Catholic Union. At a conference on January 5 an increase in wages had been discussed but owing to a delay in making a higher scale effective the men ceased work. As a result of conferences attended by provincial and municipal officials the management agreed to enter into an agreement with the union and to make an increase in the minimum rate from 25 cents per hour to 33½ cents with increases for other classes. Work was resumed on January 30.

Shoe Factory Workers, Toronto.—Employees in one establishment ceased work on January 14 demanding that new lasting machines should be operated by experienced lasters instead of by new employees. The employer offered to guarantee that the employees would not lose any work and proposed that the dispute should be settled by reference to the provincial Department of Labour as provided in the agreement but this was refused. The provincial Deputy Minister of Labour was informed of this and took the matter up with the union, the Canadian Shoe Workers' Union and Allied Crafts, but arbitration was refused. The dispute was, therefore, unterminated at the end of the month.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1937*

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in progress prior to January, 1937			
MANUFACTURING—			
Animal Foods—			
Meat packing workers, Vancouver, B.C.	202	4,000	Commenced Dec. 29, 1936; against discharge of employees, claimed to be for union activity; unterminated.
Fur, Leather, etc.—			
Fur factory workers, Winnipeg, Man.	100	2,000	Commenced Aug. 11, 1936; for union agreement, increased wages and 40-hour week; unterminated.
Textiles, Clothing, etc.—			
Cotton factory workers, Welland, Ont.	865	20,000	Commenced Dec. 22, 1936; for increased wages; unterminated.
TRANSPORTATION—			
Water—			
Longshoremen, Vancouver, Victoria, etc., B.C.	200	1,000	Commenced Nov. 23, 1936; sympathy with strike of longshoremen in U.S.A. and for recognition of union; unterminated.
(b) Strikes and Lockouts commencing during January, 1937			
LOGGING—			
Loggers, Flanders, Ont.	2,300	30,000	Commenced Jan. 7, 1937; for increased wages, reduced hours and recognition of union; terminated Jan. 22, 1937; compromise.
MINING, ETC.—			
Coal miners, Florence, N.S.	680	1,360	Commenced Jan. 13, 1937; against change in working conditions alleged to lower earnings; terminated Jan. 14, 1937; in favour of workers.
Asbestos miners, etc., Asbestos, P.Q.	1,150	6,900	Commenced Jan. 23, 1937; for increased wages; terminated Jan. 29, 1937; in favour of workers.
MANUFACTURING—			
Boots and Shoes—			
Shoe factory workers, Toronto, Ont.	61	900	Commenced Jan. 14, 1937; *re* employment on new machines; unterminated.
Textiles, Clothing, etc.—			
Cotton factory workers, St. Gregoire de Montmorency, P.Q.	25	25	Commenced Jan. 4, 1937; for increase in wages; terminated Jan. 5, 1937; in favour of employer.
Silk knitting factory workers (dyers), Toronto, Ont.	12	60	Commenced Jan. 13, 1937; against discharge of worker and for reduced hours; terminated Jan. 18, 1937; compromise.
Men's clothing factory workers (coats and suits), Montreal, P.Q.	175	400	Commenced Jan. 18, 1937; against dismissal of workers in violation of agreement; terminated Jan. 20, 1937; in favour of workers.
Women's clothing factory workers (dressmakers), Montreal, P.Q.	38	76	Commenced Jan. 29, 1937; against dismissal of workers, alleged to be for union activity; unterminated.
Metal Products—			
Foundry workers, Brantford, Ont.	100	100	Alleged lockout; commenced Jan. 30, 1937; *re* recognition of union; unterminated.
Metal workers (enamel signs, etc.), Cowansville, P.Q.	88	176	Commenced Jan. 19, 1937; for increased wages; terminated Jan. 20, 1937; in favour of workers.
CONSTRUCTION—			
Other—			
Labourers (waterworks), Bolton, Ont.	13	85	Commenced Jan. 12, 1937; for increased wage rates; terminated Jan. 19, 1937; compromise.

*In this table the date of commencement is that on which time loss first occurred and the date of termination is the last day on which time was lost to an appreciable extent.

Cotton Factory Workers, St. Gregoire de Montmorency, P.Q.—Doffers on the night shift in one establishment ceased work on January 4 claiming that the increases in wages agreed upon in the settlement of a strike from December 21 to December 26, 1936, had not been given to all. The management explained that owing to the variety of machines wages could not be uniform and the increases had averaged what had been agreed upon. The day shift worked and the night shift resumed work on their next shift, some of them being refused employment and replaced.

Silk Knitting Factory Workers (Dyers), Toronto.—Employees in one establishment ceased work on January 13 when a dyer was discharged. The strikers also demanded wage increases and complained of excessive overtime. The employer undertook to have no work in excess of ten hours per day so far as practicable and work was resumed on January 19. The discharged worker was not reinstated.

Men's Clothing Factory Workers (Coats and Suits), Montreal.—A number of employees in one establishment ceased work on January 18, and others on January 19, against the dismissal of three workers and the refusal of the employer to arbitrate the dispute as required by a verbal agreement with the Amalgamated Clothing Workers of America. Work was resumed on January 21, arbitration having been agreed to. The dismissed men were reinstated in accordance with the decision of the arbitrator.

Dress Factory Workers, Montreal.—Employees in one establishment ceased work on January 29, against the dismissal of seven workers on joining the International Ladies' Garment Workers' Union. Negotiations between representatives of the employer and the union resulted in the reinstatement of the discharged employees and work was resumed on February 4.

Foundry Workers, Brantford.—Employees in one establishment were involved in a dispute from January 30, the demand of the International Moulders' Union of North America for recognition having been refused. It is not clear whether the closed union shop was demanded. The employer proposed that employees should elect a shop committee and a sub-committee for each department and, this being refused, the plant was shut down pending reorganization. At the end of the month a settlement had not been reached but on February 8 work was resumed and recognition of the union was reported to have been conceded.

Metal Workers (Enamel Signs, etc.), Cowansville, P.Q.—Employees in one establishment ceased work on January 19, their demand for an increase in wages having been refused. Work was resumed in the afternoon of the next day when through representatives of the provincial Department of Labour the dispute was referred to arbitration under the Quebec Trade Disputes Act. The minimum rate of wages was increased from 15 cents per hour to 20 cents and other classes also secured increases.

Labourers (Waterworks Construction), Bolton, Ont.—Employees of a contractor ceased work on January 12 demanding an increase in wages from 25 cents per hour to 35 cents. Through the mediation of the village council a rate of 30 cents was agreed upon and work was resumed on January 20.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

The latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the issue of February, 1936, in the review of Strikes and Lockouts in Canada and Other Countries, 1935. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Statistics given in the annual review and in this monthly article are taken as far as possible directly from the government publications of the various countries concerned, while information as to particular disputes is obtained for the most part from newspaper reports.

Great Britain

Preliminary figures for the year 1936 show 808 disputes beginning in the year, which involved, directly and indirectly, 315,000 workers, with a time loss of 1,830,000 working days for the year.

Of the 808 disputes beginning in the year, 160 were over demands for advances in wages, 33 over proposed wage reductions, 170 over other

wage questions, 23 over questions relating to working hours, 219 over questions respecting the employment of particular classes or persons, 99 over other questions as to working arrangements and 82 over questions of trade union principle. Twenty stoppages were due to sympathetic action and two were due to other causes.

The number of disputes beginning in December was 49, and 27 were still in effect from the previous month, making a total of 76 disputes in effect during the month, involving 29,300 workers with a time loss of 195,000 working days for the month.

Of the 49 disputes beginning in December, 10 were over demands for advances in wages, 13 over other wage questions, 16 over questions respecting the employment of particular classes or persons, 6 over other questions of working arrangements and 3 over questions of trade union principle. One dispute was due to sympathetic action. Settlements were reached in 57 disputes, of which 13 were settled in favour of workers, 24 in favour of employers, 20 resulted in a compromise; in 5 other disputes work was resumed pending negotiations.

The 2,800 coal miners near Doncaster who went on strike November 9, over a dispute as to minimum wages for certain workers, were joined by an additional 6,000 miners in the same locality on December 28 who went out in sympathy with them. No settlement had been reported at the end of the year.

United States

The number of disputes beginning in October was 185 and 135 were still in progress from the previous month, making a total of 320 disputes in progress during the month, involving 135,000 workers with a time loss of 1,007,000 working days for the month.

The sit-down strike of employees of the General Motors Corporation which was reported in the last issue of the LABOUR GAZETTE, continued during January. Officials of the federal government and the governor of Michigan were negotiating for a settlement early in February and on February 11, the dispute was terminated. The agreement reached provides for recognition of the United Automobile Workers' Union as the bargaining agency for its own members, with no discrimination against employees on account of union membership. For the next six months, however, the Corporation agreed that in those plants which had been on strike, they would bargain only with the union unless permission to bargain with other representatives of employees is given by the Governor of Michigan. The Corporation and the union are to bargain collectively as to wages and working conditions, beginning February 16. An immediate increase in wages of 5 cents per hour was announced by the Corporation.

The strike of seamen and other marine workers on the eastern and Gulf coasts terminated January 25 when the strike was called off.

The strike of longshoremen, seamen and other marine workers in Pacific Coast ports, which began October 30, was reported in the last three issues of the LABOUR GAZETTE. About 40,000 workers were involved and shipping on this coast had been practically at a standstill during this period. Settlements were reached and ratified February 5, by which all involved except longshoremen received wage increases. Longshoremen secured their demand for union control of hiring halls, with a continuance of the six hour day. Union control of hiring was also conceded to other unions with the exception of the Masters, Mates and Pilots and Engineers, who however secured union recognition.

"The Employed Woman Homemaker in the United States" is the title of a bulletin (No. 148) published recently by the Women's Bureau of the United States Department of Labor. This report is the result of information obtained by the Bureau of the Census in 1930, which indicates how many women in the United States are both homemakers and wage earners, and certain other facts concerning women who are under the necessity of carrying double responsibilities. The report presents an analysis of these data for the United States as a whole. It shows in what occupations employed homemakers are engaged, their ages, nativity, the extent to which they are city dwellers, the sizes of their families and the number of young children, the extent to which they are taking in lodgers, the number who are the sole family wage earners, and the number whose families are headed by an employed woman.

In a report entitled "The Coke and Gas Industry in Canada, 1935," issued by the Dominion Bureau of Statistics, it is shown that the value of coke, gas and by-products made in coke and gas plants during 1935 was $38,474,789, compared with $38,272,020 in 1934 and $29,936,975 in 1933. Capital employed in the industry in 1935 was $98,939,160. The average number of workers was 4,107, who received salaries and wages amounting to $5,627,861. The cost of materials for use in manufacturing was $15,233,519.

NATIONAL RELIEF REGISTRATION

Statistics of Relief Recipients Issued By National Employment Commission

Drought in Western Canada more than accounted for the increase in direct relief rolls, according to preliminary registration figures of the National Employment Commission issued on January 28*.

Following the first exhaustive detailed national registration of persons on relief, the Commission cited increased prairie province totals as constituting the main reason for a net advance of approximately 68,700 in the grand total of direct relief recipients last September as compared with the same month a year ago. An increase of 92,881 persons in Saskatchewan alone, as compared with September, 1935, was recorded. Alberta showed a substantial increase, 9,795, this too being traceable to the crop reverse.

Eight provinces of Canada, had a direct relief roll of 960,634 persons in September according to the preliminary figures. This compares with 891,921 persons in September 1935, 924,430 in September, 1934, and 953,277 in September 1933, in the eight provinces included. New Brunswick, where direct relief is paid entirely by the municipalities, is not covered in any comparative figures.

As this is the first time such a detailed national compilation and interpretation of cases on relief has been made, there is no strictly comparable basis with which to measure the analysis, it was stated. Subsequent registrations being continued monthly will afford such for the future. Previously, relief statistics were provided monthly in classified totals by the provincial authorities and compiled by the Dominion Relief Commissioner, these being published annually in his report to the Minister of Labour.

The grand total of 960,634 persons on direct relief in the eight provinces is the aggregate number of individuals of whatever domestic status, including dependents of all ages, to whom direct relief was paid by the 1,553 Local Relief Authorities at some time or other during September. Of the grand total 709,281 were in receipt of urban relief, and 251,353 of farm relief. Totals in Central Canada, with relief figures affected in large measure by industrial conditions, are interesting. Apparently reflecting a revival in industry, Ontario showed a decrease from September 1935 of 56,080, Quebec, on the other hand, recorded an increase of 29,386. The net decrease as affecting these two provinces was 26,694. Manitoba showed only a slight increase on its gross figure, while Nova Scotia and British Columbia recorded lesser totals than a year before. Comparison between farm and urban relief in September 1935 and 1936 cannot be made as figures for earlier years are not comparable in detail to those secured through the registration. Of the total last September 26·2 per cent were farm and 73·8 urban relief.

Tendency of the unemployed to drift to larger cities is revealed by the registration. Of the burden of urban relief last September, 47·6 per cent was concentrated in cities of over 25,000. The smaller cities, with populations from 10,000 to 25,000 accounted for 3·3 per cent. In towns of 1,000 to 10,000, the percentage was 11·3. In communities under 1,000 it was 8·6. These figures accounted for the 73·8 per cent on urban relief. The remaining 25 per cent of rural relief is accounted for very largely by the close to 100,000 cases in the prairie province drought areas.

A percentage analysis of direct relief recipients by provinces showing their provincial location in September, 1936, with the provincial percentage of the population of the eight provinces, is as follows:

Province	Per cent of Direct Relief Recipients	Per cent of Population 8 provinces (1931)
	% of Total	
Prince Edward Island	0·10	·88
Nova Scotia	1·39	5·15
New Brunswick (Province not paying direct relief)	.....	.....
Quebec	35·49	28·88
Ontario	28·95	34·48
Manitoba	5·54	7·03
Saskatchewan	16·05	9·26
Alberta	5·69	7·35
British Columbia	6·79	6·97
	100·00	100·00

In the British Columbia *Gazette* issued January 7, 1937, notification was made of the appointment of J. A. Edward Bell of Vancouver, as Chief Administrator Officer and Mrs. F. Eaton, and Hamilton Crisford also of Vancouver as administrative officers under the Trades Schools Regulation Act of British Columbia.

* The figures in this article were further revised on February 8.

LEGISLATIVE REQUESTS OF CANADIAN LABOUR BODIES

LAST month the LABOUR GAZETTE contained a summary of the legislation requested by the Trades and Labour Congress of Canada, the Confederation of Catholic Workers and the All-Canadian Congress of Labour.

Since then the legislative submissions of the British Columbia and Ontario Executives of the Trades and Labour Congress have been received, as well as the memorandum presented to the Dominion Government by the Joint Legislative Committee of the Railway Transportation Brotherhoods.

Summaries of these presentations are given below:

Joint Legislative Committee of the Railway Transportation Brotherhoods

On January 20, 1937, the Railway Transportation Brotherhoods, through their Dominion Joint Legislative Committee, submitted a memorandum of proposed legislation to the Dominion Government. The delegation, received on behalf of the Government by the Hon. C. D. Howe, Minister of Transport; Hon. Ernest Lapointe, Minister of Justice; and the Hon. Norman McL. Rogers, Minister of Labour, was composed of H. B. Chase, Dominion Legislative Representative, Brotherhood of Locomotive Engineers; Wm. L. Best, Vice-President, National Legislative Representative, Brotherhood of Locomotive Firemen and Enginemen; Thomas Todd, Vice-President, Dominion Legislative Representative, Order of Railway Conductors; A. J. Kelley, Dominion Legislative Representative, Brotherhood of Railroad Trainmen; W. H. Phillips, Vice-President, Order of Railway Telegraphers; and W. V. Turnbull, Vice-President, Brotherhood of the Maintenance-of-Way Employees.

British North America Act

The delegation expressed itself as being in accord with the resolution adopted at the Dominion-Provincial Conference, December, 1935, that, in the interest of the Dominion and of the Provinces, amendments to the British North America Act "are now and subsequently may be necessary and imperative." Accordingly the delegation urged the Government's consideration of the following proposed amendments:—

(*a*) To restrict the powers of the Senate to veto any bill passed by the House of Commons more than twice, this proposal being in harmony with the present practice of the Parliament of Great Britain;

(*b*) To broaden the scope or legislative competence of the Federal Parliament empowering it to enact social legislation of general interest and welfare to the people of Canada; and

(*c*) to empower the Federal Parliament to deal effectively with the regulation of highway transport as a work for the general advantage of Canada, provided that Parliament has not already this power.

Regulation of Motor Vehicle Transport

The delegation drew attention to recommendations contained in the memorandum submitted to the Dominion-Provincial Conference in December, 1933, and stated that "it is encouraging to note that a substantial number of them were implemented by conclusions reached at the Dominion-Provincial Conference of December, 1935, when it was resolved to submit the following eleven recommendations which refer only to vehicles used for transportation of passengers and freight for hire which are specifically licensed by Provinces for highway transport, taxi and delivery service vehicles not being included.

(1) That the Minister of Transport arrange to collect information regarding rates prescribed or charged by public carriers of freight and passengers in the various provinces and rates charged by the railway companies and communicate such information to the provinces to the end that a fair and equitable basis may be arrived at for the establishing of uniform rates for highway transportation of passengers and freight.

(2) That the principle that carriers of passengers and freight for hire shall be required to carry insurance covering all risks be endorsed.

(3) That operators of vehicles for the transportation of passengers and freight for hire be required to keep accounts of their operations and to submit returns to the provincial authority in such form and at such intervals as may be required.

(4) That legislation be enacted by the provinces limiting the hours of labour of drivers of vehicles used for the transportation of passengers or freight for hire.

(5) That in the interests of public safety a standard of fitness should be required of all vehicles used in the transportation of passengers or freight for hire.

(6) That in the interests of public safety a standard of physical fitness as evidenced by a certificate of a medical practitioner be required of all drivers of vehicles used in the transportation of passengers or freight for hire.

(7) That a licence should only be granted for the operation of vehicles for the transportation of passengers or freight for hire where it can be proved to the satisfaction of the licensing authorities that the service proposed is a public necessity and convenience.

(8) That every province establish a fair standard of wages to be paid to the drivers of vehicles used in the transportation of passengers or freight for hire.

(9) That with a view of securing a uniform act for all provinces covering the operation of vehicles used in the transportation of passengers and freight for hire the Department of Transport secure the legislation and regulations now in existence dealing with such vehicles and submit this information to the various provinces.

(10) That valuable services can be rendered to every province in Canada if a permanent committee consisting of representatives of the provinces be set up with a secretary established in the Department of Transport, whose office would collect and distribute data relative to legislation and regulations in effect or contemplated in various jurisdictions.

(11) That the principle of securing basic uniformity and comparability in the matter of road transport statistics be endorsed by this conference, and that instructions be issued to the Dominion Bureau of Statistics to proceed with the discussion of a detailed plan with the Provincial authorities to the end of meeting what has become both a provincial and national necessity.

Commending the Minister of Transport for the keen interest shown and the constructive suggestions offered with a view to securing the necessary co-operation from Provincial authorities looking to more effective control of competitive highway transport, the memorandum stated: "If we rightly understand the press reports, one of the important suggestions is similar in principle to our first recommendation to the Federal-Provincial Conference, namely; 'That all buses and trucks operating within Canada be placed under the control, administration and supervision of a transport commission (with like powers of the Board of Railway Commissioners for Canada), requiring operation under conditions similar to those imposed upon the railways, especially with regard to the fixing of rates, tariff charges, accommodation and facilities for passengers and shippers, etc.' If our experience throughout the years in dealing with this important national problem is of any value to the Minister of Transport and to the Government, the benefit of that experience and the assurance of our co-operation are cheerfully placed at your service."

Railway Act Amendments

The memorandum set forth several proposed amendments to the Railway Act. One recommendation was that $500,000 per year should be provided for the elimination of grade crossings instead of the present grant of $200,000. Another suggested amendment was one to provide that two men be required on all locomotive or power propelled units. Further proposed amendments were placed under the following headings. "Compensation for loss of Property, Automatic Application of Slow Order and Riding on Back of Tender."

St. Lawrence Deep Waterways

The delegation, on behalf of the railway employees, reiterated opposition to the expenditure of public funds for the deepening of the St. Lawrence Waterways for transportation purposes. Reasons advanced against this project were practically identical with those advanced in a previous submission. (Labour Gazette, December, 1935, page 1110.)

Canal Tolls

The delegation requested that necessary legislation be enacted to require adequate tolls, to be charged for all commercial transport services through canals. It was also urged that all inland waterways, be placed under the control and supervision of a Transport Commission.

Old-Age Pensions

Amendments to the Old Age Pensions Act were suggested providing (*a*) that at least ninety per cent of the total costs will be paid by the Dominion Government; and (*b*) that the age qualification be reduced to sixty-five years.

Labour Representation on Public Boards and Commissions

The Brotherhoods reaffirmed their previously declared policy in favour of labour representation on all public boards and commissions and expressed appreciation for the extent to which the requests of labour in this respect have been implemented by both Federal and Provincial Governments.

Unemployment and Relief

Prefacing its submissions in regard to unemployment relief measures, the memorandum stated:

"We reaffirm our concurrence with the policy by which municipal and provincial authorities assume responsibility for the initial action necessary to relieve existing human needs within their jurisdiction to the full extent of their financial ability. If they are unable to cope with current demands for relief, we express the hope that your Government will continue the policy of assisting those municipal and provincial authorities by every practical means, including that of furnishing the necessary financial assistance. Those persons who, because of varied circumstances, have been driven away from the path of self-reliance must be fed, clothed and sheltered. To ensure that no citizen shall

want for those necessities is a matter of national concern and the ultimate responsibility of the Dominion Government. The efforts made by your Government during the past year, both in financial assistance and through measures so efficiently administered under the Labour Department are worthy of commendation. To continue a program of necessary public works, no doubt would create additional opportunities for many thousands of willing workers to re-establish some measure of their former economic independence. Any such program should be carried out under supervision which would make impossible the exploitation of those unfortunate persons who are obliged to accept public aid as a mere human existence."

Continuing, the memorandum considered that all such measures could only be regarded as "temporary expedients." It again recommended the establishment of a "national fact-finding body" for the purpose of discovering "the primary causes and related factors responsible for prevailing economic insecurity."

Dealing with the problem of unemployment from technological causes, the memorandum indicated the international character of the problem by quotations from the Report of the Director of the International Labour Office (LABOUR GAZETTE, June, 1936, page 508; and July, 1936, page 620).

Collective Bargaining.—Concluding this section of the memorandum it was considered that "many inequalities might more easily be adjusted if all Canadian workers were privileged, without fear of intimidation, to organize for their common good and their right to do so was adequately protected. Where this right has been successfully contended for by economic strength it has long since passed the experimental stage. Not so with thousands of workers who, for various reasons, have been unable to successfully contend for that right."

In this respect, the brotherhoods stated that they desired "to generously share the view expressed by other responsible representatives of Labour that Canadian workmen are deeply indebted to the Federal Minister of Labour, Honourable Mr. Rogers, for his recent public statement in, so clearly and boldly, asserting the right of the workers to organize in any lawful association they desire for the promotion of their welfare. That statement was most timely and should readily receive the commendation and approval of all right-thinking citizens of this Dominion. Moreover, it is our considered judgment that if the Dominion and Provincial Governments would reaffirm the right of the workers to organize and also implement that affirmation by an assurance of the fullest protection in the exercise of that rights by means of appropriate legislation, an entirely new day would dawn in the right by means of appropriate legislation would enter many homes which have previously been darkened by insecurity and the nightmare of unemployment."

Railway Amalgamation

The delegation recorded its "vigorous opposition not only to the amalgamation of the railways, but also to the indiscriminate pooling of railway services and facilities without due consideration being given to the interests of the employees."

State Health Insurance

Dealing with state health insurance the memorandum advocated the co-operation and assistance of the Federal Government "to the fullest extent possible within its legislative competence, towards formulating and adopting a national health policy."

Legislative Program of the Ontario Executive Committee of the Trades and Labour Congress of Canada

THE legislative program of the Ontario Executive Committee of the Trades and Labour Congress of Canada was presented to the Ontario Government on January 12, 1937, by a large labour delegation, included in which was P. M. Draper, president of the Congress and the executive officers of the provincial committee.

Unemployment and Relief

On the subject of unemployment and relief, it was contended that if private enterprise failed to provide work, "then governments should meet the situation by undertaking all possible public works," and that "direct relief should only be resorted to when no other avenue is available to meet the situation, and for those who are unable to work." It was asked that unemployed women receive the same consideration in relief grants as is accorded to men. In order to encourage the erection of new buildings for the proper housing of the citizens of the province, it was suggested that a fund be made available to muni-

cipalities for the promotion of such work; also that on housing projects, repair jobs and public buildings, etc., provision would be made for observance of a maximum six-hour day and thirty-hour week without reduction in the aggregate earnings of the workers involved. Other recommendations to provide further employment were: The purchase of departmental and other supplies during periods of unemployment; clearing of lands for agricultural purposes and reforestation; and further development of free employment bureaux and assistance rendered in transporting workers to distant jobs and temporary employment. A request was also made for the enactment of legislation which would prohibit those who are in receipt of superannuation sufficient to maintain themselves and their dependents from accepting further employment in competition with other workers.

Right of Organization

In pressing for legislation to give the workers the right to organize, the delegation submitted a draft bill, requesting its enactment. The clauses of the proposed Bill were as follows:—

1. This Act shall be known as The Freedom of Trade Union Association Act.
2. Under this Act, "Trade Union" shall mean any association or organization of employees, whether employed by one employer or by more than one employer, which is formed for the purpose of advancing in a lawful manner the interests of such employees in respect of the terms and conditions of their employment, and which is free from undue influence, domination, restraint or interference by employers or associations of employers.
3. It shall be lawful for employees to form themselves into a trade union.
4. It shall be lawful for employees to bargain collectively with their employer or employers, and to conduct such bargaining through the employees' trade union, and through the duly chosen officers of such union.
5. It shall be unlawful for any employer hereafter to insert any clause in any written contract of employment, or to impose any condition in any verbal contract of employment, or to continue such clause or condition hitherto in effect, where such clause or condition seeks to restrain any employee from exercising his rights under this Act, and any such clause or condition shall ipso facto be null and void and of no effect.
6. Any employer, whether an individual person, a firm or a corporation, which shall seek by intimidation, threat of loss of position or employment, or by actual loss of position or employment or by threatening or imposing any pecuniary penalty, with the object of preventing an employee from belonging to a trade union, shall be liable upon conviction in a court of competent jurisdiction in the case of an individual to a fine not exceeding One Hundred Dollars ($100) for each such offence, or to a term in jail not to exceed thirty (30) days in default of payment of any fine levied, and in the case of a corporation to a fine not exceeding One Thousand Dollars ($1,000); provided that in the case of a corporation, where any fine is imposed but not paid, the responsible officer or officers of said corporation shall be held as personally liable.
7. This Act shall come into effect immediately upon receiving Royal Assent.

Minimum Wages

In regard to minimum wages, the memorandum specifically requested the following amendments to the Act:

(*a*) That no girl's service shall be dispensed with in industry simply because she has become an experienced worker, without the consent of the Minimum Wage Board.

(*b*) That all boys under the age of 19 years be brought within the scope of the Act wherever they are not already covered by trade union agreement or the Apprenticeship Act.

(*c*) That domestic servants be included in the Act.

(*d*) That action be taken to cover girls employed in establishments on the outskirts of centres covered by the Act.

Workmen's Compensation

While commending the Workmen's Compensation Act as being a great benefit to the workers of the province, the memorandum expressed the view that the act required certain amendments and submitted the following:

1. Cases have arisen where injured workmen are compelled to accept fifty per cent of their original allowance, owing to the fact that they have been pronounced as fit for light work which they could not perform or were unable to obtain. The Act should be so amended that the injured workman would be assured of the prescribed amount of 66⅔ per cent of his wages at the time of accident, instead of on previous yearly earnings until he is fit to resume his usual occupation.
2. It should be made compulsory for all institutions and public service bodies to insure their employees under this Act.
3. The provision and maintenance of artificial limbs, apparatus and dental appliances should be extended for such periods as they may be required instead of being limited to one year as at present.
4. The list of industrial diseases should be extended to cover: (*a*) all silica poisoning, including silicosis contracted by all workers under Schedule 1 and railway coach cleaners under Schedule 2 through conditions arising out of their employment; (*b*) frost bite and infection from poison ivy contracted by railway maintenance of way employees and others whose occupation subjects them to these hazards.

Apprenticeship Act

Dealing with apprenticeship, the memorandum, after referring to the amendment to the Act in 1936 eliminating the age limit (LABOUR GAZETTE, May, 1936, page 412) urged that "immediate action be taken to re-establish the provisions regarding the age limit for apprentices."

Injunctions and Labour Disputes.—The memorandum drew attention "to the increasing use by employers of the court injunction as a means of restraining peaceful picketing" and advocated the prohibition of interim injunctions before trials arising out of industrial disputes.

Health Insurance.—One reason advanced for requesting health insurance legislation was that it affords similar protection during periods of illness as is now afforded by workmen's compensation legislation in respect to industrial accidents. It was urged that in the general interest legislation be enacted which will bring within the reach of all citizens of the Province the means whereby health can be maintained at the highest possible level.

Codes.—A request was made for the strict enforcement of penalties for violation of codes coming under the Industrial Standards Act.

Refunding of Licences.—It was suggested that a portion of the revenue from motor vehicle licences and gasoline taxes, amounting to thirty per cent, be refunded to municipalities, based on the number of licensed vehicles within such municipality, in order that they may be assisted in meeting the cost entailed in maintaining suitable roads for motor traffic.

Fair Wage Regulations.—The government was commended for having taken action to give the fair wage regulations the force of law but was asked to amend this legislation to provide for the shorter work day and week. Adequate machinery was sought to ensure the fullest enforcement of this statute.

Motor Transportation.—The attention of the government was drawn to the necessity for more effective control of commercial traffic on our highways and the elimination of unfair competition with the railways.

Under the heading "Hours of Work" the delegation strongly stressed the need for legislative action, which, through the reduction of the work day and work week, will provide more opportunity for employment. As a first step, the government was requested "to institute the six-hour day and five-day week on all public works, at the asme time maintaining wage standards so as to provide an increased volume of purchasing power, same to apply to works undertaken by municipalities, commissions or other authorities in cases where financial aid or guarantee is extended by the government.

In addition to the legislation proposed above amendments to the following Acts were requested: Factory Act; Cinematograph Act; Mothers' Allowance Act; Old Age Pensions Act; Election Act; Liquor Control Act; and the Mechanics Lien Act.

Other subjects dealt with in the memorandum included: Bond printing; power paper cutting machines; electrical installation and protection of electrical workers; regulation of use of poisonous materials; elevator safety codes; milk board; one man street cars; steamfitting and plumbing regulations; fire protection; hoisting machinery; enforcement of blower law; safety at railway crossings; education; public utilities; physical training in schools; witness fees, and bonding of lawyers.

Owing to illness, the Premier, Hon. Mitchell F. Hepburn was unable to be present but the delegation was received by eight of his Cabinet Ministers, viz.: Hon. H. C. Nixon, Provincial Secretary and Acting Premier; Hon. David A. Croll, Minister of Public Welfare, Municipal Affairs and Labour; Hon. Peter Heenan, Minister of Lands and Forests; Hon. Duncan Marshall, Minister of Agriculture; Hon. Arthur W. Roebuck, Attorney General; Hon. Dr. L. J. Simpson, Minister of Education; Hon. Paul Leduc, Minister of Mines and Hon. Dr. J. A. Faulkner, Minister of Public Health. Mr. Jas. F. Marsh, Deputy Minister of Labour was also present.

British Columbia Executive Committee of Trades and Labour Congress.

The British Columbia Executive of the Trades and Labour Congress, representatives of 175 trade unions in all parts of the province recently presented its program of proposed legislation to the Hon. T. D. Patullo, Premier of British Columbia, and members of the Provincial Government.

Unemployment.

The memorandum emphasized that unemployment was still "the immediate and most urgent problem facing the citizens of this province," and it regretted that "no adequate measures have been taken to cope with the situation." It was considered that the public works undertaken "are of a temporary and

limited nature and insufficient to meet our present day unemployment problem." On all public works contracts let by the Provincial Government it was recommended that "the six-hour day and the five-day week be put in force, also that the union scale of wages be paid on all work covered by craftsmen, and on all work not so covered, that a minimum rate of not less than fifty cents per hour be paid," and "that such work shall not be confined to recipients of relief, but open to all those who are seeking employment."

Hours and Wages.

The memorandum stressed "the necessity of establishing and enforcing the six hour day and five-day week in all provincial legislation dealing with the question of hours of labour," in order "to distribute the available employment." It was further recommended that this "be strictly enforced" without any exemptions.

In stating its wage policy, the executive considered that "the necessary reduction in hours of labour for the purpose of spreading employment will entail maintaining and increasing the amount in the pay envelope, otherwise the result will be an increase in the number of employed persons without increasing their purchasing power within the province." The government was commended for its partial restoration of wages to provincial civil servants, and the restoration of the balance was urged as a factor in strengthening the governments' position in recommending similar action to private employers.

Minimum Wage Act.

While recognizing the assistance of the present Minimum Wage Act, it was the opinion of the Executive that its effectiveness would be increased by the introduction of an Act establishing a definite minimum applicable to both male and female employees "below which it would be illegal for one party to employ another in any capacity." The minimum suggested was 50 cents per hour.

Hours of Work Act.

It was recommended that the Hours of Work Act be amended to apply to all in employment and "to prohibit any individual from working for a longer period than that of six hours per day, five days per week or a maximum of thirty hours in any one week without exemptions." Elimination of night work in bakeries was also requested.

Health Insurance.

In regard to health insurance the memorandum stated:

"We appreciate the fact that your Government has taken a step in this direction, as you have introduced at the last session the first Health Insurance Act on this continent, and we are desirous of assisting you to make it a success. It is from this position that we strongly reiterate our recommendations of last year: that you be concerned only with the best interests of the majority of the citizens and refuse to be diverted therefrom by influential minorities. We urge upon you the necessity of all citizens being included in the Act without exceptions with respect to salary or income limitations."

Workmen's Compensation.

The memorandum further recommended that the rate of compensation be increased to seventy-five per cent; that casual workers be included under the Act; that the compensation rate be based on actual wages at the time of accident; and that the Act include all occupational diseases.

British North America Act.

The views of the executive concerning the British North America Act were expressed in the memorandum as follows:

"Your attention is once more drawn to the need of uniform labour and social laws throughout this Dominion. It is impossible to have adequate standards of living in the face of unrestricted inter-provincial competition. The need of uniformity and labour laws must be recognized.

"Further, we request the Provincial Government to co-operate with the Dominion Government in order to bring about the desired changes in the British North America Act, as exemplified by the need of a Dominion Act governing unemployment and other forms of essential social insurance."

Other Recommendations.

Other recommendations of the Provincial Executive Committee were:

Increasing the facilities for education;

Compulsory liability insurance for all automobile owners;

Enactment of legislation prohibiting the operation of one man street cars;

Enactment of legislation for the protection of trade union members "from discrimination and intimidation from employers."

Legislation restricting the use of injunctions in industrial disputes.

32077—4½

ANNUAL CONVENTION OF CANADIAN CONSTRUCTION ASSOCIATION

Endorsation of Home Improvement Plan, and Support Urged for Apprenticeships in Building Industry

FEATURED by a program designed to stimulate building activity and unanimously endorsing the Home Improvement Plan of the National Employment Commission, the nineteenth annual convention of the Canadian Construction Association held in Ottawa on January 11-13, was attended by a large number of delegates, thoroughly representative of the industry and of the various sections of the Dominion. As indicated in the official report of the proceedings, the convention concentrated on such matters as housing and home improvement, and the agenda also included such topics as taxation, accident prevention, apprentice training, registration of contractors, etc.

President's Report

The report of the president, Mr. F. G. Rutley emphasized the progress toward normalcy in all key industries except construction. Its failure to reach its normal volume as compared with the recovery in other industries, he considered to be "the greatest cause of unemployment and its many accompanying problems." He listed three main factors responsible for the "lag" in construction, viz:—"A lack of confidence causing a retardation in the normal requirements of the country; high taxation on property aggravated by the cost of direct relief; and unemployment and low earnings of the people."

Continuing, he observed that while confidence is returning, and employment, and consequently earnings in industry are increasing steadily, yet "taxation on property is not decreasing but would seem to be on the increase in many sections of the country."

Private Construction.—On the brighter side, the president referred to the general recovery already mentioned, and pointed to the marked increase in private construction in 1936 as most heartening, and regarded the increase in industrial and residential construction in 1936 as being "the first real swing from stormy to fair on the construction barometer of our country."

Government Aid.—Indicative of the recognition on the part of governments of the depressed state of the construction industry as being a major factor in unemployment, the president referred to such measures as the Public Works Construction Acts of 1934 and 1935, the Dominion Housing Act and the Home Improvement Plan of the National Employment Commission. He considered that the value of the public works measures are only now being fully realized, while the Housing Act, though of considerable benefit in some sections had been a disappointment in others. He hoped for changes in the Act at the coming session which would make it more effective. The establishment of the National Employment Commission was welcomed as a "constructive step" and the president anticipated that the Commission would submit a plan for low cost housing and other recommendations during the present session.

Shortage of Skilled Labour.—On the subject of apprenticeship, the president expressed himself as follows:—

"During the past year your Executive recognized early the real menace of a shortage of skilled labour in the building trades in those localities where a return to a more normal volume was assured. Skilled men have left Canada, have gone into other lines of endeavour, have become inactive because of advancing years, and very few young men have been apprenticed to the various trades. An Apprenticeship Committee under the chairmanship of Mr. Joseph M. Pigott has been active in conferring with Dominion and Provincial authorities on this subject, with a view to taking steps to correct this situation."

Addresses by Construction Experts

During the sessions the delegates were addressed by a number of prominent authorities on construction and housing administration. Among these were: Mr. Raymond M. Foley, Director of Federal Housing Administration for the State of Michigan; Mr. F. W. Nicolls, Administrator of the Dominion Housing Act; Mr. Tom Moore, Member of the National Employment Commission; Professor W. W. Goforth, Manager of the Canadian Institute of Plumbing and Heating; Mr. David Shepherd, Advisor to the National Employment Commission and Mr. Cecil G. Frost, former Mayor of Lindsay.

Resolutions Adopted

Among the resolutions adopted were those dealing with the Home Improvement Plan, accident prevention, taxation and apprenticeship.

Home Improvement Plan.—The Association, by resolution, expressed itself as being heartily in accord with the timeliness and practicability of the Home Improvement Plan and urged its local affiliates to actively organize in their respective communities, and to take steps to ascertain that no added assessment to properties improved under the plan be made by local authorities.

Accident Prevention.—The convention recommended to all bodies in the Association support of accident prevention and safety organizations with the objective of reducing workmen's compensation costs.

Taxation.—The resolution on taxation was as follows:—"Whereas the committee on real estate taxation is convinced that the principal cause of the lag in building construction is excessive tax on real estate and whereas we believe that the present system of taxation is unfair and unjust to owners of buildings and real estate, and that new construction has been and will be retarded and unemployment prolonged until this condition is rectified, be it therefore resolved that this association endeavour through municipal, provincial, and Federal governments and through any other channels of influence to have the Federal Government appoint a Royal Commission to investigate the entire system of taxation and to recommend changes and improvements that would make it equitable."

Apprenticeship.—The convention adopted the following resolution on apprenticeship:—

"Whereas through the unprecedented slowing down of activity in the construction industry the usual number of trade apprentices have not been in training and whereas due to unemployment in Canada and increasing activity in Great Britain many hundreds of construction artisans have left Canada, and whereas the above condition will assuredly result in a very serious shortage of artisans immediately constructional activity assumes a moderate proportion of its average volume and whereas thousands of untrained youths are now unemployed whose future is uncertain and whose morale is being injured through enforced idleness, therefore be it resolved that we recommend to the Dominion Government that through the National Employment Commission means be provided to encourage apprenticeships in the building industry, and to assist Canadian youth in efforts to learn a trade if and as necessary by diverting funds now being used as unemployment relief or by providing such funds in some other way."

The report of Mr. J. Clark Reilly, General Manager of the Association, indicated the year's activity as reflected in the various meetings held during the year and in the work of the head office at Ottawa in maintaining lines of communication in construction circles across Canada.

MINIMUM WAGES IN ONTARIO

Order Governing Laundries, Dry Cleaning Establishments, Etc.

THE Ontario Minimum Wage Board has issued the following order effective February 1, 1937, applicable to laundries, dry cleaning establishments, etc.:

Order No. 31.—No female employee, or male when replacing a female, of any Laundry, Cleaning and Pressing Parlour, Dry-Cleaning Establishment or Dye Works, in the Province of Ontario, shall be paid wages less than those set forth in the following schedule:—

Population Groups or Zones	Experienced Employees	Inexperienced Employees
A. City of Toronto	$12.50 per week	3 months at $ 9.00 per week 3 months at 10.00 per week 3 months at 11.00 per week Then 12.50 per week
B. Cities of Ottawa, Hamilton, London, Windsor	$12.00 per week	3 months at $ 9.00 per week 3 months at 10.00 per week 3 months at 11.00 per week Then 12.00 per week
C. Remainder of Province	$11.00 per week	3 months at $ 8.00 per week 3 months at 9.00 per week 3 months at 10.00 per week Then 11.00 per week

These wages must be paid for a work period of not more than forty-eight (48) hours in any one week, or for the regular work period in the establishment if less than forty-eight hours.

1. *Application*: This Order fixes minimum wages for female employees, and males when replacing females, of any establishment or separate department of any establishment, where the bulk of the work performed consists of any type of laundering, cleaning, pressing, or dyeing. Without limiting the scope of the foregoing statement, the Order covers all employees of home laundries, steam laundries, hand laundries, cleaning and pressing parlours, dye works, and dry cleaning establishments, whether conducted as separate establishments or as separate departments in connection with other businesses or such institutions as hospitals, hotels and colleges, except those employees engaged for office work, including telephone solicitation, and those who are employed solely in the receiving room, which employees are covered by the Office Order.

2. *Experienced Employees*: Any employee who has been employed by one or more employers for a total period of nine (9) months or more in any branch of work covered by this Order, shall be paid as an experienced employee.

When such an employee is transferred from one department or branch of the work to another or is re-employed after having been engaged in other work for a number of years, she shall still be regarded as an experienced employee and must be paid as such. In special cases of this nature the Board may grant permission to pay a lesser rate during a brief adjustment period.

3. *Maximum of Inexperienced Employees*: The total number of workers paid as inexperienced employees in any establishment shall at no time exceed forty per cent (40%) of the total female working force, except where there are less than five employees, in which case there shall at no time be more than two workers paid less than the rate for experienced employees.

4. *Pieceworkers*: Where employees are paid on a piecework basis, all inexperienced employees during the first three months of their employment in the industry must be paid not less than the wage rates fixed by this Order regardless of the amount earned in accordance with the established piecework rates.

In the case of pieceworkers with more than three months' experience, the Board will accept the piecework rates as being equivalent to the weekly rates as set forth in the schedule provided at least eighty per cent (80%) of the pieceworkers engaged in any operation or in any separate department of the work actually earn, on the basis of the established piecework rates, weekly or hourly wages for each pay period which are not less than the wages prescribed for such workers by the schedule. The twenty per cent (20%) or less of such employees who fail to earn the minimum wage shall be regarded as handicapped workers for whom permits are unnecessary.

The preceding paragraph applies only where four or more pieceworkers are engaged on the same operation or in any separate department or division of the work. Where less than four workers are thus engaged each pieceworker must be paid the full minimum wage according to the schedule.

5. *Handicapped Workers*: Upon receipt of a written application on a form supplied by the Board, which must be signed by both employer and employee, a permit may be granted by the Board authorizing the payment of a lesser rate to any worker who because of a physical or mental handicap, or because of age, is unable to earn the prescribed wage rates.

6. *Part-time and Short-time Work*: Employees engaged for part-time only, and regular employees when working on short-time, may be paid on an hourly basis at rates equivalent to the weekly rates prescribed above, to be determined by dividing the weekly wage by 48 or by the regular weekly work period in the establishment if less than 48 hours.

7. *Overtime:* All time worked by an employee in excess of forty-eight (48) hours in any week shall be paid for in excess of the prescribed weekly wage at a rate of not less than the regular wage rate as determined for part-time work.

8. *Waiting Time*: All time during which an employee is required to wait for work on the premises of the employer shall be counted as working time and shall be paid for at the regular wage rate as determined for part-time work.

9. *Lost Time*: No deduction for absence which brings the wage of an employee below the minimum prescribed by the schedule shall exceed the value of the time lost reckoned at the rate as determined for part-time work.

As a result of a resolution adopted at the provincial convention of the Alberta Social Credit League the adoption of state medicine in Alberta at the earliest possible date will be pressed upon the provincial government.

ANNUAL REPORT OF THE DEPARTMENT OF IMMIGRATION AND COLONIZATION 1935-36

The nineteenth annual report of the Department of Immigration and Colonization for the fiscal year ended March 31, 1936, again records a slight reduction in immigration, indicative of the effective operation of existing regulations which "reflect the policy of the government to limit immigrant admissions to such numbers as can be successfully absorbed without detriment to residents of Canada."

Immigrant arrivals in 1935-36 numbered 11,103 compared with a total of 12,136 in the previous year, or a decrease of 8·5 per cent. Over a four-year period (1933-1936) the report shows that there has been a decline of 44 per cent in the number of immigrants. Of the classes admitted during the year, 2,507 were adult males, 4,554 adult females, and 4,042 children under 18 years of age. A considerable proportion were wives and children joining heads of families successfully established in Canada; 64 per cent of the immigrants were from the British Isles and the United States, the balance from other countries.

The importance of the tourist trade to Canadian business is indicated in the figures given in the report concerning "non-immigrant" admissions. These figures show that tourists and visitors are being attracted to Canada in ever-increasing numbers. During the fiscal year reviewed by the report, 25,080,159 persons entered Canada in this category compared with 22,773,181 persons in 1935 and 20,898,225 persons in 1934.

The report also indicates that the return to Canada for permanent residence of persons born in Canada who had not relinquished their status as British subjects continues, although in somewhat smaller numbers. During the fiscal year ended March 31, 1936, the number of returning Canadians totalled 4,854 compared with 5,811 in 1935 and 16,320 persons in 1933.

Land Settlement.—The report of the Chief Commissioner of Colonization deals with the settlement activities of the department. This work which has been undertaken in co-operation with the Canadian Pacific Railway and the Canadian National Railway has continued to be directed mainly to internal colonization. The work includes the settlement on land of families resident in Canada with previous farm experience and sufficient personal capital to engage in farming, and the placement of able-bodied single men in farm employment. The three agencies have settled 2,918 families and placed 7,132 single men in the period under review.

Relief Land Settlement.—This settlement plan (Labour Gazette, March, 1934, page 218) had its origin in the belief that it was in the interests of qualified unemployed families and of the tax-payers to capitalize non-productive relief expenditures to enable such families to become self-supporting on the land. Under Dominion-Provincial Agreements, which expired March 31, 1936, the Dominion, province and municipality concerned jointly contributed a sum of $700 per family to cover the cost of modest establishment and subsistence in the initial stages of settlement. The province is responsible for administration of settlement including selection of families, inspection and selection of suitable lands and supervision. The province is assisted by an Advisory Committee, which includes representatives of the Dominion Land Settlement Branch and the Colonization Departments of the railways.

The report shows that at March 31, 1936, this arrangement had resulted in the settlement of 3,509 families including 18,577 persons. It is also stated in the report that the provinces of Manitoba, Alberta, Quebec and Nova Scotia have asked for new agreements and that the first three provinces have recommended that the joint settlement fund be increased to $1,000 per family. It is stated that the province of Manitoba reported that relief settlement has proved to be the most satisfactory unemployment relief measure adopted by that province. The provinces of British Columbia, Saskatchewan, Quebec and New Brunswick have submitted for consideration of the Dominion long-range programs of settlement and development. These programs, the report states, include Dominion-Provincial assistance to put settlers in new homestead areas on a self-supporting basis and the construction of colonization roads.

The Supreme Court of the United States, in an opinion delivered recently, upheld the validity of the Ashurst-Sumners Act of 1935 which forbade the shipment of convict-made goods into states prohibiting the sale of such goods, and required all interstate shipments of convict-made goods to be clearly marked as to their origin.

IMMIGRATION TO CANADA DURING THE CALENDAR YEAR 1936.

THE accompanying tables, issued by the Immigration Branch of the Department of Mines and Resources, show the nature and extent of immigration into Canada during the calendar year 1936, with some comparative figures for 1935.

Out of a total of 11,643 immigrants entering the country during 1936, 2,197 were British, an increase of 4·5 per cent over the number of British immigrants arriving the previous year. A decrease of 7·8 per cent in the number of United States immigrants arriving in Canada during 1936 is recorded, there only being 4,876 immigrants giving the United States as the country of origin. Northern European races accounted for 817 immigrants, an increase of 29·5 per cent over the previous year. All other races making up a total of 3,753 accounted for the balance of the grand total and showed a 15·4 increase over 1935.

CO-OPERATION IN GREAT BRITAIN

Review of Activities of Co-operative Societies in 1935

THE development and diversity of the Co-operative movement in Great Britain is indicated in a report on the operations of co-operative organizations in Great Britain which appears in the January issue of the *Ministry of Labour Gazette*. This report, which is for the year 1935, was compiled by the Chief Registrar of Friendly Societies from statutory returns and from information supplied by the Co-operative Union Limited.

At the end of 1935 there were 1,267 registered industrial co-operative societies in Great Britain mainly engaged in the supply of commodities, or 12 less than in 1934. Of this total of 1,267 societies, 1,152 were retail societies, and 115 were wholesale and productive societies.

The number of persons employed in distribution by the retail and wholesale and productive societies was 182,000 (113,000 males aged 18 years and over, 34,000 females aged 18 years and over, and 35,000 persons under 18 years of age), and the amount paid in salaries and wages was £23,895,000. Corresponding figures for 1934 were: employees, 170,000, and salaries and wages, £22,447,000.

Retail Societies

Of the 1,152 retail societies engaged in distribution, 1,098 were general supply stores.

The sales of the general supply stores (including revenue from service departments) totalled £218,649,000 and represented an increase of £13,401,000 over 1934. These societies had 7,414,000 shareholding members at the end of the year with share capital amounting to £134,981,000. They returned an aggregate surplus on the year's working of £26,625,000, of which £4,808,000 was distributed as interest on share capital and £20,329,000 as dividends on sales. Their investments totalled £120,294,000, of which about £87,000,000 was invested in other co-operative societies, mainly in the Co-operative Wholesale Society, Ltd.

Wholesale and Productive Societies

There was 115 wholesale and productive societies at the end of 1935. The bulk of the business of the group, however, was conducted by the Co-operative Wholesale Society, Ltd., the Scottish Co-operative Wholesale Society,

Ltd., and the English and Scottish Joint Co-operative Wholesale Society, Ltd.

The sales of the three wholesale societies in 1935 (excluding goods invoiced by the joint society to the two parent societies) amounted to £118,183,000. They had a total shareholding membership of 1,842, of which 1,271 were retail societies and 571 were employees of the Scottish wholesale society, an aggregate share capital of £14,822,000 (excluding £2,409,000 share capital provided by the English and Scottish wholesale societies for the joint society), loan capital of £69,242,000 and a balance of reserves and undivided profit amounting to £11,295,000.

Production.—In 1935, there were 982 societies whose activities included the production of commodities. The number of persons employed in production was over 98,000 (57,000 males aged 18 years and over, 27,000 females aged 18 years and over, and 14,000 persons under 18 years of age); the amount paid as salaries and wages was £12,912,000, and the value of productions (including materials) was £82,896,000.

Farming.—Farming is carried on by a number of retail societies. During 1935 there were 99 societies undertaking farming operations, apart from those which maintained land for accommodation and grazing purposes only. In only 40 cases did these operations result in a surplus. The surpluses returned aggregated £13,000 as compared with £15,000 in 1934; the losses aggregated £32,000 as against £45,000 in 1934. The total acreage of farms of retail societies was 34,000 and the total capital invested in farm land and buildings, implements, stock, etc., was about £1,380,000. The sales or transfers of farm produce, etc., totalled £534,000.

Share of Employees in Membership, Capital and Management

In the retail societies generally, employees have no prescribed right as employees to share in the capital and management of the societies, although they may become shareholding members (with full right as such) in the ordinary way. In the wholesale and productive societies (other than the three principal wholesale societies), however, the registered rules frequently provide for the employees, as such, not only to share in the capital but also to become members of the committee of management. Employees shared both in capital and in management in 53 of these societies. These 53 societies, whose sales in 1935 amounted to £2,635,000, had a total shareholding membership of 15,626, of whom 5,850 were employees. Of the 459 committeemen of these societies, 255, or 56 per cent, were employees, 53, or 11 per cent, were representatives of societies and the remaining 151, or 33 per cent, were other individual members. The total share capital of these societies amounted to £528,000, of which 30 per cent was held by the employees who also held 25 per cent of the aggregate loan capital of £456,000.

Services

As indicated in the report, the services provided by the co-operative movement are varied in character, but the principal are banking, insurance, and laundering.

Banking.—The Co-operative Wholesale Society, Ltd., has as a separate department a bank which provides all banking services and conducts the banking business of almost all the societies in the co-operative movement. Receipts on deposit and current account in 1935 totalled £342,846,000 (excluding a transfer from current to deposit account) and the aggregate balances of deposit and current accounts at the end of the year amounted to £73,648,000 and £16,942,000 respectively.

Insurance.—The Co-operative Insurance Society, Ltd., is owned by the Co-operative Wholesale Society, Ltd., and the Scottish Co-operative Wholesale Society, Ltd. The society does extensive business in all the main branches of insurance with the exception of marine risks. The total premium income for all departments in 1935 amounted to £6,992,000, an increase of £652,000 over 1934. More than half of the premium income was in respect of industrial assurance. Collective life assurance, which is undertaken largely in conjunction with the retail societies, accounted for £476,000 of the premium income.

Laundering.—Many retail societies themselves undertake laundering, but others have combined to form separately registered federal laundry societies to perform this service in the areas covered by the retail societies concerned.

A report entitled "The Wire and Wire Goods Industry, 1935," issued by the Dominion Bureau of Statistics, shows that during 1935 there were 71 factories in Canada in that industry, an increase of two establishments in this group over 1934. The average number of employees in 1935 was 3,477 of which 2,205 worked in plants in Ontario and 829 in Quebec,—the two provinces where the industry was mainly located. The 516 salaried employees were paid $949,495 during 1935, and the 2,961 wage-earners were paid $2,803,495, a total of $3,752,990 for salaries and wages. In 1934, the number of employees was 3,163 and salaries and wages amounted to $3,272,740.

LABOUR LEGISLATION IN THE UNITED STATES

The Division of Labour Standards of the United States Department of Labor has published Bulletin No. 9 (recently received) containing a digest of State and Federal labour legislation enacted between September 15, 1935, and September 15, 1936.

The following extracts from the bulletin indicate the trend of labour legislation in the United States.

Social Security.—Enactments on some phase of social security were made by each of the 28 State legislatures in session. Unemployment compensation funds were set up by Idaho, Indiana, Louisiana, Mississippi, Oregon, Rhode Island, South Carolina, while Utah repealed its 1935 law that had not been in effect and enacted a new one, bringing the total number of unemployment compensation laws to 16* of which 15 have been approved by the Social Security Board. Existing unemployment compensation laws were amended in Alabama, Massachusetts, New York, and New Hampshire. Colorado has set up a commission to study the subject and report to the Governor and the next Legislature. Minnesota likewise provided for a commission to study the general subject of social security and the problem of simplifying and correlating the administration of its existing welfare laws. Mississippi and South Carolina this year accepted the Wagner-Peyser Act, provinding for a Federal-State public employment service, bringing the total of States which have accepted to 43.

Old-Age Assistance.—The problem of raising standards for old-age assistance in order to obtain Federal grants-in-aid was the subject of legislation passed by 22 States. Kansas, Louisiana, and South Carolina are submitting constitutional amendments to permit the enactment of social security laws. Oklahoma has adopted two constitutional amendments establishing a mandatory, Statewide system of old-age assistance. Virginia has a commission studying the subject. Thirty-seven States and the District of Columbia had received approval of their old-age assistance plans from the Social Security Board by September 15, 1936.

*Since this bulletin was published, the Division of Labour Standards has announced in the January, 1937 issue of its Survey of Labour Law Administration that unemployment compensation laws have been enacted in 35 States as well as the District of Columbia. All have been approved by the Social Security Board as meeting the requirements of the Social Security Act (LABOUR GAZETTE, September, 1935, page 801).

Administration of Labour Laws.—The strengthening and reorganization of State agencies administering labour laws continued to progress with the setting up of State departments of labour in Louisiana and South Carolina. In Kentucky, as part of a general reorganization of State administration, a department of industrial relations was created which will ultimately combine mediation and arbitration, workmen's compensation, employment service, factory inspection, and enforcement of laws for women and children.

Workmen's Compensation Laws.—Eight States amended their workmen's compensation laws. The most significant changes were those made in the systems of occupational disease compensation. Illinois repealed and re-enacted its occupational disease law, providing a special schedule of compensation. New York amended the law passed in 1935 by enacting a different schedule of compensation for silicosis and other dust diseases, which considerably reduced the benefits to workers as well as the cost to the employer and insurance carrier. Rhode Island provided for the first time for occupational disease coverage, limited to 31 diseases.

Occupational Diseases.—In each of these States (refered to in the previous paragraph) the occupational disease compensation legislation has been supplemented by attacks on the problem from a different angle, namely, prevention of the disease hazards. Illinois enacted a new general health and safety law, giving its Industrial Commission rule-making power to deal with sanitation and ventilation, elimination of fumes, gases, and dusts, machine-guarding, and hazards caused by artificial atmospheric pressures. At the same time a temporary law setting up definite standards for hoods and blowers in connection with grinding, buffing, and polishing machinery was enacted to bridge the gap until the commission shall promulgate its rules. New York likewise authorized and instructed the Industrial Commission to make rules and regulations for the elimination of harmful dusts in dusty industries, and made it obligatory for the State, the municipalities, and public-works contractors to install and maintain dust-eliminating devices approved by the board, wherever a dust hazard attended their projects. Rhode Island created by law a division of industrial hygiene within the State Department of Health and specified the performance of certain functions in connection with industrial disease hazards.

Hours of Labour.—Rhode Island reduced the maximum hours permitted by State law for women and minors under 18 in a broad field of employment from 10 to 9 a day and from 54 to 48 a week, except that daily hours may be lengthened to permit a 5-day week. The hours for children under 16 in mercantile or business establishments were still further curtailed. South Carolina enacted a law—effective only after the passage of similar laws in Georgia and North Carolina—restricting the hours of all employees in textile mills to 8 a day and 40 a week, distributed over not more than 5 working days. Other States broadened the coverage of their hours laws to give the benefits of the existing daily and weekly limitations to new groups of workers.

Child Labour.—Important changes in child labour laws are to be noted in two States. Rhode Island fixed 16 as the minimum age for employment in factories and mechanical establishments and also in certain other employments during school hours. Under its new homework law, children under 16 are not permitted to perform industrial homework. Virginia increased the number of hazardous occupations from which minors are barred until they reach 18, some of which formerly had a 16-year limit. Massachusetts has directed the Department of Labor and Industries to report to the legislature by December of this year (1936) which dangerous occupations now permitted to minors between 16 and 18 should be prohibited to all under 18.

Collective Bargaining.—Among the Federal Acts passed between January and June, 1936, at the second session of the Seventy-fourth Congress are a number of laws and resolutions affecting labour. Those bearing particularly upon collective bargaining and the right to organize include an act prohibiting the inter-state transportation of strike breakers, an act authorizing the National Mediation Board to set up a National Air Transport Adjustment Board, and a Senate resolution for an inquiry into infringements on freedom of speech and assembly, and the right to organize and bargain collectively.

Labour Conditions in Government Contracts.—The bulletin states that "Following the passage of the Walsh-Healy Bill (LABOUR GAZETTE, November, 1936, page 978) Government contracts will no longer be awarded to the lowest bidder regardless of labour standards observed on the job." After September 28, 1936, the effective date of this Act, Federal contracts were to specify the fulfilment of certain conditions including a basic 8-hour day and 40-hour week, safe and sanitary working conditions, and a pledge not to employ child labour or convict labour. Contractors were also to be required to pay not less than the prevailing minimum wages in their localities as determined by the Secretary of Labor. The Secretary of Labor is given broad rule-making power to administer the Act.

Employment of Seamen.—New regulations governing the employment of seamen and engine-room employees in sea-going American merchant marine are contained in an Act approved June 25, 1936. Three watches of 8 hours each, instead of two, the institution of "continuous discharge books," and periodic sanitary inspection of crew quarters on all American vessels are provided for in the Act. A United States Maritime Commission has been established to investigate employment conditions and wages in ocean-going ships with a view to revising the terms upon which subsidies are granted and to incorporate in such contracts minimum wage scales, reasonable working conditions and minimum manning requirements. The Commission is endowed with certain powers formerly vested in the United States Shipping Board and Department of Commerce.

Investigations.—The Secretary of Labor was also authorized and directed by Congress to report upon (1) the question of labour-saving devices and the displacement of labour; (2) the social and economic needs of migratory labour with recommendations for remedial legislation.

National Conference on Labour Legislation

The January issue of the Survey on Labour Law Administration published by the Division of Labour Standards, United States Department of Labor, contains a summary of the Third National Conference on Labour Legislation held in Washington in November (a review of establishment and functioning of this conference appeared in the LABOUR GAZETTE, December, 1935, pages 1118-21).

At the third National Conference the following major objectives were agreed upon as co-operative enterprises of the States and the Federal Government:—

The development of integrated State labor departments with broad powers and adequate appropriations to perform both fact-finding and administrative functions, and to suggest programs of labor legislation.

The development of effective and unified National leadership and co-operation with the States through placing in the United States Department of Labor all Federal functions directly affecting labor.

Continuing full participation of the United States in the work of the International Labour Conference and the International Labour Office as essential agencies for raising of standards of labor legislation throughout the world.

Federal co-operation with the States in the maintenance of a 16-year minimum for entrance into industry, with special protection against employment in hazardous occupations up to the age of 18 years; completion of ratification of the child labor amendment, as an essential step in his direction by the 12 States whose action is still required.

A study by the Department of Labor of methods of administration of State and Federal statutes providing for payment of prevailing rates of wages on public works.

The adoption by the States of legislation providing for the State-use system of prison-made goods and compilation and distribution by the United States Department of Labor of information to serve as a basis of such legislation.

Inquiry by the United States Department of Labor into the extent of the limitation of the poll tax upon the right to vote and co-operation with the State Federation of Labor and other groups interested in the elimination of this restriction.

Appointment of a committee by the Secretary of Labor to investigate ways and means of accomplishing better employer and employee relations in the interest of industrial peace, including as subjects for study collective bargaining, the use of injunctions in labour disputes, "yellow dog" contracts, use of strike-breakers and labour spies, and conciliation and arbitration functions.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Reduction of Hours of Work in the Printing Trades and Chemical Industry

A Preparatory Technical Tripartite Meeting on the reduction of hours of work in printing and kindred trades was held at the International Labour Office from November 30 to December 4 last. A full report of this meeting appears in "Industrial and Labour Information," the weekly publication of the International Labour Office, in its issue of December 21.

The following seventeen countries, all having over 15,000 persons working in these trades, sent representatives: Argentina, Austria, Belgium, Chile, Czechoslovakia, Denmark, France, Great Britain, India, Japan, Netherlands, Norway, Spain, Sweden, Switzerland, Turkey, United States.

At the opening of the meeting, the Director of the International Labour Office made it clear that this gathering had no responsibility for the preparation of the reports which will be submitted to the International Labour Conference which is to be held in the month of June next, at which the question of the reduction of hours of work in printing and kindred trades is to receive attention. The meeting, he said, had to consider two particularly important points; the first was the problem of shorter hours, considered from the broadest possible standpoint, account being taken of the incidence of unemployment, the economical and technical factors involved, the effects of mechanization, etc.; the second was the determination of the scope of the printing and kindred trades for the purpose of reduced hours.

The report of the meeting given in "Industrial and Labour Information" indicates that there were several days devoted to a general discussion of the problem of working hours in printing and kindred trades. There was considerable divergence of view among those who took part in the discussion. The concluding sessions of the Conference were devoted to a delimitation of the industry, based on proposals which had been put forward by the Workers' representatives.

Chemical Industry

A Preparatory Technical Tripartite Meeting on the reduction of hours of work in the chemical industry was held at the International Labour Office from December 7 to 11 last, a full report of which appears in the December 28 issue of "Industrial and Labour Information," the weekly publication of the International Labour Office. The states members of the International Labour Organization having 40,000 persons employed in the industry were invited to attend, while other states with a chemical industry of importance were also free to send representatives. Eleven states were represented at the meeting, namely: Belgium, Chile, Czechoslovakia, France, Great Britain, Japan, Netherlands, Norway, Spain, Turkey and United States of America.

Before the meeting began its discussions, the Director of the International Labor Office made a statement as to its scope. Of two documents which had been put before them, the first gave a summary survey of the actual hours worked in the chemical industry in different countries, and formed part of the report which the Office was to submit to next year's Conference. This draft report was sub-

mitted to the meeting in order that the Office might obtain the benefit of any assistance which the Preparatory Technical Tripartite Meeting might be in a position to give. The second document dealt more particularly with the definition of the chemical industry. The Director hoped that the meeting would throw some light on this very difficult question. He also made it clear that it was not the object of the meeting to arrive at any conclusions on the subject of hours of work, but rather to examine the whole question in its broadest aspects; the incidence of unemployment, the effects of mechanization, the economic and technical problems involved, etc.

Four sittings were given up to the general discussion in which twenty-seven speakers took part. The report of the discussion given in "Industrial and Labour Information" indicates a considerable divergence of opinion among the representatives.

A note prepared by the International Labour Office was accepted as a basis for the delimitation of the chemical industry. This note was examined by the meeting point by point, many of the proposals being accepted without comment, while in other cases suggestions of value were offered by the technical experts who were in attendance.

UNEMPLOYMENT IN CANADA AS REPORTED BY TRADE UNIONS FOR THE YEAR 1936

Statements are forwarded to the Department of Labour monthly by Local Trade Unions throughout Canada showing their membership and the number of members unemployed on the last day of each month, this data providing a medium in establishing the labour trend among organized workers from month to month. Locals reporting each month during 1936 averaged 1,798, including on an average 177,653 members, 13·2 per cent of whom were on an average unemployed.

There was a rather generous and widespread measure of prosperity reflected among organized labour throughout Canada during 1936, there being in evidence the most favourable trend of economic revival since the close of 1931. The best situation shown during the year was in August when 10·8 per cent of the members reported were without work, and this percentage was the smallest that has been registered in any month of our records since October, 1930. The percentage of 15·1 in April constituted the peak of unemployment for 1936. Not since 1929 has the unemployment maximum been at so low a level. Comparative analysis for the year surveyed with previous years affords an accumulating evidence of improving conditions, building, transportation and communication all showing progress each month over the corresponding month of 1935, and impressive recovery has been apparent in these trades and industries for several years past. The situation in manufacturing and retail trade was also generally optimistic, November and December being the only months in 1936 to reflect a slight lessening in employment over 1935 conditions. The fishing industry, with the exception of June, August, November and December, reported gains over 1935 which were particularly noticeable in the early months of the year. Lumbering and logging in January and February were much more active than in the corresponding months in 1935 but during March and April there was some slackening off in activity. For the remainder of the year, however, continued employment advances were noted. Conditions in coal mining were variable when compared with 1935 and on the whole appeared slightly quieter. In the services group February, March and April returns indicated curtailment in available work on a small scale from the previous year but in the other months the employment movement was upward.

There was a slight tendency toward retarded activity among Local Trade Unions throughout Canada during January from the close of 1935, coal mining in the Western areas showing some employment cessation. In February, however, the majority of industries combined in effecting a somewhat better situation than in January. Coal mining, and building and construction operations in both March and April suffered the rather adverse effect of seasonal conditions, influencing the situation in a less favourable direction for the country as a whole during these two months. The May trend was toward heightened activity though the change from April was but nominal, and this better movement continued and was extended without interruption until the close of August. In September and October the level of activity remained approximately the same as in August, nominal increases and decreases in the various trades and industries offsetting each other, but with November slackening off in available work was rather generally apparent and this downward employment tendency was in evidence until the close of the year.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER, 1936

THE work of the offices of the Employment Service of Canada during the quarter October to December, 1936, as indicated by orders received and placements effected, was over 4 per cent higher in volume in the first instance and nearly 3 per cent more in the second than during the corresponding quarter of 1935. A heavy loss was recorded in placements in construction and maintenance, owing to curtailment of relief work in all provinces except Quebec, but this decline was more than offset by substantial gains in farming, services and logging. Changes in other groups were not so pronounced, there being moderate losses shown in mining and trade and small gains in transportation and manufacturing. Provincially, Nova Scotia, Quebec and Saskatchewan recorded more vacancies and placements than in the fourth quarter of 1935, while the remaining provinces reported fewer; Quebec showing the highest gain in placements and Ontario the greatest loss. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period October to December, 1936.

From the chart appearing elsewhere in this issue, which accompanies the article on the work of the Employment Service for the month of December, it will be noted that the curve of both vacancies and placements in relation to applications showed little variation during the first half of October, but followed a sharp upward trend the latter half of that month, remaining practically stationary during November, then again following a marked upward course until the end of December, when the levels attained were slightly higher than those recorded at the close of the corresponding month a year ago. During the period October to December, 1936, there was a ratio of 52 vacancies and 48·7 placements for each 100 applications for employment, as compared with 53·4 vacancies and 50·9 placements during the corresponding period of 1935.

The average number of positions offered daily during the quarter under review was 1,335, of applications registered 2,566, and of placements effected 1,251, in contrast with a daily average of 1,282 vacancies, 2,399 applications and 1,220 placements in regular and casual employment during the last quarter of 1935.

During the three months, October to December, 1936, the offices reported that they had referred 99,289 persons to positions and had effected a total of 95,024 placements, of which 70,468 were in regular employment and 24,556 in casual work. Of the placements in regular employment, 55,986 were of men and 14,482 of women, while casual work was found for 14,397 men and 10,159 women. Comparison with the same period in 1935 showed that 92,716 placements were then made, of which 63,016 were in regular employment and 29,700 in casual work. Applications for employment during the period under review were received from 151,021 men and 43,976 women, a total of 194,997, in contrast with a registration of 182,316 persons during the same period of 1935. Employers notified the Service of 101,421 vacancies, of which 72,162 were for men and 29,259 for women, as compared with 97,373 opportunities for work during the last quarter of 1935.

A report in detail of the transactions of the Employment Service for the month of December, 1936, will be found elsewhere in this issue.

EMPLOYMENT CONDITIONS IN CANADA AT THE END OF JANUARY, 1937

Reports of Superintendents of the Employment Service of Canada

THE employment situation at the end of January, 1937, was reported by the Superintendents of the Employment Service to be as follows:—

Farming in the Maritime Provinces showed little activity although many farmers were busy hauling their firewood for the year. Apple shipments from Halifax were made on seven boats to the United Kingdom and on one boat to both Hamburg and Antwerp. Logging conditions were much improved as snow and frost had facilitated hauling. Cod and haddock fishing was good at Halifax but at Saint John drift ice along the coast had caused operations to be abandoned. Smelt fishing was fair. Coal mines in the New Glasgow area operated from two to six days per week while those in Cape Breton worked from three to six days, except one mine, which was idle. Blast furnaces and iron and steel mills were busy with improved outlook. Clay and wood products are operating on full time and lumber mills taking on extra help. Sugar refineries are working a full day crew and part night. Passenger traffic is well maintained and the movement of freight heavy. There was much activity on the waterfront. Trade both wholesale and retail was quiet. There was a good demand for domestics and char-workers.

Farming was quiet in the Province of Quebec but logging active except at Hull where unfavourable weather had proved a hindrance. Mines at Rouyn were very busy. There was improvement in the manufacturing industries. Aluminum plants at Chicoutimi were working at full capacity. In Montreal metal trades, rubber, and boot and shoe factories showed improvement but quietness prevailed in clothing and tobacco plants. Conditions were better in Quebec City but quiet in Hull. All factories were active at Three Rivers, especially the paper mills. Building was somewhat quieter resulting from a decrease in relief works and highway work was continued on a reduced basis. Transportation was fair and trade good. There was a brisk call for hotel and restaurant employees and general housemaids in domestic service and many placements were made.

The demand for farm hands in the Province of Ontario was small. Logging operations were nearing completion but a demand for pulp cutters continued. Hauling operations were proceeding although retarded in some districts due to lack of snow. Mining continued to be active but there were very few calls for additional help. Manufacturing plants continued to be busy with small staff additions. This was particularly noticeable in the iron and steel group. Very little building was in evidence other than repairs and alterations, although reports were optimistic for the future. The Women's Divisions made many placements in domestic service but have large calling lists of inexperienced help. The demand for experienced cooks and cook-generals was in excess of supply.

There was very little demand for farm hands in the Prairie Provinces as most farmers had secured their help under the Farm Improvement and Employment Plan, which scheme has now been terminated. A good demand for experienced bush workers continued through offices at Winnipeg, Prince Albert and Edmonton. Coal mines in Alberta were working to full capacity owing to the severe weather. Manufacturing showed no change except in Alberta where a slight improvement was reported due mainly to activity in the oil fields. Except for relief projects there was no activity in the construction group. There was a decrease in the demand for household workers.

Owing to the continued cold weather in British Columbia very few orders were received for farm workers. Snow falls and severe weather had caused the closing down of logging camps. Sawmills and shingle mills were also being delayed by the frosty weather. Mining was quite active but no requests were received for additional workers. The waterfront continued to be busy at Vancouver but at Prince Rupert not much was moving except shipments of frozen fish. From Victoria it was reported that all outside work was suspended owing to the extreme cold. This affects logging and holds up shipments of lumber through this port. There was a good demand for household workers and all applicants with experience are able to secure employment.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN DECEMBER, 1936

THE following information as to the employment situation in Canada is based upon reports from the following sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reported on January 1 was 10,034, the employees on their payrolls numbering 1,044,411 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for December was 1,816, having an aggregate membership of 186,163 persons, 14·3 per cent of whom were without employment on January 1. It should be understood that the report on the number of unemployed workers refers only to organized labour, definite figures not being available as to the number of unorganized workers who were without employment during the period reviewed.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 58 cities throughout Canada showing the value of permits granted during the period for various classes of building construction, these figures indicating the degree of activity prevailing in the building trades.

(1) The Employment Situation at the Beginning of January, 1937, as Reported by Employers

Data tabulated by the Dominion Bureau of Statistics show that industrial activity has invariably declined at the first of January, there being in the years 1921-1936, an average decrease of about seven per cent in the staffs reported as compared with a month earlier. The customary contraction was indicated at the opening of the present year, but, on the whole, this involved a smaller-than-average proportion of the workers covered in the monthly surveys of employment. The persons released from the staffs of the 10,034 firms co-operating at January 1, 1937, numbered 59,333, the reported payrolls being reduced from 1,044,411 at December 1, 1936, to 985,078 at the date under review, or by 5·7 per cent.

The crude index for January 1, 1937 (based on the 1926 average as 100) stood at 103·8, as compared with 110·1 in the preceding month, and 99·1 at the same date in 1936; in consequence of the less-than-normal reduction at the latest date, the seasonally corrected index rose to 111·1 at January 1, 1937, compared with 107·8 at the beginning of December, 1936.

The following shows the unadjusted indexes as at January 1 in the seventeen years for which data are available: 1937, 103·8; 1936, 99·1; 1935, 94·4; 1934, 88·6; 1933, 78·5; 1932, 91·6; 1931, 101·7; 1930, 111·2; 1929, 109·1; 1928, 100·7; 1927, 95·9; 1926, 90·7; 1925, 84·9; 1924, 89·8; 1923, 87·3; 1922, 78·8 and 1921, 88·8.

As is customary at the time of year, the contractions in many instances resulted from shutdowns for inventory and over the holiday season, with the anticipation of an early resumption of activity. The experience of the last sixteen years shows that usually (though not invariably), there is at February 1 a partial recovery from the general losses recorded at the beginning of January.

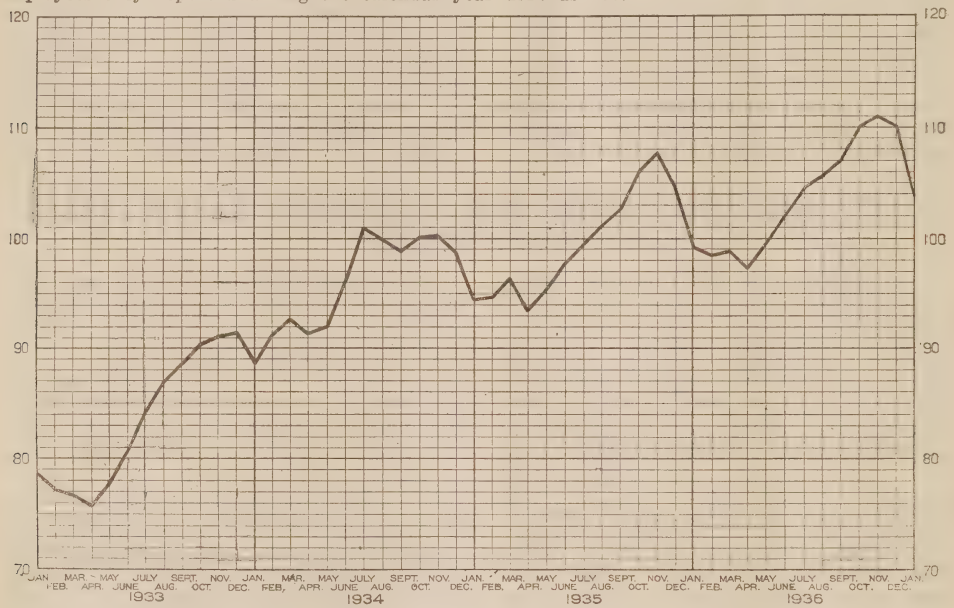
The most pronounced curtailment at the date under review was in construction and manufacturing. The reduction in the former, involving over 22,300 persons, was unusually large, having been exceeded only four times at January 1 in the last sixteen years. The reverse was the case in factory employment, from which some 23,200 men and women were released, or little more than two-thirds of the average decrease in personnel at the beginning of January in the years since 1920. The decline in manufacturing operations at the latest date constituted just over 39 per cent of the total decrease in all industries, as compared with an average proportion of 57·8 per cent in the years since 1920. The recession in manufacturing at the beginning of January in other years of the record has always been followed by a revival during the month, although in no case has the recovery indicated at February 1 equalled the shrinkage noted in the preceding report. Within the manufacturing group, the largest losses at January 1 occurred in food, textile, lumber, pulp and paper and leather factories.

Among the non-manufacturing industries, there were pronounced seasonal decreases in construction, as already mentioned, while there were contractions on a smaller scale in logging, mining, wholesale trade and transportation. On the other hand, hotels and restaurants and retail trade reported decided improvement.

For January 1, 1936, 9,409 employers had made returns showing that they had an aggregate staff of 933,107 men and women, compared with 985,481 in the preceding month. The largest losses had then taken place in manufacturing and construction.

Employment by Economic Areas

Each of the five economic areas recorded seasonally reduced activity. As is usual at the time of year, firms in Quebec and Ontario laid off the greatest number of workers, mainly owing to the concentration of manufacturing operations within their borders. The situation in four of the five economic areas was better than at the beginning of January last year; only in the Prairie Provinces was the index slightly lower than at the same date in 1936.



Maritime Provinces.—There was a contraction in employment in the Maritime Provinces at January 1; this occurred chiefly in manufacturing and construction. Within the former, lumber, iron and steel and food factories recorded the greatest losses. Logging, mining and trade were also rather slacker. On the other hand, transportation showed heightened activity, owing to the reopening of the winter ports. Statements were received from 695 firms employing 78,972 persons, compared with 83,053 at the beginning of December. The general decline at the date under review is seasonal, although it exceeds the average decrease recorded at January 1 in the years since 1920.

A total of 654 employers had furnished data for January 1, 1936, showing payrolls aggregating 77,185 workers, a contra-seasonal increase of 423 over their staffs in the preceding month. The index then, however, had been slightly lower, standing at 108·1, as compared with 109·5 at the date under review.

Quebec.—The curtailment in Quebec was rather larger than that which took place at January 1 of last year, and was also greater

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

than the average decline at the same date in the years since 1920. The index, at 104·0 at the latest date, was eight and one-half points higher than at the beginning of 1936. Manufacturing (notably in pulp and paper, textile, food, leather and lumber plants), logging, transportation and construction reported the most pronounced losses, but the tendency was also downward in mining, communications and trade. On the other hand, moderate improvement took place in hotels and restaurants. In many cases, operations will have been resumed early in the New Year in the establishments closed down over the holiday season and for purposes of inventory. The labour forces of the 2,378 co-operating employers aggregated 288,330 workers, as against 312,069 at December 1, 1936.

For January 1, 1936, 2,231 firms had reported a staff of 263,589 men and women, compared with 286,477 in the preceding month; the index then stood at 95·5.

Ontario.—Manufacturing showed considerable curtailment in Ontario, that in food, textile, lumber, leather and pulp and paper factories being most noteworthy; on the other hand, increased activity was indicated in tobacco and beverage, iron and steel and non-ferrous metal works. In the non-manufacturing industries, there were large contractions in mining, transportation and construction, while logging and retail trade showed further improvement. A combined payroll of 417,462 persons was employed by the 4,466 firms whose returns were received, and who had 438,319 employees at December 1. The contraction was much larger than that noted at January 1 of last year, but was smaller than the average loss recorded at that date in the years since 1920; the index, at 107·5, was nearly five points higher than at January 1, 1936, and was also higher than at the beginning of January in any of the preceding five years. The employers furnishing data for January 1 of 1936 had numbered 4,169, and their employees, 393,917; in the preceding month, they had employed 410,402 men and women.

Prairie Provinces.—Declines on a much smaller scale than at the opening of 1936, were noted in the Prairie Provinces. Statistics were tabulated from 1,453 employers of 119,737 workers, or 5,570 fewer than at

Jan. 1, 1937	103·8	109·5	104·0	107·5	94·2	95·4
Relative Weight of Employment by Economic Areas as at Jan. 1, 1937	100·0	8·0	29·3	42·4	12·1	8·2

Note.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated area, to the total number of all employees reported in Canada by the firms making returns for the date under review.

December 1. This decline was also less than the average loss experienced at the beginning of January in the years since 1920. The index at January 1, 1937, stood at 94·2, as compared with 95·1 at the same date in 1936. Manufacturing and construction reported the most marked losses at the date under review, but transportation also showed considerable curtailment. On the other hand, improvement occurred in logging, coal-mining and retail trade. For January 1, 1936, 1,374 firms had reported an aggregate working force of 120,252, which was smaller by 7,837 than in the preceding month.

British Columbia.—The recession in British Columbia did not involve so many workers as that indicated at January 1 of last year, when the index, at 92·4, was lower than that of 95·4 at the date under review. The 1,042 establishments furnishing data reported 80,577 employees at January 1, 1937, as against 85,663 in the preceding month. Lumber, pulp and paper, food and non-ferrous metal factories, logging, construction and trade recorded curtailment, that in the lumber industries being most pronounced. Services, however, showed moderate improvement. The 981 establishments co-operating at January 1 of last year had employed 78,164 workers.

Index numbers of employment by economic areas are given in Table 1.

Employment by Cities

There were contractions in seven of the eight cities for which separate tabulations are made, firms in Montreal, Quebec City, Toronto, Ottawa, Hamilton, Winnipeg and Vancouver reporting reduced employment, while there was a considerable increase in Windsor.

Montreal.—The reduction in Montreal involved a much larger number of workers than that indicated at January 1, 1936, and was also greater than the average decline at that date in the years since 1920. Statements for the latest month were received from 1,367 establishments with 135,765 employees, as compared with 147,722 in the preceding month. Particularly marked curtailment was shown in construction, shipping and stevedoring and manufacturing; within the last-named,

Dec. 1	98·3	95·2	105·7	104·3	101·7	129·4	94·7	106·0
Jan. 1, 1937	90·4	92·0	103·4	102·8	99·0	137·1	92·4	105·3
Relative Weight of Employment by Cities as at Jan. 1, 1937	13·8	1·3	13·0	1·4	3·2	1·9	4·0	3·4

NOTE.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated city, to the total number of all employees reported in Canada by the firms making returns for the date under review.

the losses in food, textile, leather and musical instrument plants were greatest. Trade was also slacker. The index, at 90·4, was four points higher than at the beginning of January in 1936, when 1,293 firms had reported payrolls aggregating 129,755 persons, compared with 138,142 in the preceding month.

Quebec.—Transportation reported a considerable seasonal loss, and manufacturing and building construction also afforded less employment, while services, road construction and maintenance and trade showed some improvement; the 175 co-operating employers in Quebec City reduced their staffs from 12,711 persons at December 1, to 12,277 at the beginning of January. This decline was smaller than that noted at January 1 of last year, but the index was then slightly higher.

Toronto.—Toronto firms showed a decidedly larger seasonal contraction than at the same date in 1936, but this was smaller than the average loss recorded at the beginning of January in the years for which data are now available. The index, at 103·4, compared favourably with that of 100·6 at the opening of last year. There were important losses in manufacturing, the most noteworthy being in the textile, food, pulp and paper and leather groups; construction and transportation were also slacker, while retail stores reported pronounced improvement. Returns were tabulated from 1,517 employers with 128,362 workers, compared with 131,179 in their last report; at the same date of last year, 1,416 firms had employed 122,795 men and women, a decline of 402 from the preceding month.

Ottawa.—Manufacturing and construction registered seasonal curtailment; trade, on the other hand, was rather more active, while the remaining industries showed little general change. The result was a moderate decrease in general employment in the city, according to the 201 reporting establishments, whose staffs aggregated 13,619 persons, as compared with 13,822 in the preceding month. A reduction had also been recorded at the same date of last year, when the index was fractionally higher.

Hamilton.—Data were received from 290 firms in Hamilton employing 31,878 workers, as against 32,713 at December 1. Manufac-

Table III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES

(Average Calendar Year 1926=100)

—	All industries	Manufacturing	Logging	Mining	Communications	Transportation	Construction	Services	Trade
Jan. 1, 1921	88·8	84·8	159·9	104·9	90·5	95·1	63·1	78·9	99·6

Relative Weight of Employment by Industries as at Jan. 1, 1937	100·0	52·7	7·0	6·8	2·2	9·9	7·3	2·8	11·3

Note.—The "Relative Weight," as given just above, shows the proportion of employees in the indicated industry, to the total number of all employees reported in Canada by the firms making returns for the date under review.

turing, transportation and trade showed reduced activity, while the fluctuations in other industries were slight. The falling-off noted at January 1, 1936, involved the release of a much larger number of workers, and the index was a few points lower.

Windsor.—There was an important increase in the number employed in Windsor at January 1, 1937, this taking place almost wholly in manufacturing (notably in the automobile and related industries), while other industries showed little general change. Returns were compiled from 173 establishments with 18,719 persons in their employ, as compared with 17,647 in the preceding month. Activity was decidedly greater than at January 1, 1936, when a reduction had been reported.

Winnipeg.—Employment in manufacturing, building and trade declined in Winnipeg, while road work was more active, and other groups showed only slight changes. The 483 co-operating firms reported 39,703 employees, compared with 40,653 in the preceding month. This contraction involved a rather smaller number of workers than have been laid off, on the average, at January 1 in the last sixteen years, but was similar in size to the loss recorded at the same date in 1936. The index then was fractionally lower. Returns for January 1, 1936, had been tabulated from 454 employers of 39,284 persons.

Vancouver.—Reduced activity was indicated in Vancouver, according to returns from 438 employers of 33,899 persons, as compared with 34,155 at December 1. A larger decrease had occurred at the corresponding date of last year, when the index was several points lower. There were losses at January 1, 1937, in manufacturing, notably in the food and pulp and paper divisions, and construction and trade were also slacker than in the preceding month; on the other hand, transportation and services showed improvement.

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY MANUFACTURING INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative Weight	Jan. 1, 1937	Dec. 1, 1936	Jan. 1, 1936	Jan. 1, 1935	Jan. 1, 1934	Jan. 1, 1933	Jan. 1, 1932

[1]The "Relative Weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Index numbers by cities are given in Table 2.

Employment by Industries

Manufacturing.—As already stated, the recession in employment in manufacturing was substantially less than the average indicated at January 1 in the last sixteen years, 23,202 operatives having been released from the staffs of the co-operating establishments, as compared with an average loss of some 33,500 in the period, 1921-1936. The general reduction in manufacturing at January 1, 1937, was one of the smallest on record, only those at January 1 in 1935 and 1934 having involved fewer workers, while the greatest decrease yet indicated by the employers furnishing statistics was that of over 72,000 at the commencement of 1921. The contraction at the date under review, as in other years, was partly due to comparatively brief shutdowns for inventory and over the holiday season. In each of the sixteen years for which data are now available, employment has shown partial recovery in the weeks succeeding January 1; on the average, this has amounted, up to the date of the next report (viz., February 1), to some 51 p.c. of the recession noted at the opening of the year.

The manufacturers making returns for January 1, 1937, numbered 5,828, and their payrolls aggregated 519,136, compared with 542,338 at December 1. The index declined from 107·0 in the preceding month to 102·4 at the date under review, but as compared with 96·8 at January 1, 1936, showed an improvement of 5·8 p.c. in the year. After adjustment for seasonal influences, the index at the latest date was 110·9, or 2·8 points higher than at December 1.

The most extensive reductions at the date under review were in food, textile, lumber, leather and pulp and paper factories, but the fur, musical instrument, rubber, chemical, clay, glass and stone, electric light and power, electrical apparatus, non-metallic mineral and miscellaneous manufacturing industries also recorded important curtailment. On the other hand, iron and steel, non-ferrous metal and tobacco and beverage works showed improvement, unusual at the beginning of January in the experience of the years since 1920. Activity in most classes of manufacturing was greater than at January 1, 1936.

The index numbers of factory employment at January 1 in the years for which statistics are available are as follows:—1937, 102·4; 1936, 96·8; 1935, 87·4; 1934, 80·0; 1933, 74·4; 1932, 83·9; 1931, 93·7; 1930, 106·5; 1929, 107·3; 1928, 97·9; 1927, 94·7; 1926, 90·0; 1925, 81·7; 1924, 86·7; 1923, 84·5; 1922, 74·4 and 1921, 84·8.

The 5,551 manufacturers making returns for the beginning of January, 1936, had employed 487,147 men and women, a decline of 23,330 or 4·6 p.c. from the preceding month.

Animal Products.—Edible.—Large reductions were reported in all branches of this division,—dairies, meat-packing and fish-preserving plants. Statements were received from 286 manufacturers with 23,447 workers, as compared with 24,758 at the beginning of December. This loss was larger than that recorded at January 1, 1936, but the index number was then considerably lower. All five economic areas reported reduced employment, the heaviest contractions being in the Maritime and Prairie Provinces.

Leather Products.—There was a seasonal decline in the leather industries at the beginning of January, particularly in boot and shoe factories. The shrinkage involved a rather greater number of employees than that noted at the corresponding date last year; the index, then, however, was slightly lower. A combined working force of 19,896 persons was registered by the 300 firms making returns, as compared with 21,502 in the preceding month. Most of the loss occurred in Quebec and Ontario.

Lumber Products.—Seasonal contractions were noted in lumber mills, 852 of which reduced their payrolls from 41,187 at December 1 to 37,512 workers at the beginning of January. Employment was in decidedly larger volume than at the corresponding date of last year. Sawmills registered the most pronounced decreases, but there was also curtailment in furniture, vehicle, container and other wood-using industries. There were especially marked reductions in Quebec and Ontario, although employment generally declined.

Musical Instruments.—Thirty-five manufacturers of musical instruments reported a combined staff of 989, a number considerably less than in the preceding month. No general change had been noted at January 1 a year ago, and the index number then was much higher.

Plant Products.—Edible.—There were seasonal reductions in employment in practically all branches of the vegetable food group, the greatest being in canning, sugar and syrup, bakery, chocolate and confectionery factories. The working forces of the 482 co-operating employers totalled 29,598 persons, as compared with 35,725 in their last report. The contractions in Ontario were most pronounced; the movement, however, was generally unfavourable. The declines noted at the beginning of January last year were decidedly smaller, but the index number then was some four points lower than at the date under review.

Pulp and Paper Products.—The shrinkage at the beginning of January, 1937, was greater than that noted at the same date in 1936, but employment was then in smaller volume. Statistics were received from 606 firms, whose staffs aggregated 62,055 workers, or 2,236 fewer than in their last report. There were considerable losses in Quebec and Ontario. Pulp and paper mills reported a large share of the reduction, but there were also declines in plants producing paper goods and in printing and publishing houses.

Rubber Products.—Rubber factories showed a decrease, which was smaller than that noted at January 1, 1936; 53 plants had 12,214 employees at the date under review, as against 12,898 at the beginning of December. Most of the loss took place in Ontario. The index number, at 95·8, compared favourably with that of 92·0 at the same date of last year.

Textile Products.—The 1,048 textile firms furnishing data released a larger proportion of their total operatives than was the case among the establishments making returns at the beginning of January, 1936; the index then was slightly lower than at the date under review, when it stood at 114·6. The reported payrolls included 98,629 persons at January 1, 1937, as against 103,975 in the last report. Quebec and Ontario recorded the bulk of the shrinkage, which was especially marked in the hosiery and knit goods and garment and personal furnishing divisions.

Tobacco, Distilled and Malt Liquors.—There was an increase in employment at the beginning of January in the tobacco group, while beverage and other classes under this heading showed little change, on the whole. Statements were tabulated from 187 manufacturers in this group, employing 18,938 workers, or 613 more than at December 1. Most of the advance took place in Ontario.

Chemical Products.—Employment in chemical and allied products showed a contraction at January 1 as compared with the preceding month, 159 persons having been released from the labour forces of the 200 reporting plants, which had 11,647 employees. Larger declines were noted at the corresponding date a year ago, and the index number then was much lower.

Clay, Glass and Stone Products.—Further seasonal recessions in employment occurred in the production of these goods; 204 works reported an aggregate staff of 8,332, as compared with 9,070 in the preceding month. All provinces shared in this curtailment, which, however, was most marked in Quebec and Ontario. Brick and stone yards recorded important declines; on the whole, these were on a smaller scale than those of January 1, 1936, when employment was generally in less volume.

Electric Light and Power.—Employment in electric current plants again declined, according to statistics from 96 producers, employing 14,342 workers, or 504 fewer than at December 1. Ontario firms reported the greatest curtailment. A rather larger reduction had been noted at the beginning of January of last year, when the index was slightly lower.

Electrical Apparatus.—A decline in personnel was registered by the 126 co-operating electrical apparatus factories, whose labour forces aggregated 16,812 persons at January 1, as compared with 17,187 in the preceding month. Employment was rather more active than at the same date of 1936, when the falling-off had been somewhat greater.

Iron and Steel Products.—Agricultural implement, automobile and structural iron and steel works showed improvement, while heating appliance plants reported curtailment. The payrolls of the 862 firms furnishing data in the iron and steel industry totalled 120,169, against 120,012 at December 1. This general advance, though not large, is interesting because it is contra-seasonal. Most of the gain occurred in Ontario. The iron and steel index was higher than at January 1 in any other year since 1930.

Non-Ferrous Metal Products.—There was an increase in non-ferrous metal products, comparing favourably with the loss indicated at the same date in 1936, when the index was many points lower. Returns were compiled from 170 employers of 22,717 persons, as against 22,388 at the commencement of December. Improvement was recorded in Quebec and Ontario, while the tendency in British Columbia was downward. An analysis of the data by industries shows heightened activity in smelters and refineries and in aluminum works, while a decline was indicated in the precious metals group.

Mineral Products.—Decreased activity was noted in this group, in which a similar loss had occurred at the beginning of last year. A combined working force of 13,999 persons was employed by the 142 establishments whose returns were received, and who had 14,335 employees at December 1. The index was higher than at January 1, 1936, standing at 139·2 at the latest date, as against 134·6 in the same month of last year.

Logging

Bush operations on the whole, showed a considerable falling-off at January 1. The experience of the years since 1920 shows that there is customarily an exodus from logging camps over the holiday season, but the general movement in the present year was more pronounced than usual. Improvement was shown in Ontario and the Prairie Provinces, while elsewhere large declines were noted. Employment was more active than in January of any other year since 1920; the index stood at 242·1, compared with 265·7 at December 1, 1936, and 183·4 at January 1, 1936. A combined working force of 69,091 was reported by the 362 co-operating firms, who had 75,655 in the preceding month.

Mining

Coal.—Heightened activity was indicated in coal mines, 104 of which enlarged their payrolls from 26,013 persons at December 1, to 26,277 at the beginning of January. There were moderate gains in both eastern and western coal-fields. The index number at January 1, 1936, was slightly lower; employment had then shown a similar advance over the preceding month.

Metallic Ores.—A pronounced decrease was noted in metallic ore mines, according to data from 217 mines employing 33,040 persons at the beginning of January, as compared with 34,651 in the last report. The index was decidedly higher than at the same date of last year, although a smaller loss had then occurred.

Non-Metallic Minerals (Other than Coal).—The trend of employment in this division continued seasonally downward; the reductions were on a larger scale than at January 1 a year ago, but the index was then some fifteen point lower. Statements were received from 84 employers with 7,890 workers, as compared with 8,708 in the preceding month. The most extensive declines were in Ontario and the Maritime Provinces.

Communications

Further losses took place on telephones and telegraphs; the situation was slightly better than at the same date in 1936, when larger decreases had been noted. The payrolls of the companies and branches furnishing data declined from 21,646 at December 1 to 21,363 employees at the beginning of January.

Transportation

Street Railways and Cartage.—Local transportation firms reported a seasonal contraction in personnel, involving much the same number of workers as that noted at January 1, 1936, when the index number was lower by 4½ points. A combined staff of 26,167 persons was employed by the 236 co-operating firms, who had 26,927 workers in the preceding month. The largest reductions were in Quebec.

Steam Railways.—Employment in steam railway operation showed a pronounced recession, improvement in the Maritime Provinces being more than offset by contractions elsewhere. The payrolls of the 101 companies and divisional superintendents furnishing returns aggregated 58,116 persons, as against 59,700 in their last report. A smaller decline had been recorded at the same date last year, but the index was slightly lower than that of 73·1 at January 1, 1937.

Shipping and Stevedoring.—There was a large seasonal reduction in employment in water transportation, chiefly in Quebec and Ontario, while an important increase, also seasonal in character, was noted in the Maritime Provinces. The curtailment was not so extensive as that indicated at January 1, 1936, when the index was decidedly lower. Returns for the date under review were compiled from 110 employers of 13,404 men, compared with 17,176 in the preceding month.

Construction and Maintenance

Building.—Continued seasonal curtailment of operations was shown in building construction; 734 contractors reduced their staffs from 21,145 at the beginning of December to 16,206 at January 1. The most pronounced declines were in Quebec and Ontario, although there were losses in all five economic areas. Smaller decreases had been indicated at January 1 last year, and the index was then over sixteen points higher.

Highway.—Statements were received from 335 firms employing 34,891 workers, or 14,892 fewer than at December 1. Important curtailment took place in all provinces. Road construction generally afforded less employment than in the winter of 1935-1936.

Railway.—A downward movement was shown in this division, in which 37 employers reported 21,233 persons on their payroll, as compared with 23,736 in the preceding month. The index was slightly higher than at January 1 of a year ago, when a smaller reduction had been noted. Ontario recorded the most pronounced decreases at the date under review.

Services

Improvement occurred in services, in which 471 firms employed 27,191 persons, or 555 more

than in the preceding month. There was an increase in hotels and restaurants, while the fluctuations in the other divisions of the group were slight. An advance has also been made at the beginning of January, 1936, when the index was several points lower.

Trade

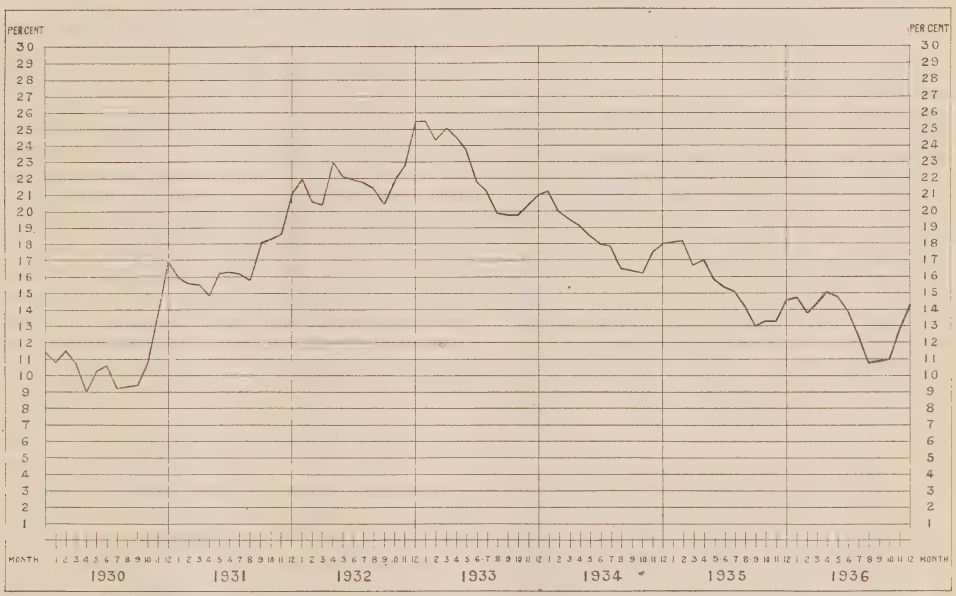
Trade afforded considerably more employment than at December 1; the increase in personnel, on the whole, exceeded the average gain indicated at the beginning of January in the preceding years for which statistics are available. There were moderate seasonal losses in wholesale establishments, but the additions to staffs in retail stores were larger. The 1,329 co-operating employers had 111,073 persons on their staffs, compared with 110,297 in their last report. The index stood at 136·9, as compared with 136·0 in the preceding month, and 135·9 at January 1, 1936.

Tables

The accompanying tables give index numbers of employment by economic areas, leading cities and industries. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns at the date indicated.

(2) Unemployment in Trade Unions at the Close of December, 1936

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are occupied at work other than their own trades or who are idle due to illness are not considered as unemployed, while unions which are involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.



The lull in business activity usually evident toward the close of the year, owing to the holiday season with following stock-taking and inventory periods, was mainly responsible for the falling off in activity apparent among local trade union members at the close of December, 1936, from the preceding month. Reporting for December were 1,816 labour organizations involving a membership of 186,163 persons, 26,546 of whom were without work on the last day of the month, a percentage of 14·3 contrasted with 12·7 per cent in November. There was little variation in the level of employment from December, 1935, when 14·6 per cent of idleness was recorded. Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and British Columbia unions all participated in the less favourable movement noted from November though the changes were not of particular significance in any one province, ranging from 2·2 per cent in Saskatchewan to 0·9 per cent in Manitoba. New Brunswick unions, on the contrary, indicated a slight rise in work afforded, and in Alberta, conditions were but nominally better than in November. Contrasted with the returns for December, 1935, Alberta and British Columbia members showed improvement of moderate degree during the month reviewed, and in Manitoba, New Brunswick and Nova Scotia also, some employment advancement was reflected. Minor contractions in activity were evident among Saskatchewan members and in Quebec and Ontario employment was but fractionally retarded.

A separate compilation is made each month of unemployment among local trade union members in the largest city in each province with the exception of Prince Edward Island. There was a rather noteworthy drop in available work among Montreal and Toronto members during December from the previous month, and in Winnipeg, Regina and Halifax the trend was also toward lessened activity though the changes were very slight. Saint John and Edmonton unions, however, reported a somewhat greater volume of employment. In Vancouver the same situation obtained as in November. When making a comparison with the returns for December, 1935, appreciable betterment in conditions was reflected by Halifax, Saint John and Vancouver members during the period under survey, and in Winnipeg, Edmonton and Montreal also, some employment expansion was evident. Toronto members, on the other hand, indicated moderate recessions in activity, while in Regina contractions of minor importance were recorded.

Accompanying this article is a chart which illustrates the trend of unemployment by months from January, 1930, to date. The curve during 1936 has traced a more favourable course than in any year since 1931, improvement in the situation being shown each month over the corresponding months of the intervening years. The best situation for the year obtained in August when 10·8

per cent of inactivity was recorded, this percentage being the smallest registered in any month of our records since October, 1930, when the same percentage of idleness was manifest. The percentage of 15·1 established in April constituted the unemployment peak for the year. The curve at the close of January, 1936, showed little change in level from the previous month though the tendency was toward retarded activity. In February the curve extended slightly downward, an evidence of somewhat improved conditions, but this favourable movement was not maintained, the March trend again being upward and continuing in this direction until the close of April. During May, nominal gains

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

in available work were reflected by the slight drop in level of the curve and this better tendency was sustained and gradually extended until the close of August. In September and October the variations from August were so slight as to be almost negligible. The customary curtailment of activity evident toward the closing months of the year, and due largely to seasonal causes, was again apparent throughout both November and December though the changes were not particularly marked.

Returns were tabulated for December from 502 local unions in the manufacturing industries with an aggregate of 63,376 members, 10,631 or 16·8 per cent of whom were without employment on the last day of the month contrasted with a percentage of 15·6 in November. Recessions involving the greatest number of members were reported in the garment trades particularly in the province of Quebec, though viewed from a percentage basis the most outstanding curtailment of activity was evident among fur and glass workers, metal polishers and general labourers. Wood workers showed but a fractional drop in employment. The iron and steel trades maintained a practically unchanged situation from November. Unemployment for leather workers, however, eased off considerably, and among hat, cap and glove, jewellery, brewery, and cigar and tobacco workers, and bakers and confectioners a somewhat greater volume of work was available. Conditions for paper makers, printing tradesmen, and textile and carpet workers were but nominally improved. Contrasted with the returns in the manufacturing industries for December, 1935, when 15·1 per cent of idleness was recorded, the situation was, as in the previous comparison, decidedly less active for garment, hat, cap and glove, and glass workers, and general labourers during the month reviewed, and small contractions in employment were manifest by leather, wood and jewellery workers, and metal polishers. Fur workers, on the contrary, were much more actively engaged than in December, 1935, and among bakers

and confectioners, and textile and carpet workers, noteworthy advancement was apparent. The printing, and iron and steel trades, cigar and tobacco, and brewery workers, and the pulp and paper industry also reflected an upward movement of employment from December a year ago.

The situation in coal mining during December remained much the same as in the preceding month, what slight variation was shown tending favourably. This was evident from reports received from 49 unions of these workers including a membership of 16,617 persons, 818 or a percentage of 4·9 of whom were idle at the close of the month in comparison with 5·0 per cent in November. Employment expansion on a small scale, was registered from December, 1935, unemployment for that month standing at 6·3 per cent. In the Alberta areas slightly better volume of work was available than in November, and in British Columbia the trend was toward heightened activity though the change was merely nominal. This more favourable movement shown in the western coal fields was, however, almost offset by the small recessions evident in Nova Scotia. Improvement in the Alberta mines of nearly 4 per cent was recorded from December, 1935, while in Nova Scotia gains of less than one per cent were manifest. Activity in British Columbia was but very slightly retarded.

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Prince Edward Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919.....	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Dec. 1936.....	6·8	6·2	20·9	13·8	10·9	12·8	6·4	12·7	14·3

The building and construction trades were seasonally slacker during December, unemployment standing at 40·0 per cent as compared with a percentage of 34·1 in November. Activity has been tending downward among these tradesmen since the beginning of September, the usual slowing up of employment with the fall and winter seasons being in evidence to a small degree, in each month until December when more extensive curtailment was recorded. The percentage for the month reviewed was based on the returns compiled from 205 associations of building tradesmen with 18,905 members, 7,560 of whom were unemployed on the last day of the month. Conditions, however, were not so depressed as in December, 1935, when the percentage of idleness stood at 45·1. Carpenters and joiners suffered severe losses in employment when compared with November, and were a large factor in the unfavourable situation noted in the building trades as a whole, though contributing declines on a noteworthy scale were recorded by bricklayers, masons and plasterers. Steam shovelmen, and tile layers, lathers and roofers showed outstanding percentage contractions which, as their membership was small, affected few persons. Among hod-carriers and building labourers, and plumbers and steamfitters some curtailment of activity was noted. Granite and stone cutters, and bridge and structural iron workers, on the contrary, were substantially better engaged than in November while fractional improvement only, was apparent among electrical workers, and painters and decorators and paper hangers. When compared with the returns for December, 1935, marked employment expansion was manifest by steam shovelmen, bridge and structural iron workers, bricklayers, masons

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and Logging	Mining	Manufacturing Industries	Vegetable products	Pulp and paper products	Pulp and paper mill workers	Printing, publishing and lithographing	Electric current	Wood products	Fibres, textiles and textile products	Textile and carpet workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Government	Miscellaneous	All occupations

and plasterers, carpenters and joiners, granite and stone cutters, and plumbers and steamfitters, and moderate gains were recorded by electrical workers. A pronounced falling off in employment, however, was registered by tile layers, lathers and roofers from December a year ago, and among hod-carriers and building labourers noteworthy recessions were apparent. The tendency for painters, decorators and paper hangers was also less favourable though the variation from December, 1935, was very slight.

There was some lowering in the employment volume available to workers in the transportation industries during December from the previous month, the 812 associations making returns with a total of 59,200 members showing that 5,108 or a percentage of 8·6 were unemployed on the last day of the month as contrasted with 6·6 per cent in November.

Steam railway employees, whose returns constituted over 79 per cent of the entire group membership reported, were less actively engaged than in November, the declines being particularly noticeable among railway and steamship clerks and due to the closing of navigation on the Great Lakes. Quieter conditions also prevailed in the navigation division, as a whole, from November. Among street and electric railway employees, and teamsters and chauffeurs, however, the tendency was toward a greater volume of employment though the changes were quite slight. Conditions in the transportation industries remained substantially unchanged from December, 1935, when 8·7 per cent of unemployment was reported, the navigation division showing employment recessions of rather noteworthy proportions, and street and electric railway employees but a nominal adverse tendency. Among steam railway employees, and teamsters and chauffeurs the variations from December, 1935, were slight, though favourable, and combined, were just sufficient to effect a favourable balance for the transportation industries, as a whole.

Retail shop clerks during December reported the same percentage of idleness as in November, namely 4·7 per cent. This percentage was slightly in excess of that indicated for December, 1935, when 3·7 per cent of the members reported were without work. For the month reviewed 4 associations made returns to the Department involving a membership of 1,441 persons.

From civic employees 78 reports were forwarded during December embracing a membership of 8,500 persons, 131 or 1·5 per cent of whom were unemployed on the last day of the month contrasted with percentages of 1·4 in November and 3·2 in December, 1935.

The trend of activity in the miscellaneous group of trades during December was slightly upward from both the preceding month and December, 1935, unemployment standing at 9·4 per cent in comparison with 10·3 per cent in November and 10·4 per cent in December a year ago. The percentage for the month reviewed was established from the reports received from 130 associations with 6,876 members, 644 of whom were without work on the last day of the month. Hotel and restaurant employees were afforded a better volume of work than in either the preceding month or December, 1935, the improvement in the latter comparison being quite pronounced, and among barbers and unclassified workers, the tendency was also more favourable in both comparisons though the changes were small. Theatre and stage employees showed a slight slowing up in available work from November and the contractions evident from December, 1935, were but fractional. Among stationary engineers and firemen there was little variation in conditions from November though the trend was unfavourable, and moderate losses in activity were manifest from December a year ago.

The 3 unions in the fishing industry forwarding reports for December and embracing 570 members indicated that 210 were unemployed on the last day of the month, a percentage of 36·8 in contrast with percentages of 38·8 in November and 35·9 in December, 1935.

A slight tendency toward retarded employment was apparent among lumber workers and loggers during December from the preceding month though the situation showed considerable improvement from December, 1935. This was evident from the returns compiled from 2 associations with a membership covering 1,466 persons, 2·3 per cent of whom were without work at the end of the month compared with 2·1 per cent of inactivity in November and 15·1 per cent in December a year ago.

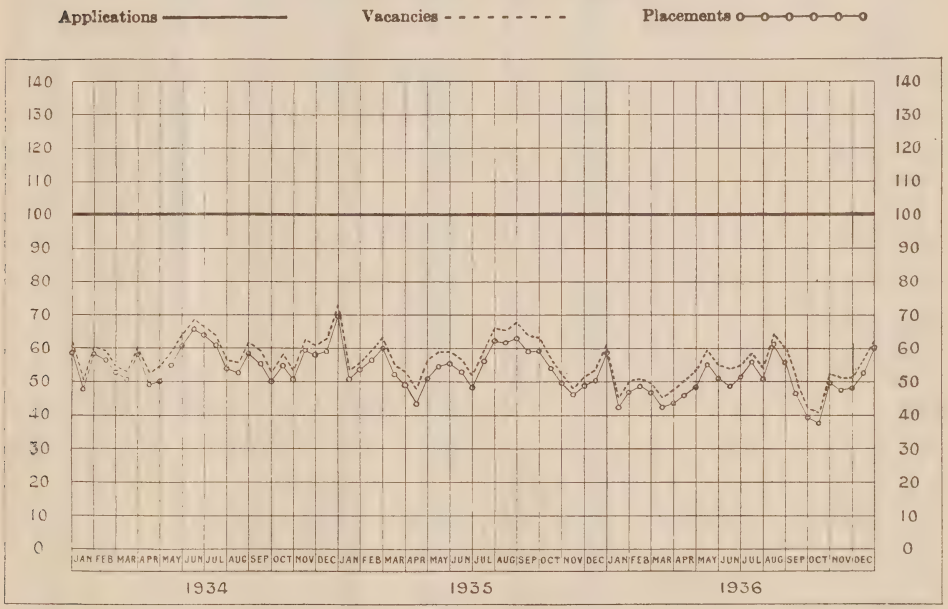

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1936 inclusive, and also the percentages of unemployment by provinces for December of each year from 1919 to 1933 inclusive, and for each month from December, 1934, to date. Table II summarizes the returns in the various groups of industries for the same months as in Table I.

(3) Employment Office Reports for December, 1936

The volume of business transacted by offices of the Employment Service of Canada during the month of December, 1936, showed a decline of nearly 8 per cent in the average daily placements when compared with those of the preceding month, although total placements were somewhat higher, as there were two more working days in December than in November. When compared with December, 1935, an increase of over 7 per cent in the average daily placements was recorded, the total for the month under review also being higher. Industrial divisions showing gains over November were logging, services and mining, the remaining groups all registering declines, the highest of which were in construction and maintenance, farming and manufacturing. When a comparison was made with December, 1935, substantial increases were shown in farming, services and logging, with others of lesser magnitude in manufacturing and transportation. An appreciable decline occurred in construction and maintenance, but those in trade and mining were nominal only.

The accompanying chart shows the trend of employment since January, 1934, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be seen from the graph that the curves of vacancies and placements in relation to applications showed a marked upward trend throughout the month and at the close of the period both levels were slightly above those shown at the end of December, 1935. The ratio of vacancies to each 100 applications was 56·9 and 62·5 during the first and the second half of December, 1936, in comparison with ratios of 53·4 and 61·2 during the same periods of 1935. The ratios of placements to each 100 applications during the periods under review were 52·7 and 60·2, as compared with 50·2 and 58·3 during the corresponding month of 1935.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during December, 1936, was 1,281 as compared with 1,397 during the preceding month and with 1,189 in December a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,156, in comparison with 2,732 in November and 2,080 in December, 1935.

* 1,049 Placements effected by offices since closed.

The average number of placements made daily by offices of the Service during December, 1936, was 1,209, of which 890 were in regular employment and 319 in work of one week's duration or less, as compared with a total daily average of 1,307 during the preceding month. Placements in December a year ago averaged 1,126 daily, consisting of 735 placements in regular and 391 in casual employment.

During the month of December, 1936, the offices of the Service referred 32,212 persons to vacancies and effected a total of 31,411 placements. Of these, the placements in regular employment were 23,140, of which 18,683 were of men and 4,457 of women, while placements in casual employment totalled 8,271. The number of vacancies reported by employers was 23,756 for men and 9,528 for women, a total of 33,284, while applications for work numbered 56,051, of which 44,414 were from men and 11,637 from women. Reports for November, 1936, showed 33,522 positions available, 65,556 applications made and 31,347 placements effected, while in December, 1935, there were recorded 29,713 vacancies, 51,983 applications for work, and 28,144 placements in regular and casual employment.

During the year 1936, the offices of the Service throughout Canada reported 355,376 vacancies, 680,053 applications, and 331,450 placements in regular and casual employment, a decline of over 6 per cent from the placements effected during the preceding year, 1935.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1926, to date:—

Year:	Placements		
	Regular	Casual	Totals
1926..	300,226	109,929	410,155
1927..	302,723	112,046	414,769
1928..	334,604	135,724	470,328
1929..	260,747	137,620	398,367
1930..	187,872	180,807	368,679
1931..	175,632	295,876	471,508
1932..	153,771	198,443	352,214
1933..	170,576	181,521	352,097
1934..	223,564	182,527	406,091
1935..	226,345	127,457	353,802
1936..	217,931	113,519	331,450

NOVA SCOTIA

Employment opportunities, as indicated by orders received at Employment Offices in Nova Scotia during December, were nearly 13 per cent less favourable than in the preceding month and 7 per cent below the corresponding month of 1935. There was a decrease also in placements of nearly 15 per cent when compared with November and nearly 9 per cent in comparison with December a year ago. The decrease in placements from December, 1935, was due to a decline under construction and maintenance, although a small loss was also reported in logging. An increase in services was the only other change of importance. Placements by industrial divisions included: logging, 36; construction and maintenance, 312; and services, 372, of which 254 were of household workers. During the month 75 men and 84 women were placed in regular employment.

NEW BRUNSWICK

During the month of December positions offered through Employment Offices in New Brunswick were over 13 per cent higher than in the preceding month, but over 22 per cent below the corresponding month of 1935. There was an increase in placements of over 12 per cent when compared with November, but a decline of 22 per cent in comparison with December a year ago. The only decrease of importance in placements from December, 1935, was in construction and maintenance and accounted for the loss under this comparison, as a moderate decline in services was offset by small gains in logging, manufacturing, trade and mining. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 21; logging, 27; construction and maintenance, 52; and services, 484, of which 409 were of household workers. Placements in regular employment numbered 91 of men and 80 of women.

QUEBEC

There was a decline of nearly 12 per cent in the number of positions offered through Employment Offices in the Province of Quebec during December when compared with the preceding month, but a gain of over 82 per cent in comparison with the corresponding month of the previous year. Placements were over 11 per cent less than in November, but nearly 93 per cent above December, 1935. The substantial increase over December a year ago was almost entirely due to relief work on roads, sewers and similar projects. Placements were also higher in services, farming and manufacturing. There was a large reduction in logging, but this was the only group in which a decrease was reported. Placements by industrial divisions included: manufacturing, 123; logging, 512; farming, 70; construction and maintenance, 5,220; trade, 101; and services, 1,995, of which 1,812 were of house-

hold workers. There were 5,986 men and 1,251 women placed in regular employment during the month.

ONTARIO

The demand for workers, as indicated by orders received at Employment Offices in Ontario during December, was over 6 per cent less than in the preceding month and 10 per cent below the corresponding month of 1935. Placements also declined nearly 5 per cent when compared with November and over 10 per cent in comparison with December of the previous year. When comparing placements by industrial divisions during the month under review with December, 1935, construction and maintenance showed the only decrease of importance and logging the largest increase. Smaller gains were also reported in services and manufacturing, but trade showed a decrease. Improvement, although small, was reported in all other groups. Placements by industrial divisions included: manufacturing, 487; logging, 1,603; farming, 359; construction and maintenance, 1,542; trade, 229; and services, 3,935, of which 2,116 were of household workers. Placements in regular employment numbered 3,271 of men and 1,092 of women.

MANITOBA

Orders received at Employment Offices in Manitoba during December called for nearly 86 per cent more workers than in the preceding month and over 24 per cent more than during the corresponding month of 1935. The placements also were over 82 per cent higher than in November and nearly 24 per cent above December a year ago. The large increase in farm placements under the Farm Relief Plan was responsible for the gain over December, 1935. Placements in services and logging were also higher. The only decline of importance was in construction and maintenance, due to a reduction in relief placements. Industrial divisions in which most of the placements were effected during the month were: logging, 272; farming, 3,916; construction and maintenance, 137; and services, 1,041, of which 994 were of household workers. There were 4,322 men and 801 women placed in regular employment during the month.

SASKATCHEWAN

During December, 1936, Employment Offices in Saskatchewan received orders for nearly 32 per cent fewer workers than in the preceding month, but nearly 7 per cent above the corresponding month of the previous year. Placements were nearly 30 per cent less than in November, but 6 per cent above December, 1935. Placements in services and logging were higher than during December of the previous year and accounted for the increase under this comparison. These gains, however, were partly offset by a reduction in farming and small losses in construction and maintenance and manufacturing. Placements by industrial divisions included manufacturing, 41; logging, 137; farming, 1,980; construction and maintenance, 45; and services, 917, of which 795 were of household workers. During the month 2,084 men and 670 women were placed in regular employment.

ALBERTA

Opportunities for employment, as indicated by orders received at Employment Offices in Alberta during December, were over 5 per cent less favourable than in the preceding month and 13 per cent below the corresponding month of the previous year. There was a decrease also in placements of over 14 per cent when compared with November and of 19 per cent in comparison with December, 1935. When comparing placements by industrial groups with the corresponding month of 1935, the largest increases were in farming and logging, but were insufficient to offset a substantial decline in construction and maintenance. While improvement was indicated in nearly all other groups, none of the changes was large. Industrial divisions in which most of the placements were effected during the month were: logging, 236; farming, 1,222; construction and maintenance, 247; and services, 393, of which 309 were of household workers. Placements in regular employment numbered 1,754 men and 243 women.

BRITISH COLUMBIA

The demand for workers, as indicated by orders received at Employment Offices in British Columbia during December, was nearly 41 per cent greater than in the preceding month, but over 3 per cent less than during the corresponding month of December, 1935. Similar percentages of change were reported in placements under both comparisons. Except for a large reduction in relief placements under construction and maintenance and a small loss in manufacturing, all industrial groups showed improvement over December, 1935. The largest gains were in logging and services. Placements by industrial divisions included logging, 633; farming, 91; construction and maintenance,

1,120; trade, 82; and services, 876, of which 564 were of household workers. There were 1,100 men and 236 women placed in regular employment during the month.

Movement of Labour

During the month of December, 1936, the offices of the Employment Service of Canada made 23,140 placements in regular employment, 13,152 of which were of persons for whom the employment found was outside the immediate vicinity of the offices at which they were registered. Of the latter, 858 were granted the Employment Service reduced transportation rate, 810 going to centres within the same province as the despatching office and 48 to other provinces. The reduced transportation rate, which is 2·5 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the offices of the Employment Service who may wish to travel to employment at a distance for which no workers are available locally.

The labour movement from Quebec centres during December was of bushmen, numbering 19, of whom 18 were shipped by the Rouyn office to Timmins and one by the Hull office to Pembroke. Ontario offices granted 624 certificates for reduced transportation during December to workers travelling to provincial situations. For centres within their respective zones, the Port Arthur office despatched 375 bush workers, 3 mine workers, 3 building carpenters, 3 hotel workers, and 2 restaurant cooks. The Fort William office 133 bush workers and one mine cookee, and the Sudbury office 25 bush workers. Destined to the Sudbury zone, in addition, were 6 bush men carried from Toronto. The Sault Ste. Marie zone received 69 bush men, 39 from North Bay, 28 from Sudbury and 2 from Toronto. Proceeding from Windsor, 4 automobile workers were bound for St. Catharines. In Manitoba, 68 workers took advantage of the Employment Service reduced transportation rate during December, 39 of whom went to provincial employment and 29 outside the province. These all travelled on certificates secured at the Winnipeg office. Within the province the movement was to centres in the Winnipeg zone and comprised the transfer of 26 bush men, 7 highway construction workers, 2 mine workers, 2 tractor operators, one farm hand and one labourer. Of the persons going outside the province, the Port Arthur zone was the destination of 26 bush workers and 2 mine labourers, while the one remaining was a farm hand, bound for the Yorkton zone. Transfers from Saskatchewan centres, during December, numbered 49 and were entirely of bush men proceeding to employment within the province. Of these, 44 journeyed to employment in the Prince Albert zone, the Saskatoon office effecting the transfer of 15 and the Prince Albert office of 29. The balance of this provincial movement was to the Yorkton zone, the Yorkton city office despatching 4 bush men and the Regina office one bush man. Reduced rates certificates granted in Alberta, during December, totalled 95, all provincial. These were issued at the Edmonton office to 73 bush workers, 6 sawmill workers, 6 labourers, 4 fishermen, 2 mine workers, 2 maids, one farm hand and one farm housekeeper journeying to various sections of the Edmonton zone. Profiting by the Employment Service reduced transportation rate in British Columbia, during December, 2 mine workers and one farm hand secured certificates at the Vancouver office, for transportation to employment within the same zone.

Of the 858 persons who travelled at the Employment Service reduced transportation rate, during December, 356 were carried by the Canadian National Railways, 494 by the Canadian Pacific Railway, 7 by the Northern Alberta Railway and one by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During December, 1936

The building permits issued by 58 cities in December, 1936, represented construction work valued at $3,225,274, as compared with $3,030,425 in November, 1936, and $2,401,856 in December, 1935. There was, therefore, an increase of $194,849 or 6·4 p.c. in December as compared with the preceding month, and of $823,418 or 34·3 p.c. in the more significant comparison with the same month in 1935.

The value of the building represented by the construction permits taken out during 1936 was $39,809,442; this was lower than the aggregate of $46,560,623 reported in 1935, although it was decidedly higher than in either 1934 or 1933. The cumulative total for each of the last five years has been very much lower than in earlier years of the record; the wholesale prices of building materials since 1931 have also been decidedly lower than in any preceding year since 1920.

Detailed statements were received for December from some 50 cities, showing that they had issued some 165 permits for dwellings valued at almost $1,200,000 and 700 permits for other buildings at an estimated cost of more than $1,700,000. There were also four

permits taken out for engineering work at a cost of $35,400. During November the construction of some 280 dwellings and 1,400 other buildings was authorized; these were estimated to cost approximately $1,198,000 and $1,600,000, respectively.

As compared with the preceding month, Quebec, Ontario and Saskatchewan reported increases in the value of the building authorized, that of $256,877 or 40·2 p.c. in Quebec being greatest. Of the declines indicated in the remaining provinces, that of $55,777 in New Brunswick was most pronounced.

Nova Scotia, New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia recorded increases as compared with December, 1935, in the value of the building represented by the permits granted. In this comparison, Ontario reported the greatest gain of $599,542 or 52·6 p.c.

Of the four largest cities, Montreal and Toronto registered increases as compared with November, 1936, and also as compared with December, 1935, Vancouver reported a decline as compared with the preceding month, but a gain over the same month in 1935, while Winnipeg showed a reduction in the value of the building permits issued in each comparison. Of the smaller centres, Shawinigan Falls, Three Rivers, Chatham, Hamilton, Kingston, Owen Sound, Port Arthur, Sarnia, Riverside, St. Boniface, Moose Jaw, Regina, Saskatoon, Edmonton, Lethbridge, Prince Rupert and North Vancouver recorded increases as compared with November, 1936, and also with December, 1935.

Year	Value of permits issued in December	Value of permits issued in twelve months	Indexes of value of permits issued in twelve months (1926=100)	Average indexes of wholesale prices of building materials, twelve months (Average 1926=100)
	$	$

for the completed years; the 1936 figures are unrevised, while for preceding years the statistics are revised. (A revised statement for 1936 will be issued next month.) Index numbers, based upon the total value of the building authorized by these cities during 1926 as 100, are given below, as are the average index numbers of wholesale prices of building materials in the years 1920-36.

The unrevised statistics for 1936 indicate that last year's aggregate was 14·5 p.c. lower than in 1936, although it was higher than in either 1934 or 1933. With these exceptions, the 1936 total was lower than in any other year since 1920. The index number of wholesale prices of building materials, though slightly higher than in any of the years, 1931-1935, was considerably lower than in any other year since 1920.

The accompanying table gives the value of the building permits issued by 58 cities in November and December, 1936, and December, 1935. The 35 centres for which records are available since 1910 are marked thus "x".

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

Great Britain

The *British Ministry of Labour Gazette*, January, 1937, summarized the employment situation as follows:—

Employment in December showed little change, on the whole, as compared with the previous month. There was an improvement in employment between November 23 and December 14 in coal mining, iron and steel manufacture, the motor vehicle and aircraft industry, ship building and repairing, the cotton industry, tailoring, the distributive trades, and hotel, etc. service. There was a decline, however, in a number of industries, including building and contracting, agriculture, fishing, stone quarrying, and port transport service, in which outdoor employment on December 14 was interrupted by adverse weather conditions. There was also a seasonal decline in employment in the pottery, boot and shoe, and hosiery industries.

It is estimated that at December 14, 1936, the number of insured persons, aged 16-64, in employment in Great Britan, exclusive of agricultural workers, was approximately 11,132,000. This was 12,000 more than at November 23, 1936, and 503,000 more than at December 16, 1935. Statistics are not yet available which would enable satisfactory estimates to be made of the numbers of agricultural workers in employment.

Among insured workpeople, aged 16-64 (excluding agricultural workers), the percentage unemployed in Great Britain and Northern Ireland, at December 14, 1936 (including those temporarily stopped as well as those wholly unemployed), was 12·2, the same as at November 23, 1936, as compared with 14·1 at December 16, 1935. In Great Britain the percentage at December 14, was 11·9, the same as at November 23, as compared with 13·9 at December 16, 1935.

At December 14, 1936, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,365,035 wholly unemployed, 194,841 temporarily stopped, and 68,843 normally in casual employment, making a total of 1,628,719. This was 5,117 more than a month before, but 239,846 less than a year before. The total of 1,628,719 included 1,305,382 men, 40,949 boys, 241,771 women, and 40,617 girls. The numbers unemployed usually show a reduction in December: the increase this year was largely due to the effects of the bad weather conditions, referred to above, on outdoor employment. It may also, however, have been partly attributable to the provisions of the Unemployment Insurance (Agriculture) Act, under which benefit recently became payable to unemployed agricultural workers; the numbers of such workers recorded as unemployed rose in Great Britain by over 8,000 between November 23 and December 14.

The persons on the registers in Great Britain included 1,400,188 applicants for insurance benefit or unemployment allowances, 128,303 other insured persons (including insured juveniles under 16 years of age), and 100,228 uninsured persons. Of the 1,400,188 applicants for benefit or allowances, 744,437 had claims admitted for insurance benefit and 578,987 had applications authorized for allowances at December 14, the balance of 76,764 included 43,850 persons whose position under the conditions relating to contributions paid and benefit received had not been determined, 8,167 persons who had been disqualified for short periods from receiving benefit, and 24,747 persons whose needs had been held not to justify payment of unemployment allowances.

In Great Britain and Northern Ireland the total number of persons on the registers of

Employment Exchanges at December 14, 1936, was 1,702,673, as compared with 1,693,945 at November 23, 1936, and 1,932,839 at December 16, 1935.

United States

The upswing in employment which has been evidenced each month since February, 1936, in the combined manufacturing and non-manufacturing industries surveyed by the United States Bureau of Labor Statistics continued through December, Secretary of Labor Frances Perkins announced. "Approximately 470,000 additional workers found employment in these combined industries between November and December, and aggregate weekly payrolls rose by over $14,100,000," she said.

A comparison of employment shows a gain in the combined groups of more than 1,340,000 workers between December, 1935, and December, 1936. Weekly payrolls in December, 1936, were nearly $53,000,000 greater than in the corresponding month of 1935.

Approximately 86,000 factory wage earners were returned to jobs in December. This increase is particularly noteworthy as factory employment usually declines from November to December, decreases having been shown in 13 of the preceding 17 years for which data are available. The December increase continues the unbroken succession of factory employment gains which have been reported each month since January, 1936.

Increases in factory payrolls from November to December have been recorded in 9 of the preceding 17 years. The current gain of 4·5 per cent, however, has been exceeded in only three instances. This pronounced increase in payrolls is due in part to the numerous wage-rate increases received by factory workers between the November 15 and December 15 pay periods. The estimated number of factory wage earners employed in December (8,187,000) exceeds that of any month since December, 1929, and total weekly payrolls in December ($192,400,000) is the maximum recorded since May, 1930. Average employment for the 12 months of 1936 was 6·8 per cent above the 1935 average. Factory payrolls for the year 1936 were 15·4 per cent above the 1935 average.

Durable Goods Industries.—In the durable goods industries, employment increased 1·5 per cent from November to December, the December, 1936, employment index (92·0) reaching the highest point since April, 1930, and indicating the employment of 920 workers in December for every 1,000 employed during the index-base year (1923-25=100). The increase of 0·7 per cent in employment in the non-durable goods group raised the December index to 103·9, which, with the exceptions of September and October, 1936, is the highest monthly level reached since November, 1929. In the non-durable goods group, 1,039 workers were employed in December for every 1,000 working during the index-base period.

Non-Manufacturing Industries.—Eight of the 16 non-manufacturing industries surveyed reported gains in employment between November and December. The largest gain (approximately 380,000) was a seasonal expansion in retail trade, due primarily to the employment of extra workers to handle the holiday trade. In the general merchandising group, which is composed of department, variety, and general merchandising stores and mail-order houses, employment increased 32·5 per cent or by nearly 295,000 workers. The level of employment in this group in December, 1936, exceeded the December, 1929, level by 11·2 per cent. In "other retail trade" establishments employment increased 3·4 per cent over the month interval or by nearly 87,000 workers.

Reports received from wholesale trade firms indicate a net gain in employment of 1·7 per cent or approximately 24,000 workers over the month interval. The increase was shared by most of the branches of wholesale distribution.

Seasonal demands resulted in increased employment of nearly 12,000 workers in the anthracite and bituminous coal mining industries. The gain in employment in the anthracite mining was accompanied by a rise of 37·7 per cent in weekly payrolls. Laundries, metal mines, insurance, and brokerage offices also reported larger numbers of workers in December than in the preceding month.

Among the 8 non-manufacturing industries reporting decreased employment from November to December, seasonal recessions were shown in private building construction (8·3 per cent), quarrying and non-metallic mining (6·6 per cent), dyeing and cleaning (4·4 per cent), and year-round hotels (1·1 per cent). The remaining four industries (telephone and telegraph, electric light and power and manufactured gas, electric railroad and motor-bus operations and maintenance, and crude petroleum producing) showed decreases ranging from 0·1 per cent to 1·2 per cent.

Aggregate employment in the 16 non-manufacturing industries combined showed a net gain of approximately 385,000 workers between November and December.

Manufacturing Industries. — December marks the eleventh consecutive month in which gains in factory employment have been shown, the increase of 1·0 per cent over the month interval raising the December index (97·7) to the highest level reached since December, 1929. Factory payrolls also increased from November to December, the rise of 4·5 per cent bringing the payroll index (94·6) above that of any preceding month since May, 1930. Both of these gains are of more than usual interest, the employment gain because of the fact that employment generally declines from November to December and the payroll gain, because of the rather sharp advance which was augmented by the large number of wage-rate increases which occurred between November 15 and December 15. More than 606,000 of the 4,200,000 factory wage earners covered in the monthly survey received increases in wage-rates between November 15 and December 15. The industries in which the largest numbers of employees were affected by these wage increases were blast furnaces-steelworks-rolling mills, cotton goods, woolen and worsted goods, brass-bronze-copper products, automobiles, electrical machinery, paper and pulp, tires and tubes, chemicals, petroleum refining, and foundries.

Factory employment in December, 1936, was 10·8 per cent above the December, 1935, level (88·2) and factory payrolls were 22·2 per cent above December, 1935 (77·4).

Fifty of the 89 manufacturing industries included in the survey showed more employees working in December than in the preceding month and 59 industries reported larger payrolls. The payrolls reported represent earnings only and do not include gift or bonus payments. Among the industries showing substantial seasonal gains in employment were fertilizers, 15·5 per cent; automobiles, 6·2 per cent; and agricultural implements, 6·0 per cent. Other industries showing large gains were woolen and worsted goods, 10·1 per cent; locomotives, 8·2 per cent; aircraft, 7·3 per cent; boots and shoes, 7·0 per cent; and iron and steel forgings, 5·9 per cent.

Gains in employment ranging from 4·1 per cent to 4·5 per cent were reported in the carpet and rug, dyeing and finishing textiles, hardware, stamped and enamelled ware, and lighting equipment industries. Industries of major importance in which smaller increases were reported were slaughtering and meat packing (3·2 per cent), blast furnaces-steel works-rolling mills (1·5 per cent), foundries and machine shops (2·3 per cent), electrical machinery (2·6 per cent), book and job printing (2·1 per cent), silk and rayon goods (1·8 per cent), cotton goods (1·8 per cent), and millwork (1·3 per cent). A further gain in employment of 2·1 per cent was shown in the machine tool industry continuing the succession of increases which have been reported in this industry each month with but one exception for more than two years. Employment in this industry in December was above the level of any month since June, 1930, and was 290·7 per cent above the low point of April, 1933.

Among the 39 industries in which declines in employment were shown seasonal slack resulted in decreases of 35·1 per cent in beet sugar, 14·8 per cent in canning and preserving, 7·6 per cent in jewellery, 7·2 per cent in millinery, 5·9 per cent in marble-slate-granite, 5·4 per cent in cottonseed oil-cake-meal, 4·6 per cent in cigars and cigarettes, 4·6 per cent in stoves, 3·5 per cent in radios and phonographs, 3·4 per cent in cement, and 1·8 per cent in confectionery. Other substantial declines were shown in shipbuilding (8·4 per cent), structural ironwork (4·4 per cent), and soap (4·5 per cent).

The indexes of factory employment and payrolls are computed from returns supplied by representative establishments in 89 manufacturing industries. The base used in computing these indexes is the 3-year average, 1923-1925, taken as 100. They have not been adjusted for seasonal variation. Reports were received in December, 1936, from 22,613 manufacturing establishments employing 4,179,434 workers, whose weekly earnings during the pay period ending nearest December 15 were $103,223,108.

Hon. T. A. Crerar, Minister of Mines and Resources, announced in the House of Commons recently that coal movements in Canada under assisted freight rates provided by the Government reached an all-time high in 1936 of 2,362,404 tons.

The statement said preliminary figures showed assistance for the movement had cost the Government $2,212,602 and that all coal-producing provinces benefited.

It said also the assistance was of "considerable aid to employment" and that the coal movements provided employment to more than 4,500 men, representing almost 1,000,000 men-days of work.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding contracts awarded by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

The Fair Wages Policy of the Dominion Government was originally adopted in 1900 and was expressed in an Order in Council of June 7, 1922, which was subsequently amended by an Order in Council of April 9, 1924. The Fair Wages Order in Council contains certain conditions marked "A" which are applicable to contracts for building and construction work, and certain other conditions marked "B" which apply in the case of contracts for the manufacture of various classes of Government supplies and equipment.

On December 31, 1934, an Order in Council was passed rescinding the "B" conditions previously in effect and substituting other conditions therefor, the full text of which appeared in the LABOUR GAZETTE for January, 1935, pp. 24-25. Provision had been made in the "B" labour conditions in their original form for the payment of wages rates not less than those generally accepted as current for competent workmen in the district in which the work is to be performed, or if there were no current rates then fair and reasonable rates. This provision was retained in the amending Order in Council of December 31, 1934, but with the added proviso that in no event shall the the wage rate for male workers 18 years of age and over be less than 30 cents an hour, and for female workers 18 years of age and over, less than 20 cents an hour. It is also provided that in any cases where the Provincial Minimum Wages Laws require the payment of higher wages than those set out above, such higher rates shall apply in the execution of Federal contracts. With respect to males and females under 18 years of age, it is required that they shall be paid rates of wages not less than those provided for women and girls in the Minimum Wages scales of the respective provinces.

As respects contracts for building and construction work, the "A" conditions of the Fair Wages Order in Council of 1922 as amended in 1924, were superseded in 1930, in so far as wages and hours are concerned by an Act of Parliament known as "The Fair Wages and Eight Hour Day Act, 1930." This Act, however, has now in turn been superseded by The Fair Wages and Hours of Labour Act, 1935, which came into force on May 1, 1936. The clause relating to wages and hours in the last-named statute is in the terms following:—

"All persons in the employ of the contractor, subcontractor, or any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall during the continuance of the work be paid fair wages;

"The working hours of persons while so employed shall not exceed eight hours per day or forty-hours per week except in such special cases as the Governor in Council may otherwise provide, or except in case of emergency as may be approved by the Minister."

The new Act like the 1930 measure, applies not only to contracts made with the Government of Canada for the construction, remodelling, repair or demolition of any work, but also to workmen employed on works of this nature by the Government direct who are excluded from the operation of the Civil Service Act. It contains, however, a provision which did not appear in the 1930 legislation, which applies the fair wages policy to works of construction, remodelling, repair or demolition that are assisted by federal grant in the form of contribution, subsidy, loan, advance or guarantee.

The practice of the different departments of the Government, before entering into contracts for the construction, remodelling, repair or demolition of any work, is to obtain beforehand from the Department of Labour schedules setting forth the current wage rates for the different classes of workmen required in the execution of the work. These schedules known as fair wages schedules, are thereupon included by the Department concerned in the terms of contract.

Both in the case of contracts for building and construction work and in the case of contracts for the manufacture and supply of fittings and supplies, the Minister of Labour is empowered to determine any questions which may arise as to wages rates for overtime and as to the proper classification of any work for the purposes of wages and hours. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade, or fair and reasonable hours on contracts for governmental supplies and equipment, the Minister of Labour is vested with authority to make binding decisions.

In the case of contracts for building and construction work and also of contracts for governmental supplies and equipment, the contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract

for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid out and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government, any time it may be expedient to the Minister to have the same inspected.

It is further declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wages rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workmen employed, claim therefor may be filed with the Minister of the Department with which the contract has been made and payments of such claim may be made by the latter.

All workmen employed in the execution of these contracts shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

In the case of contract for building and construction works, clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contracts are specially directed by the Fair Wages Orders in Council to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

In the case of contracts for the manufacture of the classes of supplies coming under the "B" Conditions of the Fair Wages Orders in Council, it is required that the contractor's premises and the work being performed under contract shall be open for inspection at any reasonable time by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts for dredging work also contain provisions for the observance of current or fair and reasonable rates of wages and hours, and empower the Minister of Labour to deal with any disputes which may arise.

During the past month statements were received in the Department of Labour showing that the following contracts have recently been executed by the Government of Canada.

Department of National Defence

Contracts in Group "A" (Construction, Remodelling, Repair, etc)

Construction of two seaplane hangars at R.C.A.F. Station, Jericho Beach, Vancouver, B.C. Name of contractors, Pacific Engineers Ltd., Vancouver, B.C. Date of contract, January 15, 1937. Amount of contract, $221,000.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos Insulation Workers	$0 85	8	44
Blacksmiths	0 75	8	44
Brick and hollow tile layers	1 10	8	44
Brick and hollow tile layers helpers—(continuously employed at mixing and tempering mortar)	0 50	8	44
Carpenters	0 80	8	44
Cement finishers	0 75	8	44
Cement and concrete mixer operator (steam)	0 90	8	44
Cement and concrete mixer operator (gas or elec.)	0 60	8	44
Compressor operators (gas or elec.)	0 60	8	44
Drivers	0 45	8	44
Driver, horse and cart	0 60	8	44
Driver, team and wagon	1 00	8	44
Engineers, operating, steam—single or double drums	0 90	8	44
Hoist operators (gas or elec.)	0 60	8	44
Electricians	1 00	8	44
Firemen—stationary	0 50	8	44
Labourers	0 45	8	44
Lathers, metal	1 00	8	44
Lathers, wood	0 75	8	44
Machinists	0 75	8	44
Motor truck drivers	0 50	8	44
Motor truck driver and truck—			
1-2 tons	1 50	8	44
3 tons	2 00	8	44
4 tons	2 50	8	44
5 tons	3 00	8	44
Ornamental iron workers	0 75	8	44
Painters and glaziers	0 80	8	44
Plasterers	1 00	8	44
Plasterers' helpers (continuously employed at mixing and tempering material)	0 62½	8	44
Plumbers and steamfitters	1 00	8	44
Roofers, felt and gravel	0 50	8	44
Rodmen, reinforced steel	0 60	8	44
Sheet metal workers	0 90	8	44
Shovel operators (gas)	1 12½	8	44
Steam shovel engineers	1 12½	8	44
Steam shovel cranemen	0 90	8	44
Steam shovel firemen	0 74½	8	44
Stone cutters	1 00	8	44
Structural steel workers	1 00	8	44
Tile setters, ornamental	1 12½	8	44
Tile setters helpers (all men assigned to help tradesmen)	0 50	8	44
Pile driver foreman	1 12½	8	44
Pile driver engineer	1 00	8	44
Pile driver bridgeman	0 90	8	44
Pile driver men	0 90	8	44
Pile driver labourers	0 45	8	44
Pile driver fireman	0 65	8	44
Watchman	0 40	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of worker are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a power house at the R.C.A.F. Station, Dartmouth, N.S. Name of contractors, Walters Construction and Engineering Co., Quebec, P.Q. Date of contract, January 14, 1937. Amount of contract, $26,600.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos Insulation Workers	$0 60	8	44
Blacksmiths	0 70	8	44
Brick and hollow tile layers	0 97½	8	44
Brick and hollow tile helpers (mixing and tempering mortar)	0 45	8	44
Carpenters	0 60	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operator (steam)	0 65	8	44
Cement and concrete mixer operator (gas and electric)	0 50	8	44
Compressor operators, gas. or elec.	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Drivers	0 40	8	44
Engineers, operating, steam: 1 or 2 drums	0 65	8	44
Engineers, operating, steam: 3 or more drums	0 75	8	44
Hoist operator—gas. or elec.	0 50	8	44
Electricians	0 80	8	44
Firemen—stationary	0 45	8	44
Labourers	0 40	8	44
Lathers, metal	0 60	8	44
Lathers, wood	0 55	8	44
Machinists	0 70	8	44
Motor truck driver	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Ornamental iron workers	0 60	8	44
Painters and glaziers	0 55	8	44
Plasterers	0 80	8	44
Plasterers' helpers (mixing and tempering material)	0 45	8	44
Plumbers and steamfitters	0 75	8	44
Roofers, felt and gravel	0 45	8	44
Rodmen—reinforced steel	0 50	8	44
Sheet metal workers	0 70	8	44
Shovel operators—gas	0 85	8	44
Steam shovel engineers	0 85	8	44
Steam shovel cranemen	0 65	8	44
Steam shovel firemen	0 55	8	44
Stonecutters	0 70	8	44
Structural steel workers	0 75	8	44
Tilesetters—ornamental	0 97½	8	44
Tilesetters helpers (all men assigned to help tradesmen)	0 45	8	44
Watchman	0 35	8	44

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a sewer at the Dominion Arsenal, Valcartier, P.Q. Name of contractor, Mr. J. A. Auclair, Monument, Giffard, P.Q. Date of contract, January 18, 1937. Amount of contract, $25,300.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters	$0 60	8	44
Cement finishers	0 55	8	44
Cement and concrete mixer opers.—			
Steam	0 60	8	44
Gas. or elec.	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 65	8	44
Drivers	0 40	8	44
Compressor operators, gas. or elec.	0 50	8	44
Engineers, operating, steam—			
Single or double drums	0 60	8	44
3 or more drums	0 70	8	44
Hoist operators—gas. or elec.	0 50	8	44
Firemen—stationary	0 45	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Plumbers and steamfitters	0 65	8	44
Pipe layers (C.I. pipe)	0 50	8	44
Watchmen	0 35	8	44

N.B.—The wage rates specified above are *minimum* rtesa only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Construction of a concrete conduit for the extension of a steam heating main at the Single Officers' Quarters, R.C.A.F. Station, Trenton, Ont. Name of contractors, the Frontenac Construction Co., Ltd., Toronto, Ont. Date of contract, January 22, 1937. Amount of contract, $3,920.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Asbestos insulation workers	$0 65	8	44
Carpenters	0 70	8	44
Cement finishers	0 60	8	44
Cement and concrete mixer operators (steam)	0 65	8	44
Cement and concrete mixer operators (gas. or elec.)	0 50	8	44
Compressor operators (gas. or elec.)	0 50	8	44
Drivers	0 40	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Firemen—stationary	0 45	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Plumbers and steamfitters	0 75	8	44
Rodmen—reinforced steel	0 50	8	44
Sheet metal workers	0 70	8	44
Structural steel workers	0 80	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Supply and installation of a travelling crane in the Workshop Building at Royal Canadian Air Force Station at Dartmouth, N.S. Name of contractors, Herbert Morris Crane & Hoist Co., Ltd., Niagara Falls, Ont. Date of contract, January 28, 1937. Amount of contract, $7,470.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Structural steel workers	$0 75	8	44
Machinists	0 70	8	44
Painters	0 55	8	44
Labourers	0 40	8	44
Electricians	0 80	8	44

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Excavation work for the Training Building at R.C.C.S. Depot at Barriefield, Ont. Name of contractor, Mr. Donald A. McLeod, Kingston, Ont. Date of contract, January 29, 1937. Amount of contract, $7,860.00. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Carpenters	$0 75	8	44
Cement finishers	0 95	8	44
Cement and concrete mixer opers.—			
Steam	0 65	8	44
Gas. or elec	0 50	8	44
Driver, horse and cart	0 55	8	44
Driver, team and wagon	0 75	8	44
Drivers	0 40	8	44
Labourers	0 40	8	44
Motor truck drivers	0 45	8	44
Motor truck driver and truck—			
1 and 2 tons	1 45	8	44
3 tons	1 95	8	44
4 tons	2 45	8	44
5 tons	2 95	8	44
Shovel operators—gas	0 90	8	44
Steam shovel engineers	0 90	8	44
Steam shovel firemen	0 55	8	44
Steam shovel cranemen	0 70	8	44
Steam shovel oilers	0 50	8	44
Stone cutters	0 95	8	44
Masons	0 95	8	44
Powdermen	0 50	8	44
Watchman	0 35	8	44

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Contracts in Group "B" (Manufacture of Supplies, Equipment, etc.)

The following is a statement of contracts awarded by the Department of National Defence during the month of January, 1937, for the manufacture and repair of various classes of equipment and supplies, which contracts included in all cases the "B" labour conditions above referred to:—

Nature of contract	Contractor
Whaling Boats, 27 ft	John Etherington Ltd., Shelburne, N.S.
Blankets	West Coast Woollen Mills Ltd., Vancouver, B.C.
Blankets	Bates & Innes Ltd., Carleton Place, Ont.
Waterproof coats	Croydon Mfg. Co., Ltd., Montreal, P.Q.
Barrack bedsteads	Ives Bedding Co., Ltd., Cornwall, Ont.
Whipcord	Paton Mfg. Co., Ltd., Montreal, P.Q.
Winter caps	Jay Wolfe Inc., Montreal, P.Q.
Forage caps	Hamilton Uniform Cap Co., Hamilton Ont.
Serge doublets	S. S. Holden Ltd., Ottawa, Ont.
Soldiers' boxes	Hugh Carson Co., Ltd., Ottawa, Ont.
Overhaul and modification of aeroplane engines (2).	Canadian Wright Ltd., Montreal, P.Q.
Reconditioning of seaplane	Wells Air Harbour, Lulu Island, Eburne, P.O., Vancouver, B.C.
Complete overhaul of aeroplane engine.	Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q.
Launch, 38 ft	Ditchburn Boats & Aircraft Ltd., Gravenhurst, Ont.
Complete overhaul of aeroplane engine.	Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q.
Marquee tents	J. J. Turner & Sons, Ltd., Peterborough, Ont.
Camp cooking ranges and parts	Galt Stove & Furnace Co., Preston, Ont.
Tent pins	J. E. & A. Amyot, Ottawa, Ont.
Serge jackets, drab	The Workman Uniform Co., Ltd., Montreal, P.Q.
Circular tents	Ross Smith & Co., Montreal, P.Q.
Circular tents	Woods Manufacturing Co., Ottawa, Ont.
Aeroplane engine	Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q.
Complete overhaul of aeroplane engine.	Canadian Pratt & Whitney Aircraft Co., Ltd., Longueuil, P.Q.
Peg-Top buoys—1st class	Halifax Shipyards Ltd., Halifax, N.S.
Transmitters (four-channel), etc.	Canadian Marconi Co., Ltd., Montreal, P.Q.
Transformers, telegraph	Canadian Marconi Co., Ltd., Montreal, P.Q.
Wireless set parts	Northern Electric Co., Ltd., Montreal, P.Q.

Contracts for the Manufacture of Aircraft

Three contracts for the manufacture of aircraft, namely (1) for Stranraer Boat Seaplanes to Canadian Vickers Ltd., Montreal; (2) for Northrop "Delta" Aircraft to Canadian Vickers

Ltd., Montreal; and (3) for Wright Cyclone Engines to Canadian Wright Ltd., Montreal, were awarded subject to the following fair wages schedule:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day / per week
Engine assembly—		
Fitter (A.E.)	$0 55	48
Fitter's helper (A.E.)	0 40	48
Machinist	0 55	48
Machinist's helper	0 40	48
Machine operators	0 50	48
Sandblaster	0 45	48
Labourers over 18 years of age	0 35	48
Labourers under 18 years of age	0 30	48
Airframe construction and assembly—		
Fitter (A.F.)	0 55	48
Fitter's helper (A.F.)	0 40	48
Machinist	0 55	48
Machinist's helper	0 40	48
Machine operator	0 50	48
Woodworker (joiner)	0 55	48
Woodworker's helper	0 40	48
Welder	0 55	48
Welder's helper	0 40	48
Electrician	0 55	48
Electrician's helper	0 40	48
Painter	0 55	48
Painter's helper	0 40	48
Fabric worker—female	0 35	48
Fabric worker's helper	0 25	48
Upholsterer	0 55	48
Upholsterer's helper	0 40	48
Sandblaster	0 45	48
Labourers over 18 years of age	0 35	48
Labourers under 18 years of age	0 30	48
Erector	0 55	48
Erector's helpers	0 40	48
Sheet metal worker	0 55	48
Sheet metal worker's helper	0 40	48
Doper	0 50	48
Apprentices to fitters, machinists and sheet metal workers only—16 to 21 years of age—		
1st year	0 20	48
2nd year	0 25	48
3rd year	0 35	48

NOTE.—Only one helper to be employed to each journeyman. Not more than one apprentice to be employed to each 5 journeymen.

POST OFFICE DEPARTMENT

Contracts in Group "B" (Manufacture of Supplies, etc.)

The following is a statement of contracts awarded by the Post Office Department during the month of January, 1937, for various classes of manufactured goods, which contracts included in all cases the "B" labour conditions above referred to:—

Supplies ordered	Contractor
Dating stamps and type, brass crown, seals, cancellers, etc.	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Rubber stamps, daters, etc., also repairs to same	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Letter carriers' uniforms	Pollack & Dorfman, Quebec, P.Q.
" "	M. Feldstein Son Co., Montreal, P.Q.
" "	Horn Bros. Woollen Co., Ltd., Lindsay, Ont.
" "	Wilfrid Rousseau, Montreal, P.Q.
" "	Canadian General Rubber Co., Ltd., Galt, Ont.
Mail bag fittings	Fred W. Carling, Ottawa, Ont.
" "	J. Spencer Turner Co., Hamilton, Ont.
" "	Smallman & Ingram Ltd., London, Ont.
" "	Hugh Carson Co., Ltd., Ottawa, Ont.
Stamping machines, etc.	Machine Works, Ltd., Ottawa, Ont.
Scales	Pritchard-Andrews Co., Ltd., Ottawa, Ont.
Scales	Gurney Scale Co., Ltd., Hamilton, Ont.
Satchels	S. S. Holden Ltd., Ottawa, Ont.

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, Remodelling, Repair, etc.)

Construction of wharf repairs at Port Clements, B.C. Name of contractor, Mr. A. Robertson, Port Clements, B.C. Date of contract, December 11, 1936. Amount of contract, approximately $3,663. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Pile driver foreman	$1 12½	8
Pile driver engineer	1 00	8
Pile driver man	0 90	8
Boomman	0 90	8
Bridgeman	0 90	8
Fireman	0 65	8
Labourer	0 45	8

In any case where, by agreement or current practice, the working hours of any class of workmen are less than 48 per week, such lesser hours shall not be exceeded on this contract.

Construction of alterations and additions to the R.C.N.V.R. Building at Prince Rupert, B.C. Name of contractors, Messrs. John and Charles Currie, Prince Rupert, B.C. Date of contract, December 19, 1936. Amount of

contract, $8,500. A fair wages schedule was inserted in the contract as follows:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than	
	per hour	per day	per week
Cement and concrete mixer oper.—			
Gas. or electric	$0 60	8	44
Steam	0 90	8	44
Cement finishers	0 75	8	44
Stonemasons	1 10	8	44
Stonemasons' helpers*	0 50	8	44
Brick and hollow tile layers	1 10	8	44
Brick and hollow tile layers' helpers*	0 50	8	44
Carpenters and joiners	0 85	8	44
Sheet metal workers	0 90	8	44
Roofers, felt and gravel	0 50	8	44
Lathers, metal	1 00	8	44
Plasterers	1 00	8	44
Plasterers' helpers*	0 62½	8	44
Painters and glaziers	0 80	8	44
Plumbers and steamfitters	1 00	8	44
Plumbers and steamfitters' helpers (all men assigned to help tradesmen)	0 50	8	44
Electricians (inside wiremen)	1 00	8	44
Labourers	0 45	8	44
Driver, team and wagon	1 00	8	44
Driver	0 45	8	44
Motor truck driver	0 50	8	44
Motor truck driver and truck—			
1 to 2 tons	1 50	8	44
3 tons	2 00	8	44
Watchman	0 40	8	44

* Continuously employed mixing and tempering mortar or material.

N.B.—The wages rates specified above are *minimum* rates only and nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation.

Where, by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work.

Dredging work at Black River, Ont. Name of contractors, Cummins Construction Company, Montebello, Que. Date of contract, December 21, 1936. Amount of contract, approximately $7,185. The General Fair Wages Clause was inserted in the contract.

Dredging work at Harrison River, B.C. Name of contractors, McKenzie Barge & Derrick Co., Ltd., Vancouver, B.C. Date of contract, January 9, 1937. Amount of contract, approximately $12,600. The General Fair Wages Clause was inserted in the contract.

Correction

In the LABOUR GAZETTE *for November,* 1936 (pp. 1058-59), particulars were given of a contract that was awarded on October 6, 1936, to the Meteghan Shipbuilding Co., Ltd., Meteghan, N.S., amounting to $57,508, for the construction of a three-masted wooden auxiliary sailing schooner to be delivered to H.M.C. Dockyard at Halifax, N.S. The fair wages schedule quoted as having been inserted in the contract, however, was not the one included in the contract and was printed by mistake. The following is the text of the clause and fair wages schedule which were inserted in this contract:

All workmen, labourers, or other persons who perform labour on the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rate in such district, then a fair and reasonable rate. In no event shall the wages be less than those set out in the schedule of minimum rates hereunder. The working hours shall not exceed eight hours a day, unless, for the protection of life or property or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The following is the schedule of wages and working day hours:—

Trade or class of labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Blacksmiths	$0 45	8
Caulkers—wood	0 45	8
Joiner	0 45	8
Machinists	0 50	8
Pipefitters	0 50	8
Electricians	0 50	8
Painters	0 45	8
Shipwright	0 45	8
Labourers	0 30	8

N.B.—Where, by agreement or current practice, the working hours of any class of workers are less than 48 per week, such lesser hours shall not be exceeded on this work.

The Vocational Division, Office of Education of the United States Department of the Interior, has issued a "Digest of Annual Reports of State Boards for Vocational Education." This digest comprises (1) a general introductory survey of developments in the field of vocational education and vocational rehabiliation of disabled persons during 1935; (2) a summary of descriptive reports by the States covering administration and developments under State plans in the several fields of vocational education—agricultural, trade and industrial, home economics, and commercial—and in the field of vocational rehabilitation of the disabled; and (3) statistical and financial tables compiled from State report showing by States expenditures of Federal, State and local money, enrolments in Vocational schools, and number of disabled persons vocationally rehabilitated.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received in the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Transportation and Public Utilities: Water Transportation

ST. ANDREWS, N.B.—CANADIAN PACIFIC RAILWAY COMPANY AND THEIR EMPLOYEES CONNECTED WITH BOAT TRAFFIC THROUGH THE PORT OF ST. ANDREWS.

Agreement was reached following mediation by officials of the Department of Labour.

Agreement to be in effect from February 1937, subject to 30 days' notice from either party.

Payment of wages will be made at the rate of 30 cents per ton handled to be divided amongst the gang of men working.

Men called to work will receive pay for at least a minimum of four tons handled. Work performed during meal hours and after same meal hour until relieved, and work on Sundays and seven specified holidays to be paid at time and a half.

Seniority to govern preference in employment.

Any employee disciplined may appeal to officials of the Company and may be assisted at any hearings by other employees.

Service: Personal and Domestic

WINNIPEG, MANITOBA.—CERTAIN DYERS AND CLEANERS AND THE ASSOCIATION OF LAUNDERERS AND DRY CLEANERS, FEDERAL UNION No. 92.

Agreement to be in effect from September, 1936, to March 31, 1937, and for another year if no notice of change is given by either party. (A strike to secure this agreement in one establishment was noted in the LABOUR GAZETTE, October, 1936 page 884).

Only union members to be employed.

Hours: 48 per week.

One week's holiday per year with pay to be given employees.

Wages: employees are to receive the same wages for a 48-hour week as they formerly received for their 50- and 54-hour week.

Any disputes are to be taken up with the shop committee and the employer. If they fail to reach an agreement, a union representative will be called on to assist. No strike or lockout to occur pending negotiations.

Quebec Collective Labour Agreements Extension Act

The following agreements and amendments to agreements have recently been made obligatory by Orders in Council and are noted in the next article in this issue:

Bakers and Bakery Salesmen, Montreal.

Plumbers and Steamfitters, Three Rivers.

Women's Cloak and Suit Industry, Province of Quebec (Amendment).

Furniture Industry, Province of Quebec (Amendment).

Industrial Standards Act of Ontario

The following schedules have been made binding by Orders in Council and are summarized on page 218.

Barbering Trade, St. Thomas.

Barbering Trade, Barrie.

Women's Cloak and Suit Industry, Province of Ontario.

The *Royal Gazette* of Nova Scotia dated January 13, 1937, contains regulations of the City of Halifax Health Board relating to the inspection and measuring of bread and bakery products and the manufacture and sale of such products.

The report of the Minister of Public Works of Canada for the fiscal year ended March 31, 1936, indicates a total expenditure incurred by the department during the period on its various works of construction maintenance and operation of $31,098,862.49. Of this total, $7,323,677.94 was expended on public buildings; $3,428,445.23 on harbour and river works, $1,208,231.36 on dredging. Also included in this total of $31,098,862.49 were expenditures on works carried out under the provisions of the Public Works Construction Act of 1934, and the Supplementary Public Works Construction Act, 1935, amounting to $17,891,039.15. The balance of the total expenditure is made up in smaller amounts expended on roads, bridges, telegraphs, civil government, etc. As compared with the total for the fiscal year ending March 31, 1935, the total expenditure including the amount expended under the provisions of the Public Works Construction Act, 1934, and the Supplementary Public Works Construction Act, 1935, shows an increase of $14,922,498.64.

COLLECTIVE LABOUR AGREEMENTS EXTENSION ACT OF QUEBEC

Agreements Recently made Obligatory and Further Applications

RECENT proceedings under the Collective Labour Agreements Extension Act of Quebec include the extension by Order in Council of agreements affecting bakers at Montreal and plumbers at Three Rivers, and amendments to the Orders in Council affecting the cloak and suit industry and the furniture industry throughout the Province. In addition, a request has been published in the *Quebec Official Gazette,* January 16, for an amendment to the Order in Council affecting barbers at Quebec, and in the issue of January 30 to the Order in Council governing the furniture industry throughout the Province.

The text of the Collective Labour Agreements Extension Act, Quebec, was printed in the Labour Gazette, May 1934, page 417, and amendments to the Act were summarized in the issue of June, 1935, page 526, and July, 1936, page 607 and December, page 1127. Under this Act applications may be made to the provincial Minister of Labour by either party to a collective agreement made between, on the one hand, one or more associations of *bona fide* employees, and on the other hand, employers or one or more associations of employers, to have those terms of such agreement which concern rates of wages, hours of labour and apprenticeship made obligatory on all employees and employers in the same trade, industry or business within the territorial jurisdiction determined by the agreement. The application is then printed in the *Quebec Official Gazette,* and during the following thirty days, objections may be made to the Minister of Labour. After this delay, if the Minister of Labour deems that the provisions of the agreement "have acquired a preponderant significance and importance" that would make the establishment of these conditions advisable, an Order in Council may be passed making the terms obligatory on all employees and employers in the trade, industry or business in the territory included in the agreement from the date of the publication of the Order in Council in the *Quebec Official Gazette* for the duration of the agreement. The provisions of an agreement thus made obligatory govern all individual labour contracts in the trade, industry or business and district, except that those individual contracts which are to the advantage of the employee will have effect unless expressly prohibited in the agreement which has been approved by Order in Council. The applications for extension of agreements have been noted and the conditions of the various agreements made obligatory by Orders in Council have been given in the Labour Gazette beginning in the issue of June, 1934.

Bakers and Bakery Salesmen, Montreal.—An Order in Council, approved December 24, and published in the *Quebec Official Gazette,* January 2, makes obligatory the terms of an agreement between certain bakeries and Le Syndicat des Employés de la Boulangerie et de la Pâtisserie, Inc. (Union of Bakery and Pastry Employees), affecting bakers and bakery salesmen, employees of bakeries on the Island of Montreal and of bakeries outside the Island of Montreal who sell part or all of their production on the Islanad of Montreal.

The Order in Council is in effect from January 2, to December 31, 1937, and thereafter from year to year until either party gives notice of change. The wage scale may be revised in April, 1937.

Hours: 60 per week for foremen, bakers, helpers and apprentices.

Overtime at straight time.

Minimum weekly wage rates: in all bakeries with three or more employees, one shall be a foreman at a minimum wage of $22; in all bakeries of five or more employees, the minimum for a man in charge of ovens or doughs or pastry department is $22; journeymen bakers and pastry cooks $18, helpers $15, apprentices $10 first year, $12 thereafter; jobbers $3.50 per ten hours of work or part, plus 35 cents per hour for every hour exceeding ten; salesmen $15.

A salesman will be held responsible only for credit which he grants a customer after having been forbidden to do so in writing by his employer.

Not more than 20 per cent of the total number of employees in each bakery may be apprentices and not more than 20 per cent helpers.

Where uniforms are supplied and sent to the laundry, the employer shall not charge employees more than the actual cost of the service.

Plumbers and Steamfitters, Three Rivers.—An Order in Council, approved December 21, and published in the *Quebec Official Gazette,* January 30, makes obligatory the terms of an agreement between certain plumbing, steamfitting, refrigerating, automatic sprinkling and tinsmith roofing contractors and l'Union Nationale Catholique des Plombiers Inc., des Trois-Rivières (The National Catholic Union of Plumbers, Incorporated, of Three Rivers).

The agreement is in effect from January 30, 1937, to January 30, 1938, and thereafter from year to year until either party gives notice of change.

The territorial jurisdiction includes the counties of Maskinonge, Saint Maurice, Laviolette, Champlain and Three Rivers.

Hours: 8 per day, 48 per week.

Overtime: work performed between 6 p.m. and 7 a.m. to be paid at time and one half.

Minimum hourly wage rates: journeymen plumbers, steamfitters, refrigerating setters, automatic sprinklers and tinsmith roofers 45 cents, apprentices 10 cents during first year, 15 cents during second year, 20 cents during third year and 25 cents during fourth year; foremen 10 cents per hour extra; contractors working personally for any person or company to be paid 20 cents per hour extra.

Travelling expenses of workmen sent out of town to be paid by employers.

WOMEN'S CLOAK AND SUIT INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved December 24, and published in the *Quebec Official Gazette*, January 2, amends the previous Orders in Council (LABOUR GAZETTE December, 1935, page 1156, March 1936, page 275 and April page 371) by redefining the manufacture of cloaks and suits for children up to the age of 14 which is excluded from this agreement if they are made entirely by the same method of production as those employed in the men's and boys' clothing industry.

FURNITURE INDUSTRY, PROVINCE OF QUEBEC.—An Order in Council, approved January 21, and published in the *Quebec Official Gazette*, January 30, amends the previous Order in Council for this industry by providing for the following minimum wage rates from February 1, 1937: Three minimum rates are in effect in each zone: in Zone I, 31 cents, 28 cents and 25 cents, in Zone II, 28 cents, 25 cents and 22 cents; in Zone III, 26 cents, 23 cents and 20 cents. From February 1, 1937, 20 per cent of the number of workmen over 21 years of age are to receive at least the highest rate in each zone, an additional 10 per cent at least the intermediate rate and the remaining 70 per cent at least the lowest minimum rate. From March 1, 1937, 20 per cent are to receive at least the highest rate, an additional 20 per cent the intermediate rate and the remaining 60 per cent at least the lowest minimum rate. From June 1, 1937, 20 per cent must receive at least the highest rate, an additional 30 per cent at least the intermediate rate and the remaining 50 per cent at least the lowest rate.

INDUSTRIAL STANDARDS ACT OF ONTARIO

Schedules Recently Approved by Orders in Council

THE Industrial Standards Act of Ontario, the text of which was printed in the LABOUR GAZETTE, June, 1935, page 534, with amendments in the issue of May, 1936, page 410, provides that the Minister of Labour for Ontario may, upon petition of representatives of employees or employers in any industry, in any zones or zones investigate the conditions of labour and practices in such industry and negotiate standard rates of wages and hours of labour. The employees and employers in attendance may formulate and agree upon a schedule of wages and hours of labour for all or any class of employees in such industry or district. If, in the opinion of the Minister, a schedule of wages and hours for any industry is agreed upon in writing by a proper and sufficient representation of employees and of employers, he may approve of it, and upon his recommendation, the Lieutenant-Governor in Council may declare such schedule to be in force during pleasure or for the period, not exceeding twelve months, stipulated in the schedule, and thereupon such schedule shall be binding upon every employee or employer in such industry in the whole or any part of the Province designated by the Minister, such schedule not coming into effect until ten days after publication of the Order in Council in *The Ontario Gazette*. The Minimum Wage Board has authority to enforce the provisions of the Act and of the regulations and schedules. Beginning with the July, 1935, issue of the LABOUR GAZETTE, summaries are given in this article of the schedules which have thus been approved.

BARBERS, ST. THOMAS.—An Order in Council, dated January 4, and published in *The Ontario Gazette*, January 9, makes binding a schedule of wages and hours governing the barbering trade in the city of St. Thomas.

The Order in Council is in effect from January 19, 1937, "during pleasure."

Work may be performed on any day except Sundays, Wednesday after 12 o'clock noon and eight specified holidays, providing that work may be done after noon on Wednesday in any week in which one of the eight specified holidays occurs.

Class A consists of persons regularly employed on a percentage basis by a master barber, class B of master barbers who personally perform work at the trade and any person who carries on a business in a one-chair establishment or who operates a barber chair in any shop as a separate unit. For these classes A and B, the minimum rate of wages is "such percentage of the earnings of the barber or chair operated by him as will ensure to the barber a minimum wage equivalent to what he would have received for the same work if he had been employed pursuant to an arrangement whereby he would receive 70 per cent of the amount taken in at the following shop prices"; haircut (adults), 35 cents; hair cut (children), shave, singe, 25 cents; hair tonic 15 cents; shampoo (plain), facial massage (plain), 35 cents; razor honing, 35 cents.

Class C consists of persons who are regularly employed on a weekly salary basis and the minimum wage rate is $20 per week.

Class D consists of persons who are not regularly employed at the trade and for these the minimum rate is $3 per day except when they are employed only on Saturdays or the day preceding a holiday, in which case they shall be paid $5 per day. If engaged for less than one day, 60 cents per hour with at least three hours' pay.

No deduction from wages to be made for materials supplied, laundry service or operating expenses of any kind.

Apprentices to be governed by the Ontario Apprenticeship Act.

Barbers, Barrie.—An Order in Council, dated January 16, and published in *The Ontario Gazette*, January 23, is similar to the schedule for barbers at St. Thomas as noted above with the exception that the minimum wage rate for barbers employed by the week is $22 and those on a percentage of earnings is 65 per cent of the amount taken in at certain shop prices (in some cases lower prices than are shown for St. Thomas).

Women's Cloak and Suit Industry.—An Order in Council, dated January 27, and published in *The Ontario Gazette*, January 30, makes binding the terms of a schedule governing the women's cloak and suit industry throughout the province of Ontario.

The schedule is in effect from February 9, to December 31, 1937.

It includes the manufacture of cloaks, coats, suits, wraps and skirts, except for girls up to the age of 14 where such articles are not manufactured by an employer who makes these articles for those over 14 years, and except such articles made out of knitted goods and except the manufacture of ski suits, skating suits, athletic jackets or uniforms, riding jackets, lounging robes, bath robes, kimonas, windbreakers, pyjamas, beach wraps, blazers, odd jackets and except custom tailoring.

Hours: 8 per day, from Monday to Friday inclusive, a 40 hour week.

Overtime: no overtime permitted on any Friday or Saturday or between Easter Monday and August 1, or between October 1 and January 15. Provided there are no unemployed workers in the industry or that in the particular shop where overtime is requested there is no available space or machines for additional employees, the Advisory Board may grant an employer permission for overtime but for not more than two hours in any one day, or eight hours in any week during the first half of the period of this schedule or more than four hours in any week during the second half of the period. Overtime so permitted may be paid for at the regular wage rate.

Minimum hourly wage rates: fully skilled cutters 80 cents, semi-skilled cutters 55 cents, trimmers 60 cents, skilled fur tailors 65 cents, assistant fur tailors 44 cents, button sewers 34 cents, general hands and examiners 34 cents, skilled operators 80 cents, semi-skilled operators 55 cents, top pressers and machine pressers 80 cents, under pressers 75 cents, piece pressers 45 cents; lining makers, finishers and skirt makers 42 cents; machine basters, hand basters, special machine operators 44 cents. Skilled female operators shall be 20 per cent below the skilled male operators minimum, female semi-skilled operators shall be 10 per cent below the semi-skilled male operators minimum, provided that the wages or remuneration of any female operator of equal productivity or performing the same operations on piece work basis as a male operator shall be equal to that payable to the male operator. In any event the minimum scale for female section operators shall be the same as that of male section operators.

The Advisory Board may set a lower minimum rate for any worker whose production is found by the Board to be under normal.

32077—7½

Handbook of American Trade-Unions.

The Bureau of Labor Statistics of the United States Department of Labor, has just issued bulletin No. 618, being the 1936 edition of "The Bankbook of American Trade Unions."

It is stated in the preface that due to the constant shifts and changes in the American labor movement, such as the affiliation with the American Federation of Labor of independent groups, the merger of other groups, the creation of national and international unions out of local units that had been under the jurisdiction of the American Federation of Labor, all combined to make it necessary to treat the situation as of an arbitrary date, namely March 1, 1936.

The handbook is divided into two parts. Part I presents, in Chapter 1, a brief review of the outstanding changes and developments that have occurred within the labor movement since 1929, when the previous edition of the handbook was published. Succeeding chapters discuss important activities and aspects of trade unionism and the constitutional provisions by which these are regulated. The specific features treated are: Collective bargaining machinery; trade union benefits; promotion of union labels; governmental structure; and qualifications for membership. The American Federation of Labor is discussed briefly in chapter 7.

Part II contains the major part of the bulletin, the information covering the 156 national and international unions. Data presented for each of these organizations deal with its relation to the American Federation of Labor, the date of its founding and its historical development, as far as that is obtainable, and the essential facts of its structure and functions arranged under the following headings: (1) Objects; (2) territorial jurisdiction; (3) trade jurisdiction; (4) government; (5) qualifications for membership; (6) apprenticeship regulations; (7) method of negotiating agreements; (8) benefits; (9) official organ; (10) headquarters; (11) organization, i.e., extent and distribution; (12) membership reported to the Bureau of Labor Statistics.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1937

Cost of Living, Prices of Staple Articles and Index Numbers

THE cost of the weekly family budget in terms of retail prices was again somewhat higher, due to a slight increase in the cost of foods, while the Dominion Bureau of Statistics index number of wholesale prices continued to advance during the first half of the month and then declined slightly.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of average retail prices in sixty-nine cities was $8.41 at the beginning of January as compared with $8.36 for December, 1936; $8.17 for January, 1936; $7.51 for January, 1935; $6.67 for March, 1933 (the low point in recent years); and $11.88 for January, 1930. The largest change during the month under review was a substantial fall in the cost of eggs. Other changes were slight, the most important being advances in the cost of meats, milk, butter, flour, rolled oats and potatoes. Including the cost of fuel and rent with that of foods the total budget was $17.04 at the beginning of January as compared with $16.99 for the previous month. In fuel, price changes were slight and no changes were reported in rent. Comparative figures for the cost of the budget for earlier dates are $16.68 for January, 1936; $15.99 for January, 1935; $15.41 for June, 1933 (the low point in recent years); $22.17 for January, 1930; $21.52 for January, 1922; $26.92 for July, 1920 (the post war peak) and $14.49 for January, 1914.

In wholesale prices the weekly index number calculated by the Dominion Bureau of Statistics and based upon prices in 1926 as 100 continued to advance during the first half of the month and then declined slightly. It was however higher at the end of the month than at the beginning, the figures being 81·6 for the week ended January 29; 81·9 for that of January 15; and 80·9 for that of January 8. The latest figures available on a monthly basis are for December, 1936, when the index number was 79·7 as compared with 72·9 for January, 1936; 71·4 for January, 1935; 63·5 for February, 1933 (the low point in recent years); 95·3 for January, 1930; 97·1 for January, 1922; 164·3 for May, 1920 (the post war peak); and 64·9 for January, 1914. The slight decline during the last half of the month under review was due mainly to lower prices for certain commodities which had advanced substantially during recent months, namely, grains, non-ferrous metals, raw silk, cocoa and sugar. Toward the close of the month there was improvement in the export demand for wheat and the price rose somewhat. The prices of copper, livestock and meats were also firm at the end of the month, while eggs continued downward. The farm products group was more than 30 per cent higher at the end of the month than at the end of January, 1936.

Explanatory Note as to Retail Prices

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent of six-roomed houses in sixty-nine cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotations are given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The price of foods and groceries in each city except milk and bread are the average of quotations reported to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. Information as to prices of milk, bread and fuel and the rates for rent is secured by the correspondents of the LABOUR GAZETTE, and also by the Bureau of Statistics.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition, less desirably located but still fairly central, without modern conveniences.

The figures as to rentals are the rates in the leases or agreed upon between landlords and tenants. It is reported in many of the cities that tenants seriously affected by unemployment are not paying rent or are paying only part of the amount due.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil and rent, these being the items for which figures were available when the publication of retail prices statistics was begun, that is for January, 1910, in the LABOUR GAZETTE for February, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing

(Continued on page 228)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY-NINE CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost or the quantities of different foods required for an average family

price per cord from price quoted. f. Petroleum coke. g. Natural gas used extensively. h. Including lignite. i. Including conveniences. r. Mining company houses in district $5–$10 per month; others, five and six rooms, $10–$35. s. Delivered

(Continued from page 220)

to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tend to be maintained. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. The figures for rent are those for six-roomed houses with modern conveniences. While the budget serves to show the increases or decreases from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province.

Index Numbers of Changes in the Cost of Living

The accompanying table of index numbers of changes in the cost of living, based on prices in 1913 as 100, shows the percentage changes for the principal groups of expenditure for workingmen's families in cities since 1913. The figures for food are calculated from the cost of the food group in the weekly family budget. For the fuel and light group each month the index number is calculated from the cost of coal, wood, coal oil, gas and electricity, the figures for the last two being weighted according to population, differences in rates in the various cities being greater in these items than in the others. An index number for rent is calculated for each city from the rates for six-roomed houses with modern conveniences, the Dominion average being weighted according to population in each city. The index numbers for clothing and sundries were calculated from the prices and costs of the various items from 1913 to 1926, weighted according to the importance of each item in workingmen's family expenditure, and have been brought down to date each month from data compiled by the Dominion Bureau of Statistics.

Retail Prices

Meat prices for the most part were higher at the beginning of January following the gradual decline month by month since the summer. Changes were of a minor nature, sirloin steak advancing from an average of 22·1 cents per pound in December, 1936, to 22·9 in January, 1937; shoulder roast of beef from 11·8 cents per pound to 12·2 cents; and mutton roast from 20·5 cents per pound to 21 cents. Fresh and salt pork also were fractionally higher, while bacon and ham were unchanged. Egg prices were considerably lower in practically all localities, the fresh grades being down from an average of 45·7 cents per dozen in December, 1936, to 39·4 cents in January, 1937. Prices of this commodity were higher in cities in the Maritime Provinces than in most other localities. Higher

†The Dominion Bureau of Statistics issues reports on prices with comprehensive figures as follows:—weekly, Index Numbers of Wholesale Prices (Canada); monthly, Prices and Price Indexes (Canada); quarterly, Price Movements in other Countries; annually, Prices and Price Indexes (Canada and Other Countries).

‡For the week ended January 29, 1937 monthly figures not yet available.

*Prior to 1926 number of commodities was 236, 1926 to 1933 inclusive 502, and since January, 1934, the number is 567.

prices for milk were reported from several cities and the Dominion average price was up from 10·4 cents per quart to 10·7 cents. Dairy butter advanced in most localities, the average being 26·9 cents per pound as compared with 26 cents in the previous month. The price of potatoes averaged 5 cents per ninety pounds higher at $1.55. Anthracite coal prices were practically unchanged.

Following are the prices reported for Welsh coal, "cobbles" and "French nut"—Halifax, $15.50; Charlottetown, $12.90; Moncton, $15.50; Saint John $14; Quebec, $13; Three Rivers, $15 and $14; Sherbrooke, $15 and $15.50; St. Hyacinthe, $13.50; Montreal, $13.25 and $13.50; Ottawa, $15.25; Kingston, $14.50; Belleville, $15; Peterborough, $15.75; Oshawa, $14.75; Toronto, $14.50 and $14; St. Catharines, $15; Hamilton, $14.50; Brantford, $16.50; Galt, $16; St. Thomas, $16; Cobalt, $18; Timmins, $18; Port Arthur, $17.25; Fort William, $17.25; Winnipeg, $20.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes afford information as to recent changes in prices in Great Britain and certain other countries. Tables giving the official and certain other index numbers of cost of living, retail and wholesale prices in Great Britain and several of the principal commercial and industrial countries are included in "Prices in Canada and Other Countries, 1936" which is a supplement to the January issue of the LABOUR GAZETTE.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1930=100, was 100·8 for December, an advance of 2·5 per cent for the month. Increases were recorded in each of the eleven groups, the greatest being in wool, non-ferrous metals and cereals.

The *Statist* index number, on the base 1867-1877=100, was 98·6 at the end of December, an advance of 4·7 per cent for the month. Substantial increases were noted in all groups except "animal food" which was unchanged.

COST OF LIVING.—The Ministry of Labour's index number, on the base July 1914=100 was 151 at January 1, showing no change from the previous two months. Slight increases were, however, noted in the clothing and fuel and light groups.

France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base July, 1914=100, was 499 for December, an increase of 5·5 per cent for the month. Considerable increases were recorded in all groups.

COST OF LIVING.—The official index number of the expenditure of a workingman's family of four persons at Paris, on the base 1914=100, was 540 for the fourth quarter of 1936, an increase of 7 per cent over the previous quarter.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 105·0 for December, an increase of 0·6 per cent for the month and of 2·3 per cent over the figure for December, 1935. The principal increases for the month were noted in rubber, technical oils and fats, non-ferrous metals and colonial products.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 124·9 for December, showing no change from the previous level. No marked changes were recorded in any of the groups.

United States

WHOLESALE PRICES.—Bradstreet's index number (continued by Dun and Bradstreet, Incorporated) which is based on the sum total of the price per pound of 96 articles in common use, was $11·1360 at January 1, an advance of 3·2 per cent for the month. All groups were included in the increase except fruits which declined slightly and the chemicals and drugs group which was unchanged.

Dun's index number based on the cost *per capita* of a year's supply of commodities was $206·544 at January 1, a rise of 7 per cent for the month. All groups were included in the general advance.

COST OF LIVING.—The Department of Labour's index number, on the base 1913=100, was 143·6 at December 15, 1936, showing no change from the September 15 level. A decrease of 1·7 per cent in food prices for this period was counteracted by small advances in the other groups.

Workmen's Compensation Assessment Rates in New Brunswick.

Notice of assessment rates under the Workmen's Compensation Act for the Province of New Brunswick as published in the *Royal Gazette* (New Brunswick) indicate one minor change. Stone dressing operations formerly included under the quarrying group is now rated separately at an assessment of $1.50. The assessment rates are based on every $100 of payroll in the province under the jurisdiction of the Act. The highest assessment rate is that for tunnelling rock work and blasting, and for steel bridge construction in which group the rate is $8 per $100 of payroll. Erection of steel buildings carries an assessment of $7; quarrying, $7; saw-mills, shingle mills, etc., $6.50; logging, etc., $6.50; coal-mining, $6; stevedoring, $6; bridge construction, $6. The lowest rating is for printing, manufacture of plating gold, watch-making, lens manufacturing at 20 cents per $100 of payroll. A similar assessment (20 cents per $100 of payroll) is made in the manufacture of clothing, hats, other than felt, shirts, corsets, furs, oil clothing and awnings.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1936

THE number of fatal industrial accidents (including fatalities from industrial diseases reported with fatal accidents by workmen's compensation boards, etc., as well as fatalities to persons incidental to the pursuit of their occupations) which were recorded in the Department as occurring during the second quarter of 1936 was 287, there being 130 in October, 99 in November and 58 in December.

The report for the third quarter of 1936, showing 288 fatalities, was given in the LABOUR GAZETTE, November, 1936, page 1094. In the fourth quarter of 1935, 245 fatal accidents were recorded (LABOUR GAZETTE, February, 1936, page 211). The supplementary lists of accidents, not reported in time for inclusion in the reports covering the periods in which they occurred, contains 37 fatalities for the first three quarters of 1936, and 4 fatalities for 1935.

In this series of reports it is the custom to record industrial accidents under the dates of their occurrence and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Provincial Workmen's Compensation Boards, from the Board of Railway Commissioners of Canada, from certain other official sources and from the correspondents of the LABOUR GAZETTE. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the fourth quarter of 1936 were as follows: agriculture, 27; logging, 32; fishing and trapping, 16; mining, non-ferrous smelting and quarrying, 41; manufacturing, 24; construction, 30; electric light and power, 3; transportation and public utilities, 94; trade, 9; service, 11.

Of the mining accidents, 32 were in "metalliferous mining," 7 in "coal mining," and 2 in "structural materials."

Of the accidents in manufacturing, 1 was in "animal foods," 1 in "textiles and clothing," 7 in "saw and planing mill products," 2 in "wood products," 5 in "pulp, paper and paper products," 5 in "iron, steel and products," 1 in "non-ferrous metal products," and 2 in "non-metallic mineral products."

In construction there were 13 fatalities in "buildings and structures," 2 in "railway contruction," 3 in "shipbuilding," 8 in "highway and bridge," and 4 in "miscellaneous construction."

In transportation and public utilities, there were 23 fatalities in "steam railways," 3 in "street and electric railways," 55 in "water transportation," 2 in "air transportation," and 11 in "local transportation."

In trade there were 6 fatalities in "wholesale," and 3 in "retail."

Of the accidents in service, 5 were in "public administration," 1 in "laundering, dyeing and cleaning," 3 in "personal, domestic and business," and 2 in "professional establishments."

There was one serious disaster during the period under review, which occurred on October 17, when a sandsucker foundered and sank in a storm on Lake Erie, Ontario, and 18 members of the crew were drowned. Findings of a special commission which was appointed to inquire into the cause of the tragedy disclosed that the loss of the vessel was due "to shifting of her cargo of sand caused by the incursion of water through her open hoppers into the hopper space, which condition became aggravated by the continued admission of water to her hoppers and possibly in her special buoyancy space, and finally resulted in her foundering." While the cause of the vessel sinking so rapidly after her cargo took a sudden list and she turned over on her side, remains in doubt, the responsibility for the loss of life was charged to the first and second officers who perished with the ship. They failed, the commission found, in not being sufficiently alert in obeying the master's orders to get the life boats out and the crew aboard. The captain, one of the seven survivors, as well as all other members of the crew, were exonerated from blame. The commission added however that the captain was open to censure for failing to have life boat drill aboard the vessel, and in permitting an unauthorized person, the first mate's wife, to be aboard.

While making its last run of the season, a motorship foundered and sank in a storm on Georgian Bay, Ontario, on November 21, and seven members of the crew were drowned. Ten survivors reached shore on rafts which they threw clear before leaving the ship. An inquiry was ordered, but no further explanation of the disaster has been received in the Department to date.

When a tug sank on November 13, on Lake Huron, Ontario, the whole crew of five were drowned. This accident is believed to have been caused by a boiler explosion.

Other accidents resulting in the loss of two or more lives were as follows:

Three fishermen were asphyxiated from exhaust fumes in a boat off Galiano Island, British Columbia, on October 23.

Three miners were killed when they fell 200 feet down a shaft when a platform collapsed as their drill went out of control, at Kirkland Lake, Ontario, on November 4.

Two loggers lost their lives in a fire that destroyed their camp at Red Pine Lake, Ontario, on October 29. Two fishermen were drowned when a dory capsized, off Lunenburg, Nova Scotia, about December 15; and two trappers were drowned from a canoe, on Lake Deschambault, Saskatchewan, about November 5.

Two miners lost their lives at Eustis, Quebec, on October 7, when buried under an avalanche of ore; and two timbermen were killed by a fall of rock following blasting in a mine at Kirkland Lake, Ontario, on December 9.

Two carpenters lost their lives at Trenton, Ontario, on October 29, when crushed under a falling wall blown down by a cyclonic wind.

An engineer and fireman were killed near Forgan, Saskatchewan, on October 21, when their train hit a steer and was derailed. Another derailment was caused when a train hit a sink hole near Scoville, Ontario, on October 24, and an engineer and a fireman lost their lives.

A motorboat owner and his helper lost their lives when a motorboat was destroyed by fire following an explosion, on Lake Erie, on November 15.

Supplementary Lists of Accidents

A supplementary list of accidents occurring during the first three quarters of 1936 has been compiled which contains 37 fatalities, of which 9 were logging, 1 in fishing and trapping, 6 in mining, non-ferrous smelting and quarrying, 7 in manufacturing, 6 in construction, 1 in electric light and power, 1 in transportation and public utilities, 1 in trade, 3 in service, and 2 unclassified. Three of these accidents occurred in January, 1 in February, 2 in March, 3 in April, 4 in May, 7 in June, 5 in July, 5 in August, and 7 in September.

A further supplementary list of accidents occurring in 1935 has been made. This includes 4 fatalities of which 1 was in logging, and 3 in trade. Two of these accidents occurred in May, 1 in October and 1 in December.

Governor Lehman of New York State in a message to the State Legislature on January 6, 1937, suggested that certain labour legislation be adopted. Among his recommendations to the Legislature were:

Prompt passage of a new minimum wage measure to meet objections advanced by the United States Supreme Court in invalidating the existing law, and, if necessary, changes in the State Constitution to govern minimum wage law regulation; ratification of the Federal child labour amendment; regulation of hours and working conditions of hotel workers; regulation by the State of private detective agencies supplying strike breakers and industrial "spies"; legislation providing a penalty for "pay-envelope coercion"; State regulation of private employment agencies. Other recommendations dealt with social security, unemployment relief, slum clearance and housing, mortgage financing, etc.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Judgment of Superior Court Affirmed in Action under Collective Labour Agreements Extension Act

In the Labour Gazette for February, 1936, p. 213, a summary was given of the judgment of Mr. Justice Chase-Casgrain on October 15, 1935, in the Superior Court of Montreal, in an action brought under the Collective Labour Agreements Extension Act of Quebec by a painter for wages in excess of what he had received and alleged due under the agreement between the building trades council and the Montreal Builders' Exchange, Inc. Under the authority of the Act on collective agreements, this agreement had been extended and made binding on all employers and workers in the building industry. The plaintiff had been paid at the rate of 30 cents an hour whereas the rate fixed in the agreement was 60 cents.

The question on which the case turned was whether, under the statute, an agreement between workers and employers in an industry could be extended to bind an employer who was not engaged in that industry, even if the workman was employed at a trade covered by the agreement. The employer in the case before the court was a company managing office buildings. Mr. Justice Chase-Casgrain held that the agreement did not apply to such an employer and, under the Act, could not be made to apply.

On appeal to the Court of King's Bench this judgment was upheld on December 22, 1936. Mr. Justice St-Germain, with whom Mr. Justice Galipeault and Mr. Justice Barclay concurred, pointed out that there were two questions before the Court: (1) is the Collective Labour Agreements Extension Act applicable only to an employer in industry or is it applicable to any employer whatsoever? (2) if the law is to be applied only to an industrial employer, is the defendant company an employer in the building industry? As to the first question, the court held that section 2 of the Act which enabled an agreement to be extended to "bind all the employees and employers in the same trade or industry" within the district meant that only employers in industry could be legally bound. Other sections of the Act appeared to the Court to support this opinion that the terms of an agreement could be extended only to workmen and employers in the same industry as those who had signed the original agreement. For example, Article 7 of the Act, which provides for a joint committee of the parties to the agreement, stipulates that the Minister of Labour may add two members to the committee to represent "the employers or employed not parties to the agreement" but evidently persons engaged in the same industry. The Legislature had provided that employers and workers who had not signed the agreement should be represented on the committee because they were bound by it when it was extended by Order in Council under the Act.

Counsel for the plaintiff argued that Article 6 of the Act supported the plaintiff's claim that his wage-rate was to be determined by the agreement. Article 6, as enacted in 1934, stipulated, in part, that the provisions of a collective labour agreement made obligatory shall govern all the individual labour contracts in connection with the trade or industry contemplated by the agreement. The individual contracts of employment referred to in this article, ran the argument, included any contract between any workman in the trade or industry contemplated by the agreement and any employer whether the latter was engaged in "industry" or not. Mr. Justice St-Germain considered this argument unsound, since the words "individual contracts of employment" in the section were in contrast to the words "collective labour agreement" in the same section and referred only to contracts between a workman and employer in the industry affected by the agreement.

As to the second question concerning the employing company in relation to the building industry, the court was of the opinion that the defendant company could not be considered as engaged in the building industry. An employer in the building industry is one who is regularly engaged in construction and, incidentally, in renovation or demolition of buildings.

Mr. Justice Bernier dealt with the defendant's contention that the plaintiff had been engaged as a utility man and not as a skilled painter. He reviewed the evidence and expressed agreement with the trial judge that the evidence showed that the plaintiff was hired as a painter. As regards the defendant company in relation to the collective agreement, he was of the opinion that an agreement could bind only employers engaged in a trade or industry in the ordinary sense of the law and in this case only an employer in the construction industry. He, therefore, agreed that the appeal should be dismissed with costs.

Mr. Justice Hall also concurred with Mr. Justice St-Germain as regards the applicability of the law to the defendant employer. Further, he considered that since the plaintiff

was neither a member of the painters' union at the time of his employment nor had obtained the certificate of qualification required where boards of examiners were set up under the Act he was not entitled, under the Act, to bring an action for wages fixed under its authority. For this reason, also, Mr. Justice Hall considered that the appeal should be dismissed.

Hodgkin v. Coristine Realties, Ld. (1937) 62 Rapports Judiciaries de Quebec, Cour du Banc du Roi 1.

Building Trades Agreement Held in Circuit Court to Apply to Employer who Builds House but is not a Builder by Profession

Another action for wages claimed due under the building trades agreement for Montreal as made legally binding under the Collective Labour Agreements Extension Act, was decided on November 7, 1936, in the Circuit Court by Chief Justice Archambault. The plaintiff, a building labourer, claimed wages for 373 hours at the rate of 35 cents an hour, or a total of $130.35. He alleged he had been paid only $71.

The defendant contended that he was not a contractor, that the plaintiff had received $75.35 in wages and that he had not worked 373 hours. It appeared from the evidence that the defendant was not a building contractor, that he had built a house for himself and for that purpose had hired a builder and all the labour necessary; that the plaintiff had worked 234 hours for which he had been paid $75.35, leaving a balance of $6.55 due him if the collective agreement governed his contract.

The question to be determined by the court, then, was whether the agreement applied to the defendant, who was not in the construction business but who had had a house built for himself.

The relevant sections of the Act are Articles 2 and 6. The former Article stipulates that the agreement shall "also bind all the employees and employers in the same trade...." while Article 6 provides that the provisions of a collective labour agreement....govern all the individual labour contracts in connection with the trade...contemplated by the agreement."

In the opinion of the court, the word "employer," taken by itself, does not mean only a person whose regular business it is to employ others or one who makes a profit out of the work of employees but in Article 2 the word might have the restricted meaning of an employer in an industry. In which case, under Article 2, only employees engaged in industry are bound by the agreement. But the collective agreement is preparatory; it becomes effective through the individual contract and it is the latter which gives rise to the employee's right to a minimum wage and to the employer's obligation to pay it. On the other hand, Article 6 does not say, as Article 2 does, "bind all the employees and employers of the same trade," but, in the wording of the former Article, the "provisions of the collective agreement govern all the individual labour contracts in connection with the trade." The court proceeded as follows:

> It is sufficient for the agreement to be applicable that there is a labour contract and connection between the labour and the trade, it is not necessary that the contract be between employers and employees in the same trade; the labour contract has a two-fold connection with the trade if both parties are in the trade, but there is still a relation with the trade if only the employee is attached to it and the Article does not require more, we consider, in order that the collective agreement shall govern the individual contract. . . .
>
> If Article 6 does not extend the collective agreement to employers not engaged in the industry, it has no purpose and is futile, for Article 2 has already extended it to employers engaged in the industry.
>
> And unless the contract binds employers not engaged in the industry, the law fails in its purpose.
>
> Wages are a nerve centre in business, particularly in the building industry, and are an important factor in cost... If the landowner can build to better advantage by making only labour contracts with different building workers and with a builder, when necessary, than by making with the latter a contract for the whole undertaking, as has happened in this case, what owner will not follow this method? Very few; and then the collective agreement will be of little effect; we will go back to the conditions existing before; the purpose of the law will not be attained.
>
> The spirit and the purpose of this law is to obtain for the worker a wage sufficient for the needs of his family and it follows that the need is the same and the value of the work is the same whether the workman works for an employer engaged in the industry or for an employer not so engaged and the legislature could not wish to bind only the former... (translated)

It was then pointed out by the Court that Article 14a [14b] of the Act, as enacted in 1935, exempts from any collective agreement concerning the building industry workers employed regularly in the upkeep of churches, etc. None of the employers in these cases is engaged in the building industry. "If the law did not apply to them, it was not necessary to exempt them."

For the above reasons, the defendant was ordered to pay to the plaintiff the sum of $6.55 with interest and the costs of the action.
